64. It has been suggested by one witness that some of the schoolmasters, after having served a certain number of years, and having served with more than average credit, might be allowed to rank above the sergeant-major?—If they are to rank with non-commissioned officers they go into the sergeants' mess, and carry their seniority there. The combatant man must be the senior member of the mess. It would not do for the schoolmaster to come into the sergeants' mess and be the senior member there. To my mind the sergeant-major must be the man who must rule there.

65. That is to say, under all circumstances, independent of seniority of standing?—I think so. The sergeant-major is the head of the non-commissioned officers, and I would not put any man in the regiment in the rank of a non-commissioned officer above him.

66. (*Chairman.*) Would you have any objection, as a commanding officer, if the Council of Military Education were to require a certain number of hours to be set apart every day for school work, leaving to you the choice of the hours?—It would be very difficult to work it. For instance, at Aldershot, where there are a number of men gathered together, and where there is work of all sorts, fatigue, and digging, and trenching, it is difficult to get the men together; and if a man has been dragging about from half-past 5 in the morning till half-past 1 in the afternoon, if he has to turn out to school after that, I do not think that it will be desirable. Army schools.

67. Not even if it be reduced to these limits?—No. We have nearly as much work to do in the winter as in the summer.

68. But if it were to be arranged that a certain number of hours should be allotted in the fortnight,

Col. F. R. Elrington.

1 March 1870.

Army schools.

giving you the choice of allotting them, would you object to it? I speak with regard to the future?—I think that if you made it compulsory that a recruit joining should attend school until he had attained a rudimentary education, it would be sufficient. Having done that, I would let him go, and if he chose to go up to higher things I would make it voluntary after a certain point. I would teach him to read and write, and after that if he chose to work for a higher standard I would let him do so.

769. What would you do with the men who could never be taught to read and write?—I would let them alone.

770. A certain amount of latitude must be left?—Yes; you may teach all the recruits who come your net now to read and write, which would be great advantage to them. I would not teach the more than that. If a man of intelligence saw that certain field was opened up to him, he might wor for it; but I do not think that it would work sat factorily to compel him to do so.

771. At present there are two extra subject perhaps you would be of opinion that it would better to have no extra subjects as a qualification a first-class certificate?—Yes; you do not want teach the men too much.

The witness withdrew.

Lieut. D. Scotland.

Status of schoolmasters.

LIEUTENANT and ADJUTANT D. SCOTLAND, 7th Dragoon Guards, examined.

772. (*Chairman.*) You are adjutant of the 7th Dragoon Guards?—Yes.

773. Is there an army school attached to your regiment?—Yes.

774. And a schoolmaster?—Yes.

775. Did the schoolmaster come in under the new or under the old regulations?—Under the old regulations. We got him the other day; he is a transfer to us from the Royal Artillery. We lost our own schoolmaster, who went to the Royal Artillery, and we got a Mr. Walker from the Royal Artillery a few months ago.

776. Does he hold a warrant?—No, he is a second-class schoolmaster; he is not a warrant officer.

777. Have you had many opportunities of observing army schools in general?—I have. I have been adjutant for 15 or 16 years.

778. Do you think that any inconvenience would arise to the discipline of the regiment if rank were given to the army schoolmaster above that of the sergeant-major?—I do not think that there would. I do not see that it matters whether he remains as he is, or whether he holds rank above the sergeant-major. I do not see that the schoolmasters suffer in any way from their present position; nor do I think they would be bettered by having the rank of a warrant officer.

779. Would the sergeant-majors themselves feel it to be a grievance?—I do not think they would. They have nothing whatever to do with the schoolmaster; they only meet at the sergeants' mess.

780. Would it be an inconvenience if the schoolmaster on entering the mess had precedence given to him over the sergeant-major?—I think so. I think that the sergeant-major should be supreme.

781. On board ship, as a warrant officer, the schoolmaster would be entitled to better accommodation than the sergeant-major, or the other sergeants?—Yes, it is one of the great complaints of the schoolmasters, that they have not comfortable accommodation on board ship. It is not so in the Indian transports, in two of which I came home; the schoolmasters there have staff sergeants' quarters allotted to them, but as a rule the schoolmasters have very little better accommodation in the shape of quarters on board ship than the ordinary men of the regiment.

782. I rather gather it to be your opinion, that at all events, whenever the schoolmaster and the sergeant-major come into contact within the regiment, and outside the schoolroom, the sergeant-major should hold the higher rank?—I think so. I do not think that they really can ever come into collision. I once heard of a circumstance, namely, that the schoolmaster was required to attend the orderly room. The commanding officer wished to say something to him, and when the commanding officer had done with him, the sergeant-major gave the words "Right "about face," which humiliated the schoolmaster very much. I think that was wrong. I think the sergeant-major has nothing to do with the schoolmaster in a military point of view. The schoolmaster is merely there as a civilian, and I do not see how they can ever come into collision unless they are very ill-tempered men. I think that if the schoo master took precedence of the sergeant-major at t sergeants' mess, it would lead to difficulty.

783. So far as you have had an opportunity of o serving, do you think that the schoolmasters w have lately joined under the new regulations, are of satisfactory stamp?—I have only spoken to one them for about five or ten minutes and I can hard tell. The chief complaints of the schoolmasters a that they are very much humiliated by having to sh their necessaries once a quarter; that seems to ann them very much and I think it is quite unnec sary. They do not like to wear the chevrons on th arms, and they seem to think that they should st at 4*s.* a day, and rise in the same ratio as they now. As to quarters, I think that they ought alwa to have two rooms and a kitchen. If these adva tages were given to them, I do not see that th would have anything to complain of, and as far as knowledge goes, I do not think they would themsel complain.

784. Do you think that attendance at school ou to be made compulsory upon recruits?—No.

785. Do you think that after the men cease to recruits they should be compelled to attend school? Yes. That is a point which ought to be settled soon as possible, especially in cavalry regiments. T recruits in cavalry regiments are working from six the morning till six at night, and when sent to scho it is one of my most painful duties to have to rep mand or punish them for irregularities there. Th applies especially to the mounted corps. I think th attendance at school should be compulsory after year's service.

786. Would you render the possession of a secc and a first class certificate, a necessary preliminary subsequent promotion?—I would make a third-cl certificate for corporals and a second-class certific for sergeants, a *sine quâ non*. We have alw trouble with non-commissioned officers when they not well educated. Sometimes they are promot and they promise to get on with their education, a they very often fail. If they are educated bef they are promoted I think that it is better.

787. Would you have any objection to allowing t schoolmaster to give private lessons?—None wh ever. One of the complaints is that the schoolmast are prohibited from doing so; they think that t order depriving them of an opportunity of givi private tuition in the evening is an arbitrary o and I do not see why they should not do so.

788. With regard to the required standard of ed cation, you do not think that any difficulty would ar between the commanding officer and the schoolmast There might be, for instance, in a regiment a ve smart active man, who was very well fitted for t discharge of the practical duties of corporal or s geant, and whom the commanding officer might des to promote, but whose educational qualifications not quite come up to the standard required by t schoolmaster?—I think that then the commandi officer should come in and act himself; but I thi it would be wrong to promote uneducated men, e

ot for gallant service in the field. The commanding cer ought always to have the power of waiving second or third class certificate, if he found a man culated for the position, if he could read and write do a sum.

789. Do you think that a pretty good understanding w exists between the schoolmasters and the com- nding officers?—I think so.

790. The commanding officers do not regard them nuisances?—I have never seen it. I think that ey are a very useful body of men, and ought to be couraged in every way. At Aldershot they work ry hard; they go round and attend the penny read- gs, and they make themselves very useful; at least great many of them do so; I cannot speak to every ie.

791. They give lectures; I suppose that the lec- res are very unequal?—Yes; in our regiment we ve scarcely had any lectures. The most popular ings with the men seem to be the penny readings, pecially when they are mixed up with a little music tween; the men attend them in great numbers. he lectures are generally dry, even when they are lustrated by the magic lantern. I do not think that e men care very much for them, especially the oldiers, but if they were better educated no doubt ese lectures would be more appreciated.

792. Are you in favour of the maintenance of the tablishment at Hythe as a musketry school?—I do ot think that it is necessary.

793. You think that what is now taught at Hythe ight be taught in the regiment?—Easily, and etter.

794. You do not think that it is necessary that there hould exist an independent standard?—No. I think hat if the subaltern officers were well taught in the egiment they would turn out better men than if they ad been to Hythe. I have known young officers sent o Hythe who had only been a few months in the ser- ice, and after six weeks' or two months' training at he establishment they were turned out as musketry in- tructors, without knowing the first principles of drill; hey were perfectly at the mercy of the regiment. f subaltern officers were thoroughly grounded in he regiment in all these things for a year, and got olid instruction in their profession, and were passed on for six months to the musketry instructor, I am quite sure that they could take the duties. The adjutant's duties are much more onerous and volu- minous than those of a musketry instructor, and all the adjutants are trained in the regiment.

795. Do you know anything of the Hibernian School?—We have had some men from the Hiber- nian School, and some from the Duke of York's School.

796. What sort of lads have they proved themselves to be?—My experience leads me to speak very highly of them. We have now eight men who have come from the Duke of York's school, one of whom is the bandmaster, another the trumpet major, and they are all very well behaved except one, who is an excellent musician, and who has very great temptations. On the whole they are better educated than the average number of men whom we get.

797. Are you satisfied with the system under which the recreation rooms are maintained?—I think that they are working very well.

798. Have you any improvements to suggest re- garding them?—I think that we might have a few more games for those men who do not care about going to the canteen, and do not care very much about reading. At this moment, out of a strength of a little under 500, there are 200 members of the read- ing room, and the reading rooms are improving every year.

799. (*Lt.-Col. Chesney.*) The barracks are in the town?—Yes; and that, I suppose, is one of the reasons why the number of members is not so great as they were in Colchester. We had upwards of 300 members in Colchester; they are getting better every year. There are two distinct classes of men, namely, those who go to the canteen, and those who go to the reading room, and if the two places were put together the quiet readers would be disturbed by the neigh- bourhood of the canteen, and the men from the can- teen who had had a little too much to drink might come in and kick up a row; I think, therefore, the two rooms had much better be kept apart.

Lieut. D. Scotland.

1 March 1870.

Recreation rooms.

800. Returning to the subject of the rank in mess of the schoolmaster, are you not aware that it is pos- sible now to have a staff sergeant-major, who is nominally senior to the sergeant-major, but who would as a non-combatant be put under him?—I think it would be possible.

Status of schoolmasters.

801. At the officers' mess meetings you have fre- quently a non-combatant field officer who sits under the captain?—Yes, but the captain is responsible for discipline.

802. Is there any difficulty in that?—No difficulty whatever. The schoolmaster goes to the mess, but he is in no way connected with discipline; if he were a warrant officer, or a senior non-commissioned officer to the sergeant-major, he might not think that he had nothing to do with discipline, and he might presume and dictate to the sergeant-major. I, however, think that that would not occur.

803. There would practically be the same power of treating him as in the case of the senior non-com- batant officer at the officer's mess?—Yes. As a civil member of the mess I do not think that any bad results would follow. So far as I am acquainted with the schoolmasters they do do not seem to care much about the rank; they are very anxious that they should not be interfered with in any way whatever by a non-com- missioned officer.

804. Are not the elder schoolmasters badly off for quarters and allowances as compared with the posi- tion which, from their interest in the Readings, and similar amusements, they hold in garrison?—They are very badly off. An ordinary mechanic in London is very much better off than they are; they have only one room, and a kitchen, or something of that sort, none of them have bed-rooms.

805. A really competent schoolmaster, as, for instance, at Aldershot, appears in regard to such amusements to occupy a different position from that of a non-commissioned officer?—Quite a different position.

806. (*Maj.-Gen. Wilmot.*) Would it not be possible by orders to give to schoolmasters all the advantages of their position, such as quarters, and so on, without giving them superior rank?—It would. As far as I know I do not think that they care about rank at all, they do not wish to be interfered with by the non-commissioned officers, and I do not think that they ought to be.

807. I suppose that you think that it is most im- portant that the military element should be kept as a primary one in the army, that is to say, that the sergeant-major's position should be considered the highest one under the officer?—Yes.

808. But the coming in of the schoolmaster, giving him all the advantages without giving him rank above that of the sergeant-major, would not at all interfere with that?—Quite so. A schoolmaster should be like a clergyman.

809. (*Sir D. A. Cameron.*) You have said that every schoolmaster should have two rooms and a kitchen. Has every officer two rooms and a kitchen?—No. If a single officer has a room and a little closet, or two closets, as they have at Colchester and in Ireland, I do not see that any subaltern requires more.

810. And the same remark would apply to an unmarried schoolmaster?—Yes, if he is a member of the mess. I only speak as regards the married schoolmasters.

811. Have you any difficulty in finding soldiers sufficiently educated to be promoted to the rank of corporal?—I have found some difficulties. As to men who were smart and fitted in every way for pro- motion, we have been obliged to keep them back,

Army schools.

Lieut. D. Scotland.

1 March 1870.

Army schools.

and to educate them. I have generally given them a paragraph of the Queen's Regulations to write from dictation, and arithmetic, and so on, and I have had to keep them back until they knew that.

812. In your regiment you do not require a soldier to attend school after he has joined the ranks?—No.

813. You cannot do so in fact?—We cannot.

814. Do any of the recruits join the ranks without being able to read and write?—Men who were unable to read and write on joining the regiment can just write their names after being six or nine months at school.

815. They do not benefit by their instruction?—Very little. In the cavalry regiments the necessity for attending school is a great drawback, and I should be glad to see it done away with. Only yesterday afternoon I had a report of two lads who had been inattentive at school, but I could hardly admonish or punish them, because they have so much to do at their drills and stable duties.

816. Do you think that men after they are recruits should be compelled to attend school?—Yes, in their second year's service, or until they get a third-class certificate.

817. (*Mr. Parker.*) You think that the second year's service is the best time for compulsory attendance?—Yes, as many recruits do not get through their drill much under a year; some men who learn to ride very quickly get through it in nine months; but, as a rule, I would confine it to the second year's service.

818. In the second year's service would they have time for regular attendance?—They could attend from two to four in the afternoon, four days a week, except on field days at Aldershot, or the Curragh, or Dublin, in the drill season; but I should think that at every other place in the kingdom they could attend four times a week throughout the year.

819. Do they now attend?—We do not compel them to attend and we cannot get them to go.

820. Probably one year's regular attendance would be much better than an irregular attendance?—Yes; the recruits are so tired out during the time that they are recruits that they go away from it at once.

821. Therefore you would recommend that they should not be compelled to attend as recruits, but should be compelled to attend in the second year?—Yes, or until they obtained a third-class certificate.

822. Could you require that from all?—Perhaps you could not expect a very illiterate man to get up to a third-class cerificate, but every man should be able to read and write and to do certain sums, and of course a non-commissioned officer should have a certificate.

823. Would you make that an indispensable qualification for non-commissioned officers?—Yes; except that a commanding officer might be allowed to make an exception in the case of a man whom he found in every way fitted but who had not the necessary education, and also for gallant service in the field.

824. Have you any special classes in your regiment?—No; only for recruits.

825. Do you know whether there are special classes in any cavalry regiment?—I believe that there are, but I cannot speak with certainty.

826. (*Dr. Butler.*) It has been stated to us that education in the army generally has fallen off since the Crimean war; do you agree in that opinion?—No.

827. You think that it has improved?—Yes.

828. Do you think that that improvement has been in consequence of any improvement in the quality of the teachers?—Yes.

829. You think that the teachers generally have improved?—Yes; I think that the normal teachers are a great improvement upon the old sergeants.

830. It has also been stated that the schoolmasters, as a body, within the last eight or ten years have not been quite equal to what they were before some important regulations were changed?—I do not think that they are quite so good. As regards the first of those who came out some 18 years ago, there was a Mr. Barnes who was a schoolmaster at Ballincollig, and there was a Mr. Belling who is now one of the superintending schoolmasters at Aldershot. I think that they are above the class of men whom we can now get,

831. Can you assign any definite cause for that?—I cannot.

832. You have spoken of some dissatisfaction amongst the schoolmasters; do you think that that is wide spread and of long standing?—I do not think so. I think that they have begun to complain since they have been obliged to show their necessaries, and they are very angry about being obliged to put the badges on their arms.

833. Then you think that a few changes in comparatively unimportant details of that kind might remove the dissatisfaction?—Yes. I do not think that they run much after rank; they wish particularly not to be interfered with by the sergeant-major. The married schoolmasters require two rooms, and they would like to start upon 4*s.* a day.

834. Are the unmarried schoolmasters compelled to mess with the sergeants?—We have never had an unmarried schoolmaster attached to our regiment. I do not know that they are compelled to do so. The commanding officer I think could compel them, but to my knowledge it has never been put to the test. I know that the single men do mess with the sergeants.

835. Do you think that it would ever be likely to happen that a reasonable schoolmaster might distinctly object to being obliged to mess with the sergeants, on the ground that they were men of a decidedly inferior education to himself, or do you think that it would only be a fastidious and unreasonable man who would do so?—I think that it would only be a fastidious and unreasonable man who would do so. I think that the society of the sergeants is quite good enough for the schoolmaster. The comforts of the mess and all the advantages which they have are a great deal better than the schoolmaster could get elsewhere, and he also would be a great acquisition to the mess.

836. Then you do not think that there is any great social and intellectual difference between the sergeant-major and the schoolmaster?—No; our own sergeant-major is a much more highly educated man than any of the present schoolmasters that I have seen.

837. Would you desire that the schoolmasters who come in should come from the army or from civilians?—I have never thought of that point. I do not see why the non-commissioned officers of the army should not have the advantage of those appointments. I think that they might be trained and have those appointments.

838. Are you aware that very few men now apply from the army for such positions?—Yes. In our own regiment we have scarcely anybody who ever applies.

839. Perhaps that is attributable to the discontent of a recent period of which you have spoken?—I cannot say.

840. Have you had any opportunity of seeing how the schools for the boys are conducted?—Yes.

841. Are you satisfied with them?—Yes; I think that they are very nicely conducted.

842. Do you think that the moral influences by which they are surrounded are favourable?—No, altogether. They hear a great deal of bad language, but they must live in barracks, and I do not think that in a moral and religious point of view they can be better provided for.

843. Has any means ever occurred to you by which they might to some extent be removed from hearing such language?—I do not see how it could be done.

844. The boys, in fact, see a great deal of the soldiers?—They do.

845. Do you think that they are kept at work for the right number of hours in the day?—I think that the boys should be kept on from 2 to 4 in the

ernoon, instead of until 3, but there is the diffi-
y that the room is required for the accommodation
he men.

146. If the teaching staff was somewhat larger,
think that they might with advantage have a
newhat longer time for teaching?—Yes.

147. Do you think that the religious part of the
truction is satisfactorily given?—There is room
improvement.

148. Can you point out definitely in what respect?
cannot say definitely. In our own regiment we
ve a Sunday school, which is very regularly con-
ted, but I have never been able to be present in
morning when the religious instruction has been
en, except once in a way. I, however, think that
schoolmaster should use his influence with the
ildren more strongly in a religious point of view,
t of course if he is not himself inclined that way
cannot do it.

849. Do you think that the infant schools work
ll?—Yes. I have seen none but our own and one
Shorncliffe, and they work very well. We have
present a third-class schoolmistress attached to our
hool, and she works very well.

850. She is under your inspection?—Yes; I visit
r school about once a week. It is a very necessary
ing for the sake of the children; they get away
m their parents for four or five hours in the day,
d they are taught sewing and knitting.

851. If the colonel is married, I suppose that his
ife would not unfrequently visit the school?—
ist so.

852. If he is not married, would the school ever
ceive visits from ladies?—Yes.

853. Who would they be?—The wives of the
ficers. If the colonel is a single man, he generally
ks some lady to go there, and it is, I know, so done
our own regiment.

854. (*Sir D. A. Cameron.*) Is there any attempt
teach boys trades?—Not until they leave school.
here is one boy now learning shoeing, and one in
e armourer's shop, and there was another in the
dler's shop.

855. What is his age?—Fifteen. The parents
ok the boy away from the sadler's shop for some
ason or another.

856. (*Maj.-Gen. Wilmot.*) Is anything done in
e way of teaching trades?—We endeavour to train
r own farriers; we have eight or ten men in ad-
ition to the farriers and shoeing smiths, who go to
e shoeing shop to learn to shoe horses. Then some-
mes we have a man in the sadler's shop, in addition
the regular sadlers, and also in the armourer's shop; we have a man there who knew something about it before he joined the army.

Lieut. D. Scotland.

1 March 1870.

857. (*Sir D. A. Cameron.*) Do the boys practice gymnastics?—Yes, but it is voluntary.

858. (*Chairman.*) Do you think that there would be any objection to having certain hours set apart for school in the afternoon?—I think not, except as regards Aldershot, and the Curragh, and Dublin in the drill season.

Army schools.

859. But I suppose that under any circumstances it would be desirable to leave the commanding officer the choice of the hours?—Yes; a cavalry soldier ought to attend school between 2 and 4.

860. If the Council of Military Education desired that a certain number of hours should be devoted to school, there would be no objection to it on the part of the commanding officers?—I think not.

861. Perhaps it might be equally convenient if an order as to a certain number of hours being set apart for attendance at school were issued by the Council of Military Education, and if the subsequent arrangement of those hours were left to the officer in command?—I think that the officer in command should have the arrangement, and if it was an inconvenient one, the General would have the opportunity of pointing it out; but I think that it ought to be left in the hands of the commanding officer.

862. Are you satisfied with the mode in which musketry instruction is carried on by the musketry instructors attached to the regiments?—It answers very well at present in the cavalry, but I see no reason why the regiments should not train their own musketry instructors.

Musketry instruction.

863. I refer to the manner in which the present musketry instructors discharge their duties?—They appear to do so satisfactorily. We have no regular musketry instructor at present attached to the regiment; we have an officer who has passed through Hythe, who conducts the musketry instruction for a year.

864. And that is done to your satisfaction?—It is.

865. Do you know anything of the lectures which are given by musketry instructors?—I have attended them, and for one year I conducted the musketry instruction myself. The adjutants of cavalry in 1865 and 1866, were ordered to do so, and I was obliged to work up the subject and to give lectures upon it. I think that the lectures are very useful, except the lecturers stick too drily to the book, and then the soldiers do not value them.

866. Do the lecturers generally do it pretty well?—I think that they do as a rule.

The witness withdrew.

REGIMENTAL SERGEANT-MAJOR ANDREW MORETON, Inniskilling Dragoons, examined.

Regimental Sergt.-Major A. Moreton.

867. (*Chairman.*) You are sergeant-major of the nniskilling Dragoons?—Yes.

868. How long have you been sergeant-major?—ight years. I have been 17 years a non-commis-ioned officer.

Status of schoolmasters.

869. When you joined the regiment had you occa-ion to enter the school?—No.

870. There is a school attached to your regiment, s there not?—Yes.

871. Is it well conducted?—Very well.

872. Has the schoolmaster entered the service recently, or is he an old schoolmaster?—He was in he Normal school; he has very recently had his pay ncreased to 4*s.* a day, therefore I do not know whether e is old or new.

873. Does he hold a Queen's warrant?—No, he loes not hold warrant rank.

874. You are aware that there are a certain number of schoolmasters in the army who hold warrant rank?—I have heard of them, but I have never met any of them.

875. Should you, as sergeant-major of your regi-ment, consider it undesirable that a schoolmaster should hold that rank, which would be a rank superior to your own?—I consider that the present regimental rank of a schoolmaster is sufficiently good to secure a satisfactory class of candidates for the appointment; but in consideration of no promotion being open to the schoolmaster, I certainly think that after 8 or 10 years' service warrant rank might be extended to him.

876. Does the schoolmaster ever mess with you?—He is a married man, but he frequents the mess.

877. Supposing that he held a warrant, such as we have alluded to, and possessed warrant rank, would that render his position at the mess at all anomalous?—He would be excluded from the mess if he had warrant rank. Warrant officers do not associate with non-commissioned officers; they are above them, and therefore they would not be entitled to come into the sergeants' mess.

878. And I suppose that a difficulty might arise if any alteration were made in that arrangement?—No difficulty would arise, because, as it is, schoolmasters are almost a separate class of men, excepting in the case of single men.

879. If a single man holding a warrant, and there-

Regimental Sergt.-Major A. Moreton.

1 March 1870.

fore holding rank above the sergeant-major, were to be admitted to the mess, might not some inconvenience arise?—There might occasionally be an inconvenience.

Status of schoolmasters.

880. That is to say, unless it could be clearly understood that so long as that schoolmaster was in the mess, the sergeant-major was the person who was in command?—Yes; with that understanding it would be just the same as it is at the present time.

881. Practically, I suppose that the schoolmasters and the sergeant-majors hardly come into contact?—Very seldom indeed.

882. And there would be no jealousy?—None whatever.

883. Even though warrant rank were given to the schoolmaster?—Just so; there would be no jealousy whatever.

884. Their occupations are so entirely distinct, that there would be no chance of any feeling of that kind?—Just so.

885. Are you a married man?—Yes.

Army schools.

886. Do your children attend the school?—I have no children.

887. Do you think that the married soldiers whose children attend the school are satisfied with the education which their children receive?—Yes; I know that they are.

888. Do you think that the school at all interferes with the drill of the recruit?—Yes; and therefore recruits in my regiment attend from 7 to 8 p.m., which does not, of course, interfere with their drill, but it now confines them to barracks as long as they are recruits; they could not attend at any other hour without interfering with either drills or stable duties. But many of these men on joining would be able to take a third-class certificate, whereas now they have to attend as long as the most uneducated.

889. Should you prefer that the recruit should not go to school until after he had learnt his drill?—Yes; especially in the cavalry, because in the cavalry they are very hardly worked.

890. Would you make it compulsory upon all soldiers to attend school?—Yes; until they had obtained a third-class certificate.

Status of schoolmasters.

891. Do you think that it is necessary or desirable that a schoolmaster's kit should be examined?—I do not think so.

892. (*Lt.-Col. Chesney.*) Supposing that you had in your mess, as a member, a staff clerk, with the nominal rank of sergeant-major, who was older as a sergeant-major than yourself, would that at all create a difficulty?—It would create no difficulty so long as the staff clerk kept to himself and did not interfere with the discipline of the regiment, but the moment that he tried to interfere in any way, of course, the sergeant-major and he would come into contact. He would only be an honorary member, and as such would have no voice in ruling the mess.

893. But if it was understood that the combatant sergeant-major was always to be president as the senior non-commissioned officer, would not that get over the difficulty?—Yes.

894. You do not see any difficulty in that rule being applied in the non-commissioned officers' mess?—No.

895. So long as a man was looked upon as a civilian, you would not care about his nominal rank?—No.

Army schools.

896. (*Sir D. A. Cameron.*) If all soldiers were compelled to go to school, do you think that it would deter young men from going into the service?—No; but in the cavalry the attendance at school could not be more than two days a week.

897. Even if a man had passed his drill?—Just so; there are only two days when he could attend school without neglecting his other work.

898. One of the witnesses has said that in the cavalry a man might attend school for four days a week; you do not think so?—I do not think so, if he paid attention to his other duties. I do not think it possible for a cavalry soldier to attend school more than twice a week for the following reasons:—During the drill season the regiment has to attend three five days a week, on neither of which days could he attend school without neglecting his horse or appointment; Guard would take him from school another day; the two days only could be available for his attendance at school; and even in the winter months the absence of men on furlough leaves spare horses, and the extra labour required to keep the horses and appointments clean would, in my opinion, prevent his attendance on more than two days weekly.

899. Then he would take a long time to qualify himself educationally if he only attended school for two days in a week?—Yes, unless he studied very hard.

900. (*Dr. Butler.*) Can you state whether the schoolmasters generally are looked up to in the regiment, or are rather looked down upon?—I will tell you candidly that they are not popular.

901. Why do you think that that is so?—I believe the reason is that they consider themselves altogether separated from the regiment and as not belonging to the regiment. Upon the old system, a sergeant of the regiment was the schoolmaster; but now a man is trained at a regular college and is attached to the regiment, and therefore a good many men do not like the schoolmaster.

902. Is it the impression among the men that the schoolmasters rather give themselves airs?—Yes; and that, I think, is the reason why they are not liked. I do not think that there is any other reason whatever, because the parents of the children who attend the school are very well satisfied with the manner in which they are taught.

903. As to the boys' schools, do the boys see a great deal of the men?—No, not during their school hours in the cavalry.

904. But at other times, do they move about freely among the men?—Yes.

905. Do you think that that is good for these young boys?—No; they pick up expressions which are not good for them to hear.

906. It is very hard to separate them in the barracks, but if some good system of separation could be arranged it would be advantageous for the boys?—Yes.

907. Does that apply to the little girls as well?—They do not mix among the men in the same way as the boys do.

908. How far do you think that the lectures are valued by the men?—The magic lantern lectures are not valued at all by the men, but they are valued by the boys.

909. They are thought rather childish by the men?—Yes; but the penny readings are very much appreciated by the men.

910. Are there other lectures, not of the magic lantern kind, which are valued by the men, as well as the penny readings?—Lectures on any military matters, I think, would interest the soldiers very much.

911. If a lecture is given by an officer, does it attract the men?—Whenever an officer attends the penny readings, the men pay great attention to him. When the Colonel himself comes and reads, the house is very full.

912. Does that happen in many regiments?—I do not know, but our colonel takes a great deal of interest in the matter and reads himself.

913. Do you think that the Sunday arrangements for school are good?—Yes, I think so, for the children.

914. (*Chairman.*) Is there any playground for the boys in the school, or any place where they can exercise themselves in gymnastics?—No, not at the present time.

915. How do they amuse themselves?—They just go out for the half hour which they have and amuse themselves; they just play about the barrack square, and that is the only playground which they have.

916. Are the children taught any trade?—No.

ept that the little girls are taught sewing, and t sort of thing.

17. I think that you have said that the men in r regiment are taught farriery and saddlery ?— ; but the men have a great deal of duty to attend The first duty of a man is to keep his horse well, to look after the saddlery, and so on ; and that s a great deal of time.

918. Could any man, except the farrier, make a horse-shoe?—Yes, the assistant farrier could do so.

919. Could any other man do it?—No.

920. (*Lt.-Col. Chesney.*) How many farriers have you?—We have 16.

921. (*Chairman.*) Could any man in your regiment shoe his own horse?—Yes, but it would not be safe.

Regimental Sergt.-Major A. Moreton.

1 March 1870.

Army schools.

The witness withdrew.

Regimental Sergeant-Major William McKay, 33rd Regiment, examined.

Regimental Sergt.-Major W. McKay.

Army schools.

22. (*Chairman.*) You are regimental sergeant-or of the 33rd ?—Yes.

23. How long have you been sergeant-major ?— hteen months.

24. How long have you been in the service?— hteen years and three months.

25. When you joined had you occasion to enter school?—Yes.

26. I suppose that you do not regret having done —No.

27. Do you think that it would be desirable to uire every man entering the army to pass through school?—Yes.

28. Would you pass him through the school while was still a recruit, or not until after he had learnt drill?—Not until after he had learnt his drill.

29. Did the schoolmaster who is attached to your iment come in under the old or under the new ulations?—Under the old regulations.

30. Does he hold a warrant?—No.

31. If he held a warrant he would take rank ve you?—Yes.

32. Do you think that that would be objection-e?—No; I think that as there is no provision de for the promotion of a schoolmaster it is not ectionable.

33. I suppose that you come so little in contact h the schoolmaster, that the fact of his holding t position would not create, either in your own nd or in the minds of the sergeant-majors of the ny, any feeling of jealousy?—In my opinion it uld not.

34. Is your schoolmaster a married man?—Yes.

35. Therefore he does not mess with you?—No.

36. If he were unmarried he would mess with u?—Yes.

37. And if he messed with you, and held a war-nt, he would become your superior officer?—Yes.

38. Might not that be objectionable as long as he s in the mess?—There is a president appointed look after the single serjeants' messing, and he kes precedence for the time being in the absence the sergeant-major.

39. You being present, and the schoolmaster also ing present, and the schoolmaster holding superior nk to you, it might create confusion in the mess ght it not?—Not if it was thoroughly understood at he was of superior rank.

40. I suppose that if he merely appeared in the ess as belonging to the non-combatant branch of the rvice, the fact of his rank being superior to that the sergeant-major would not interfere with the rgeant-major as the head of the mess?—No.

41. But it would be necessary that the sergeant-ajor should be the head of the mess?—Yes.

942 Are you a married man?—Yes.

943. Have you any children?—Yes, two.

944. Are they educated in the school?—The eldest is only three years and six months old.

945. I suppose that you intend to send your children to school?—Yes.

946. Have you any suggestion to make with respect to your school?—No.

947. You do not think that, looking to the interests of your children, the school could be made better for them?—I think that the present system works well.

948. Are you satisfied with the adult school?—Yes.

949. Do you think that a second-class certificate should be necessary to promotion?—I should say a third-class certificate for the first stripe, and a second-class certificate afterwards.

950. But would you have a third-class certificate required of every man who enters the army?—Of course that certificate would be necessary, and a second-class certificate would be necessary before further promotion, because in that case every man would be available for the first steps of promotion.

951. (*Dr. Butler.*) What is thought of the schoolmasters generally in the army? Are they liked, or not liked?—As a rule, I think that they are not very well liked, but I cannot give a reason for it.

952. Is it thought that they at all set themselves above others? Do you think that that may be the reason of their not being liked?—It may be so in some cases; but speaking of what I know of our own schoolmaster, I cannot say so.

953. Have you known many instances in which the schoolmaster and the non-commissioned officers, especially the sergeant-major, have not got on well together?—No such instance has come under my own special notice.

954. As to the boys' schools, do you think that the boys have sufficient work to keep them well occupied and out of misehief?—I think so.

955. You do not think that they are running about too much?—No.

956. Do you think that there would be any advantage if they mixed less with the men?—It is just possible that a little might be gained in that way, because the less that boys are among the men the better.

957. Have you noticed whether boys who are taught in the regimental school generally turn out well?—Yes, as a general rule they do.

958. Not many get into bad ways?—No; there are several boys in our band who have been taught in the regimental school, and they have all got certificates, and some of them first-class certificates.

The witness withdrew.

Lieutenant and Adjutant J. E. Christie, 42nd Royal Highlanders, examined.

Lieut. J. E. Christie.

Army schools.

959. (*Chairman.*) You are adjutant of the 42nd ighlanders?—Yes.

960. I suppose that there is a regimental school tached to your corps?—Yes.

961. Is it well attended?—It is very well attended.

962. Have you a good schoolmaster?—Yes; I ink highly of his attainments, and he is a very eady man.

963. Did he come in under the old Regulations or under the new ones?—I should say under the old Regulations, because he is a re-engaged schoolmaster.

964. Does he hold a warrant?—No, he is a second-class schoolmaster.

965. Can you tell us how many men are under instruction at this moment in the school of your regiment?—The average attendance is 100·51; a good many men are just now on furlough; this and the duties make the average appear small.

Lieut. J. E. Christie.

1 March 1870.

Army schools.

966. Would you render it compulsory upon every man to attend school on entering the service?—Yes; I would make it so after he was dismissed from drill.

967. You would defer sending the men to school until after they were dismissed from their drill?—Yes; a recruit, I think, has quite as much as he can do to learn his drill as a soldier, if he does it properly.

968. Would you make the promotion contingent upon certificates?—I do not approve of certificates at all.

969. Then what test of efficiency would you apply? I think that the emulation has fallen off since certificates have been introduced; for instance, now, a man who gets a third-class certificate imagines himself perfect to a certain degree, and he is content to rest without going any further; whereas formerly when the men had to satisfy the commanding officer as to their drill and other qualifications, they took more interest in it. I can instance a case—say that a man wishes to be promoted to be a corporal, from his having a third-class certificate he says "I have a third-class "certificate, and I can let education lie in abeyance, "and I have only to satisfy my commanding officer "as to drill and duty."

970. But it would be necessary to have some test of proficiency?—The men are always examined.

971. Does not that come to pretty much the same thing?—Yes; but I think that the fact of giving a man a certificate does not answer so well. It is the same thing with the officers; after they have passed the board they take it much more leisurely and easily than if they had not been examined at all. Formerly the commanding officer reported upon those whom he thought to be perfect, and I think that they were quite as efficient as they are now. I think that it is a great mistake even with officers to examine them by boards as at present.

972. Have you any experience of army schools out of your regiment?—I have been in several schools of other regiments.

973. What do you think of the army schoolmasters as a class?—With one exception my experience has been very good; I have found them very attentive to their duties.

Status of schoolmasters.

974. Do you think that it is desirable to improve their status at all?—No.

975. You are aware that at one time they held a warrant?—I am.

976. You do not think that it would be advisable to revert to that system?—I do not; the schoolmaster of my own regiment at the present moment is in the receipt of better pay than an ensign, and of course in respect of pay he is very much ahead of the serjeant-major, and speaking of his literary attainments, I should say that the serjeant-major is quite equal to him.

977. I suppose that the sergeant-major and the schoolmaster hardly come into contact?—They hardly come into contact; they get on very well indeed.

978. Giving rank to one over the other would be a greater advantage to the one to whom that rank was given than a disadvantage to the other?—I should say that it would be a disadvantage to the service, unless the schoolmaster was an officer. If he was an officer of the regiment, or was an officer attached doing duty with the regiment, it would answer very well; but if you made the schoolmaster a warrant officer, you would put him between the sergeant-major and the officers of the regiment, whereas at present the sergeant-major is the person immediately below the officers. I have also noticed, particularly in India, that one or two warrant officers generated a bad feeling in regiments on account of their having that higher social position. In my own regiment I have always found that the duties of the schoolmaster were very well carried on by a sergeant of the regiment when there was no schoolmaster.

Army schools.

979. Are you satisfied with the children's schools?—Very much so. We have an excellent schoolmistress.

980. Is she a married woman?—She is the wife of the schoolmaster.

981. Do you think that it would be possible to teach the children any trade during their school hours?—Yes; you could teach them shoemaking or tailoring. We have now been very nearly two years home from India, and since we have been home two boys were sent to learn tailoring, but in a short time they expressed their desire to enlist, and they have enlisted. We have not many children in the regiment; up to the date of our coming home very few of the men were married.

982. How many grown children have you now in the school?—I cannot state the exact number, but I think only about 24 or 25.

983. Including the very little ones?—Yes. They are all taught industrial work, except the grown boys.

984. That is to say, sewing?—Yes; making nets and things of that sort.

985. All the children, boys as well as girls?—Yes, except the grown boys.

986. We have had it stated in evidence by the inspectors that the only industrial work is sewing?—There is the making of nets, which is much the same thing, and knitting.

987. Do you think that the inspection of the schools is good?—Yes.

988. Then on the whole you are very well satisfied with the condition of affairs, as regards both the status of the schoolmasters and the general management of the schools?—Very much so.

989. Do you think that a certain number of hours ought to be compulsorily set apart for teaching, and that the commanding officer should be directed to see that those hours are observed, the choice of the hours being left to the commanding officer?—That is a very good idea. In my own regiment it has always been done. During the time when we were in Edinburgh, after the spring inspection, the commanding officer, being desirous of giving the non-commissioned officers as much instruction as possible throughout the summer, had his parades and drills early in the morning, and drill at 10 o'clock, and at 2 o'clock for men who did not go to school, and for recruits. During the whole of last summer the hours were from 10 to 12 for non-commissioned officers only; and there was a great perceptible improvement at the commencement of the winter season, and there was no deterioration in the efficiency of the school, for the privates went there as usual from 2 to 4. Since we have been at Aldershot we have had the same thing in the afternoon, that is to say, every non-commissioned officer under the degree of a colour-sergeant is compelled to attend school until he gets a second-class certificate; and all men who attend the school are exempted from drill, provided that they are fit for the ranks, that is to say, that they are in second-class drill. The only time in which the recruits can go to school is from 12 to a quarter to 1, that is three-quarters of an hour daily, but the commanding officer thinks that that is too much for them.

990. Does the chaplain look at all after the school?—Yes; he is pretty often in the school.

991. Do the ladies of the regiment look after the school?—Yes, and the officers take the greatest interest in the schools. I have served under three commanding officers who have taken great interest in the schools.

992. Have you a special class?—Yes, an evening class.

993. Is it pretty well attended?—The average attendance is six, that is, of men who wish to get promoted; sometimes there are 13 or 14; but this class is voluntary.

994. (*Lt.-Col. Chesney.*) That is the average attendance out of how many on the school books?—I should say out of about 20. I cannot tell the number exactly, but I should say that about 20 are qualified for certificates who have not already been examined.

95. (*Chairman.*) Have you any suggestion to
e with regard to the lectures which are given?—
lectures which are given at present, I think, are
er lame. What would be interesting would be
ey could get any person to give lectures upon
ary tactics. I know that the men in my own
ment always take great interest in any field day,
any sham battle which takes place. If any person
d describe it after it has taken place it would be
ubject of great interest. They also take great
rest in fire-arms and those sort of things.

96. You think that if the lectures were upon prac-
subjects, or subjects relating to the soldier's pro-
ion, they would become more popular?—Yes. I
e also seen lectures very well attended on matters
uty. The better informed men do not care much
the magic lantern lectures; they are principally
those who are just commencing life.

97. Is the library well attended?—Yes, very well
nded, and the recreation room is always full.

98. Are you satisfied with the system under which
recreation room and the library are maintained?—
; I think that the arrangements of the recreation
n are perfect. The recreation room is almost in
very centre of the lines, as it ought to be, and it is
venient to everybody. The canteen, on the other
d, is a great way off, and I think that that is just
well. The commanding officer allows performances
ake place in the canteen, such as singing, and by
inists, and harpists, and that answers very well.
ve never heard of any abuse in that respect. The
ects which interest soldiers are, I think, military
ory, tactics, and all matters with regard to rifles;
y take great interest in shooting.

99. Did you pass through Hythe?—Yes; I passed
ith an extra first-class certificate.

000. Would you be inclined to retain Hythe?—
, on a certain scale, namely, to test the efficiency
re-arms and projectiles.

001. But do you think that musketry instruction
d be given in the regiment?—Yes.

002. Do you think that it would be better con-
ed in the regiment than at Hythe?—That is a
cult question to answer. Most persons are preju-
d against Hythe. I think that in every regiment
e ought to be the elements of instruction in mus-
y, sufficient so far as respects anything which
ers or non-commissioned officers may require. If
e was any regiment which had been on foreign
ice, which had not had those facilities, I think
it could be done quite as well by sending any
ers or non-commissioned officers to another
ment for instruction.

003. Have any of your men come from the Hiber-
n School, or the Duke of York's School?—Yes;

004. Do you give a good account of them?—Yes;
r writing is particularly good. One is a sergeant
he canteen, and the other is a corporal in the
d.

005. Do you think that the schoolmaster in your
iment is at all discontented?—No.

006. Do you think that his pay is sufficient?—I
nk that it is quite sufficient.

007. (*Lt.-Col. Chesney.*) You know that the
oolmaster begins at 3*s.* a day, and afterwards rises;
you think that that is sufficient?—Three shillings
ay is the pay of a regimental schoolmaster, and I
nk that it is quite sufficient. I have never heard
ny complaint about it. Of course I have not come
o contact with any schoolmasters of that grade, but
ould imagine that it could be easily obviated by
ing a sergeant or a corporal of the regiment to
ry on the duties of the school. If our schoolmaster
ppeared to-morrow, I think that the commanding
er could carry on the duties of the school quite as
l as at present.

008. In your regiment have you not made a prac-
of using certificates?—Yes. The certificates
ich have answered best are those not now in force.
1860 there were a first, a second, and a third class
certificate (quite a short certificate), signed by the commanding officer; and then it was made a regulation that a man should have a third-class certificate on passing from lance-corporal to corporal, a second-class certificate on passing to lance-sergeant, and a first-class certificate on passing to sergeant. My late commanding officer carried this out strictly, but he disapproved of certificates; he merely carried out the system, because he believed it to be the regulation of the service.

1009. Practically, is it necessary in time of peace ever to promote a man to his actual corporal's rank without rudimentary education?—Three instances have occurred since my return home, neither of those men had certificates, and neither of them wanted promotion, and yet they are known to be very superior non-commissioned officers. When we were quartered at Stirling, Perth, Dundee, and Aberfeldy, we had a scarcity of non-commissioned officers, and had to take privates to drill recruits. One private was very efficient, and so highly was the commanding officer pleased with his qualities in drilling that he made him a corporal on the spot, that was after drilling for eight or nine months. That man has been promoted to be sergeant; he is now provost-sergeant at Aldershot. If it had been left as a matter of education, the service would have been bereft of that man's services.

1010. As a rule, in your regiment you always insist upon education?—Yes, and two or three times lance-corporals have been promoted to be corporals, subject to their getting education, and satisfying the commanding officer that they were fit for the position. I have known none of them fail on promotion. With regard to lance-corporals, I think that insisting upon a preliminary education with them is not advantageous, because it deters a great many who are rather timid on first coming forward. I think that the best system of getting lance-corporals is by having them selected by their captains; those men naturally feel pleased at having been selected, and I think that they exert themselves in education or in any other way.

1011. Have they not usually time enough between getting the lance stripe and the other stripe to qualify for a third-class certificate?—I think so.

1012. What is your average time of a man being in the lance rank?—I should say from about 15 to 18 months. It is astonishing how well the young soldiers do if they take to a thing. A good many of them do very well if they are drawn out, the school frightens them, and responsibility of rank frightens them; but I think that the practice of selection for first promotion is by far the best plan.

1013. Do you see your way in an ordinary line regiment to obtain any kind of industrial teaching for the boys?—Quite well. For instance, if any of our boys were old enough they would be put now to learn tailoring; only two have done so since we came home from India. In India we had a great many workshops, such as tinsmiths and carpenters; boys were put to that out there by the late Colonel Priestley.

Recreation rooms.

1014. Do you find your present subscription of 2*d.* a man per day quite enough for your recreation room?—I think so.

1015. In your opinion do the recruits use the recreation room more than the old soldiers?—They do; and that is one of the reasons for having the recreation room away from the canteen.

1016. You think that it is rather an undesirable thing than not to put the recreation room side by side with the canteen?—Yes; because the distance between them keeps the recruits away from the canteen. If you had the recreation room close by the canteen, perhaps apart from being led into the canteen they would meet with the bad characters coming home from the canteen, and it is desirable to keep them away from the canteen as much as possible.

Army schools.

1017. With regard to the industrial grant for the infant school, do you think it possible that it should be considered by the married soldiers rather as a

Lieut. J. E. Christie.

1 March 1870.

Army schools.

means of clothing their children than of instructing them in sewing?—Quite possible.

1018. (*Maj.-Gen. Wilmot.*) Are there any other children in your school except the children of soldiers?—No, except that there were some who were attached.

1019. Then in the distribution of the work afterwards, it would be just as likely to be given to those children as to the children of your own regiment?—Yes.

1020. Do you see any objection to the schoolmasters giving private instruction out of school hours?—None at all. When we were in India at small stations some officers used to send their children at the regular hours to the school just the same as the other children were sent.

1021. And the officers paid so much a month for that; 5*s.* a month?—Yes, but it was rather an advantage to the children than otherwise; it improved their tone and everything. Where I was quartered in India the officers had no other means of educating their children; there were about five or six and they got on very well.

1022. How long has your schoolmaster been attached to your regiment?—About 18 months.

1023. Previously to the appointment of the present schoolmaster, had you one who was attached for any length of time?—In India we had a man of very good attainments; he was a very good teacher, but he had been sent out to India, I think, on account of his misconduct.

1024. As far as the schoolmaster has to teach, that is not a means by which his own education would be enhanced in any way, namely, by the particular fact of teaching?—No, not unless he followed literary pursuits in his own hours.

1025. There is nothing in his own school teaching which does so; he does not carry a class to a very advanced stage, so as to require him to keep up his own attainments?—No. We have many men in the regiment of high attainments with whom he can associate.

1026. Would not the circumstance of allowing the schoolmaster to give private lessons rather render him more *au fait*?—Yes, if the children who were attending were not very young.

1027. Would you permit that teaching to officers' children?—I would let the schoolmaster do anything which he liked in his own hours, so long as it did not interfere with his teaching.

1028. You do not think that what is required of the schoolmaster by the Government is so much that he cannot do anything else?—Certainly not; I do not think that the schoolmaster is a very hard worked man, and he gets almost any amount of assistance which he requires.

1029. (*Sir D. A. Cameron.*) Do any officers' children now attend school?—No; there is a school at Aldershot for officers' children.

1030. Do you think that it is desirable to mix up the children of officers with those of non-commissioned officers and soldiers?—No; abroad it cannot be helped, but at home I think that it is not desirable.

1031. With regard to the extra subjects, do many of the non-commissioned officers attend school when they are taught?—A few do.

1032. The schoolmasters complain of the regulation which requires them to show their kits periodically, is that regulation enforced in your regiment?—Yes.

1033. Does the schoolmaster ever complain of it?—No.

1034. Do the staff sergeants, or do any sergeants in the regiment, show their kits?—Yes; every sergeant in the company shows his kit, but not the staff sergeants.

1035. How often?—Once a month; that is a standing order in the regiment.

1036. And do the soldiers show their kits once a week?—Yes; the standing order is that every sergeant shall show his kit at least once a month. The schoolmaster in my regiment always comes to me and tells me when it is time to inspect his kit.

1037. He does not lay it down?—No; I go and look at it in his own quarters.

1038. He does not feel it degrading?—No; he only looks upon it as a point of duty. The schoolmaster always comes to me, and says, "It is such a day of the month, sir, will you come and inspect my kit," he reminds me of the date.

1039. Is his kit the same as that of a sergeant?—Not exactly. I cannot enumerate the articles, but I think that inspecting a schoolmaster's kit is a matter of very little importance. Of course there will be always one or two bad ones who will make away with their things, but I think that in the case of first and second class schoolmasters the inspection of kits might be dispensed with.

1040. A colour-sergeant does not show his kit, does he?—It depends upon the captain, some captains make him show it regularly.

1041. (*Maj.-Gen. Wilmot.*) How does the schoolmaster receive his pay?—From the paymaster.

1042. It is not in advance, is it?—Officers receive their pay in advance. I do not know whether the schoolmaster receives his pay in advance, or not; but I know that he receives his pay from the paymaster.

1043. (*Dr. Butler.*) I have gathered from some of the witnesses that the schoolmasters are no great favourites in the army generally; does your experience confirm that?—The schoolmaster whom we had in India was rather dissipated and of bad character, and it was necessary to put restrictions upon him in order to keep him up to the mark, and, of course, that would rather degrade him. But our present schoolmaster is very highly looked upon; he is a very well conducted man.

1044. If the schoolmaster is a well conducted man you do not think that he is looked down upon from anything in his position?—No; our schoolmaster is not looked down upon. I think that he is very much respected by the men in the regiment; and since he has been schoolmaster I do not remember his having been compelled to confine a man on account of misconduct.

1045. Turning to another subject, I wish to learn whether you think that the schools for the children of the soldiers are susceptible of any improvement; for example, whether arrangements could be made by which they would mix less with the men?—I think that there is no disadvantage from their mixing with the men.

1046. You do not fear that they are likely to pick up bad language?—No. You might go into a company's room at any moment, and you would very rarely hear a bad word made use of. If you go in the canteen, or anywhere, you will very rarely hear a strong word. All the commanding officers under whom I have served have been very particular in that respect, and I have known them to punish very severely those men who have been guilty of using bad language.

1047. (*Chairman.*) Have you any further observations to make in connection with the subject of army schools?—At most stations at home there are a great many unnecessary duties, such as sentries and orderlies. If those could be diminished in any way, the school efficiency would be a great deal increased. Putting men as sentries for nothing at all, I believe, makes them careless in the performance of their duty, and it takes them away from their school. I think that nothing is more objectionable than putting a man up as sentry without any particular object. The same remark applies to the number of orderlies.

1048. Have you anything further to say with regard to the school at Hythe?—Yes. I have already said that musketry instructors could qualify in the regiment as well as at Hythe. I think that the course might be very much modified without interfering with efficiency. I think that having a figure of merit is a mistake.

1049. Why?—One half the labour of the regi-

for the figure of merit. Make the commanding officer responsible for good shooting in the same manner that he is held responsible for everything else in his battalion. All his parades and drills should be so carried out that good shooting and steadiness may be thoroughly instilled into every one. At present there is too great a barrier between the musketry and the general training of the soldier.

Lieut. J. E. Christie.

1 March 1870.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Tuesday, 15th March 1870.

PRESENT:

THE RIGHT HONOURABLE LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LIEUT.-COL. SIR CHARLES RUSSELL, BART., V.C.
LIEUT.-GENERAL SIR D. A. CAMERON, K.C.B.
REV. DR. BUTLER.
MAJOR-GENERAL EARDLEY WILMOT.
C. S. PARKER, ESQ., M.P.
LIEUT.-COLONEL CHESNEY.

Mrs. C., Regimental Schoolmistress, examined.

Regimental Schoolmistress C.

15 March 1870.

Status of schoolmistresses.

1050. (*Chairman.*) How long have you been a schoolmistress in the army?—Since November 1856.

1051. Are you married?—Yes.

1052. What is your pay?—30*l.* a year as second class schoolmistress.

1053. Have you any other advantages?—None whatever as a married schoolmistress.

1054. Are you allowed any accommodation as schoolmistress of the regiment?—Not in addition to my husband's quarters; he is schoolmaster.

1055. You have nothing in addition to what you would be entitled to as the wife of a soldier?—Nothing whatever.

1056. Your husband is a schoolmaster?—Yes.

1057. Do you consider that your remuneration is less than what it should be?—Yes.

1058. If we were to ask you what you would call a fair and proper remuneration, what sum would you name?—I think that the lowest amount upon which a woman could exist, without anything being given by her friends, or any support from her husband, is 36*l.* a year. I do not think that she could live respectably upon less.

1059. That is to say, that if she was independent and unmarried, and without other means of support, 36*l.* a year would be just sufficient to keep her?—Yes. A single schoolmistress is entitled to quarters, or lodging allowance in lieu of quarters.

1060. What is the lodging allowance?—8*s.* 6*d.* a week.

1061. And that, I suppose, is ample, is it not?—Yes.

1062. It is a liberal allowance?—Yes, I think so. A married schoolmistress of course receives nothing in lieu of it.

1063. I see by the paper you have sent us that you are of opinion that at all events a schoolmistress should be entitled to better pay than a drummer?—I think so.

1064. Have you any other complaints to make with regard to your position?—My position as a married woman is regulated by that of my husband; yet as a schoolmistress I do not think that the position is what it should be. Schoolmistresses are not exactly women of the regiment. A married schoolmistress is returned as a woman of the regiment, and in travelling with the regiment is treated as such. By the old regulation, schoolmistresses were not classed as women of the regiment, and they were allowed second-class fare in travelling, both by sea and by land, but now they are not allowed that. A single schoolmistress is now allowed second class fare, but when she becomes married she loses that privilege.

1065. How is the wife of the sergeant-major classed?—That I do not know. I do not know whether any difference is made with the sergeant-major's wife.

1066. When you object to the class which is allowed to you, it is principally with reference to the railway ticket?—Yes; in travelling both by sea and by land.

1067. You object to the accommodation which is provided for you when you are travelling?—Yes.

1068. But in other respects the question of class hardly comes up at all, does it?—No.

1069. You say in the paper with which you have furnished us, that a pupil-teacher may be placed above the schoolmistress, and may receive advantages both in emolument and in treatment superior to those of the mistress who trained her. How does that happen?—It often happens that a girl comes from a school who has been monitress or pupil-teacher under the schoolmistress; and when she passes her examination and is appointed schoolmistress, she, in moving with the troops, would get a second-class passage by sea, whereas, if the schoolmistress were travelling at the same time she would only get the same treatment as a soldier's wife. If the other person were unmarried she would be provided by sea with a second-class cabin, but a married schoolmistress is not so treated.

Appendix, p. 116.

1070. Then you complain that a married schoolmistress is placed in a worse position than a single schoolmistress?—Yes.

1071. You served in India, did you not?—Yes, for nearly eight years.

1072. And there you thought that you were in a better position than in England?—Yes, under the old regulations.

1073. You also complain that the schoolmistresses are liable to be discharged without notice. Can a schoolmistress be absolutely sent away at the discretion of the authorities?—I believe so. I myself, on my return from India with the depôt of my regiment, was placed on the unemployed list from the day of my arrival. Had I been a widow my children and self would at once have been deprived of a home and support.

1074. And you received no pay?—I received no pay. My husband, applied for leave of absence on return from foreign service; it was granted to him, but refused to me. I was placed on the unemployed list, and it was stated to me that as I was not working, I was not entitled to receive pay.

1075. Was your husband ever a soldier?—No.

1076. Did he come in under the old regulations?—Yes.

1077. Does he hold a warrant?—No; he is a second-class schoolmaster.

1078. Then you have no pension and no allowance whatever?—After 12 years' service a schoolmistress is entitled to 1*s.* a day if she receives a medical certificate that she is unfit to continue; but otherwise not until 24 years' actual service is a schoolmistress entitled to any pension.

Regimental Schoolmistress C.

15 March 1870.

Status of schoolmistresses.

1079. After 24 years' actual service does she receive a higher pension?—Yes, 2*s.* a day.

1080. Have you any suggestion to make with regard to that part of the subject?—I think not.

1081. Do you think that those are reasonable regulations?—Those have always been the regulations as to a schoolmistress's pension.

1082. Do you think that it is too small a pension? I think that the pension is better than the pay as it now stands.

1083. You think that the pension is fairer than the pay?—Much fairer.

1084. What quarters do you now inhabit with your husband?—Two very small rooms at the end of the school; they are quite insufficient for our family.

1085. Have you any children?—I have five children.

1086. And you have only two rooms which are very small?—Yes.

1087. You have no kitchen?—No.

1088. (*Sir C. Russell.*) Do you cook in you sitting room?—Yes.

1089. (*Chairman.*) Is that generally the case in regard to the accommodation which is provided for married schoolmasters?—In some stations where there are special quarters they are better, but in Aldershot, where we are now, the quarters are in camp and are small, with the exception of the quarters of schoolmasters who are permanently stationed there, and in that case a piece of the schoolroom has been partitioned off, where more accommodation is required for their families.

1090. Do you think that you are worse off, as regards accommodation, than the wives of the sergeants are?—In camp I think that our quarters are worse than those of the staff sergeants.

Army schools.

1091. Passing from the consideration of your own position, I will ask you a few questions as regards the general management of the school. Are you satisfied with the general conditions under which the girls' school and the infants' school, which are under your charge, are conducted?—Yes.

1092. But you think that infants are sent to school a little too young?—Yes, in some regiments they are sent to school very young indeed, before they can speak or are able to sit quiet. A great many persons think that the infant school is a nursery, and a good many of the children can scarcely walk.

1093. But I suppose that even admitting that there may be some disadvantages, it must be a great convenience to the women of the regiment to be able to have a place to which they can send their children?—Yes, it is a great convenience. I do not think that any mistress would object to having children of their age, provided they would keep quiet, but when there are a great number of children, and when the majority of them are babies, the schoolmistress cannot carry on the work of the school, and keep it in order.

1094. Is not the infant school separate from the other schools?—Yes, from the master's school. Grown girls attend the master's school in the morning, and the mistress's school in the evening.

1095. What is the highest limit of age in the infant school?—The boys are kept until they are between 7 and 8, and the girls are kept until they can read words of two syllables.

1096. But your opinion is that if it was solely an infant school, children, no matter how young, might come there without inconvenience, but you think that the infant school receiving children almost of an age at which they would be called grown children, and also mere babies, would interfere with the work and order of the school?—Yes.

1097. You would leave it to the mistress to decide whether a child should be received or not?—Yes, before 3 years of age.

1098. Have you anything to say with respect to the monitresses and pupil-teachers?—Their pay is insufficient; the pay of a monitress is very small.

1099. You think that the grant of 5*s.* is too much if it is merely intended to supply materials for needlework?—A great deal too much.

1100. (*Lord E. Cecil.*) How long did you say that you had been in the service?—Since November 1856.

1101. Were you in the service when the schoolmistresses were treated differently from what they are now with regard to accommodation and privileges?—Yes. I believe that while I was in India the regulations were altered, but in India I was always allowed a second-class passage and privileges in travelling.

1102. Have you ever heard any reason assigned for the change which has taken place in the position of a schoolmistress?—No.

1103. In what way besides in respect of pay was the position of a schoolmistress in India superior to that of a schoolmistress in England?—In India she was not classed as a woman of the regiment.

1104. That is to say, I suppose, that she was looked upon as being superior to a sergeant's wife?—I think so, in respect to her calling as a teacher.

1105. Did she rank above a sergeant-major's wife?—I do not know. She was included quite in a separate list, as schoolmistress of the regiment. She was not included in any returns.

1106. Do you think that the army schoolmistresses generally, since you have been in the service, have physically deteriorated; do you think that they are as well up to their work as they were?—I think that they are.

1107. You do not think that the change in the regulations has brought in an inferior class of persons?—The schoolmistresses now, I think, are more soldiers' daughters than they were formerly. They do not, I believe, now train the mistresses. A monitress or a pupil-teacher, when she is 21 years of age, if she passes another examination, can be appointed as schoolmistress.

1108. But as far as you have been able to observe, the present schoolmistresses are quite as competent for their duties as the former ones were?—I think so.

1109. You say that "the treatment of schoolmis-
"tresses is so inconsiderate and illiberal as to lead, in
"your opinion, to an indifferent appreciation of the
"worth, duties, and calling of regimental teachers,
"both among parents and officers:" do you imply by that that there is less respect for a schoolmistress among the children and the parents than there was?—I think so. The depression in the regulations regarding treatment in travelling has had that effect. Of course the parents when they think that they are in exactly the same position in the regiment as ourselves are apt to think that they are not to assist us in many ways in which they might do so as regards the school work, such as the children coming in time, and so on. They consider that they are exactly the same as we are, and that they can do what they like, and they impose upon the schoolmistress. In the afternoon the great inconvenience is with the grown girls, who bring with them children who are not in the school at all.

1110. In fact the children are not so manageable as they were?—No.

1111. Speaking from your own experience, what is the proportion of schoolmistresses to children; how many assistants have you?—At present I have one monitress to assist me.

1112. How many children have you in your school?—I think about 40.

1113. Do you think that one monitress besides yourself is sufficient?—It is hardly sufficient, because in the morning school the children are supposed to be classified according to their attainments, and with one assistant I perhaps may be obliged to divide my school into four classes, besides the very young children who are only learning their letters; consequently they cannot all be kept at work at one time.

1114. You therefore incline to the opinion that the work is a little too severe for two persons?—Yes.

1115. What should you say was the number of children whom one schoolmistress could teach?—I

hink that 40 children could be taught by a mistress nd one other person, provided that there were not so nany classes; but the children vary very much in heir ability to read. I do not think 40 children too nany for two persons to teach.

1116. Are children who are outside the regiment llowed to come to the school?—The children of ensioners or of any one in government employ are llowed to come to it.

1117. Do you think that arrangement a good one?—Not always.

1118. What are your objections to it?—The parents o not send the children regularly to the school; they vill sometimes send them to the school for a few weeks nd will take them away again, and they will afterards return to the school. They have liberty to do hat; they have only to ask the permission of the colonel whether a child may attend, and with his consent they end the child, but they withdraw that child without ny notice, and after a week or two they send the child ack.

1119. Do you in consequence find those children ess industrious and less manageable?—I think so.

1120. (*Sir C. Russell.*) Do you think that the age f 8 years is too great until which to continue a child, ither a boy or a girl, in the infant school?—With ome children I think so; some children get on so nuch faster than others.

1121. What determines the period at which they re to leave you and to go to the master?—With the oys I believe that the age is between 7 and 8; but with the girls I do not know that there is any fixed ge. They are supposed to be kept in the infant chool until they can read words of two syllables asily; but I believe that a boy of 8 years of age vould be transferred to the master's school whether e could do so or not.

1122. Therefore, as I understand you, you have an ducational test for the girls, but a mere one of age as egards the boys?—I believe so.

1123. Has any scheme occurred to you by which hese very small infants could be attended to; because suppose that your knowledge of the regiment leads ou to believe that there is the greatest difficulty in getting the parents to manage and look after these nfants, and that therefore they are sent to the infant chool? Have you ever thought whether or not, by girls being appointed to take charge of these very oung children, they could be properly managed?—Yes, provided that there were a separate room for hem.

1124. But you must have a separate room for them?—Yes.

1125. Have you ever known a case of a married schoolmistress who was not the wife either of a schoolmaster or of a non-commissioned officer?—No.

1126. As a rule the married schoolmistresses are he wives either of schoolmasters or of non-commissioned officers?—As a rule they are either the wives of schoolmasters or of non-commissioned officers.

1127. (*Lt.-Col. Chesney.*) Are you aware that in a good many civil schools the mistresses are obliged to take children younger than they themselves would like to take, and that that is a common thing on account of the difficulty of separating them from their sisters?—I am not aware of that.

1128. Have you inquired as to the age at which children are admitted into any of the National Schools near to where you have been quartered?—I have not.

1129. Speaking of another subject, is there not a difficulty at present at many of the schools in getting a good pupil-teacher, in consequence of the insufficiency of the pay?—Yes; the pay is quite insufficient.

1130. So that they cannot actually get a decent girl of the requisite age?—No, not for the present pay.

1131. I see that you are strongly of opinion that the Saturday morning's school might be very well dispensed with, it being very irregularly attended?—Yes.

1132. Is it generally the case in other regiments that it is very irregularly attended?—I think that it is always the case.

1133. Are you obliged in your regiment to attend the Sunday school?—No.

1134. But you are liable to be required to attend it, are you not; and you could not refuse to do so, could you?—That is so.

1135. Have you often heard that mentioned as a condition which is rather hard on schoolmasters and schoolmistresses?—Yes.

1136. At most of the stations where you have been has it been found possible to manage the Sunday school without obliging the schoolmasters and schoolmistresses to attend?—Yes.

1137. (*Maj.-Gen. E. Wilmot.*) How many assistants have you?—I have one monitress.

1138. If you separated all the little children and sent them with that girl into another room, could you manage the others yourself?—No, not very well.

1139. But what you have complained of would be remedied by having another room?—Yes, a room for the infants only.

1140. That would be not only advantageous to you, but very much so to the children and to the service?—Yes.

1141. Having done so, would you not expect to get into the next school a very much improved class of scholars as far as its branch of knowledge went?—Yes.

1142. One teacher would be sufficient for an infant school of that sort, would it not?—Yes, for the younger children. One girl could manage them.

1143. (*Lt.-Col. Chesney.*) Do you lose the help of your monitress from time to time when she goes to be taught at another school?—Yes.

1144. Is she taken from you during your working hours?—Yes, she is taken away twice every morning during my working hours to be taught by the master.

1145. Supposing that she got no teaching by the master, would she be learning enough with you?—I think that it is advantageous to the monitress to go to the master.

1146. But to some extent it is hard upon you that that should be done during the working time in the infant school?—It is.

1147. You are left during some part of the morning without any one, as you have only one monitress?—Yes.

1148. (*Mr. Parker.*) If there were a separate nursery for the very small children, do you think that any young children would be sent there who were not sent to the school?—Yes.

1149. And that would be a convenience?—It would be a convenience to the women of the regiment, and it would be also an advantage to the schoolmistress, inasmuch as it would remove the very young children from the school.

1150. You would be able to teach the remaining children more efficiently?—Yes.

1151. Would there be much expense in appointing a person to take charge of such a nursery; what kind of person could be placed in charge; would you select a monitress?—A pupil-teacher or intelligent woman of the regiment.

1152. Do you think that she should have the same pay as for assisting you in the other school?—Yes; during school hours of course she could take the whole of the younger children into a separate school, and they would return home at 12 o'clock with their brothers and sisters.

1153. Then the only expense would be that of a monitress and that of an extra room?—I think so.

1154. You say that in India, civilian schoolmistresses have from four to six times the pay of army schoolmistresses?—Yes. Status of schoolmistresses.

1155. Have not the army schoolmistresses other advantages?—None whatever. The mistress of the infant Government school at Poonah, I believe, received 120 rupees a month, with a furnished house, and two native servants. My own pay in India was only 30 rupees per month and nothing else.

Regimental Schoolmistress C.

15 March 1870.

Status of schoolmistresses.

1156. Had you not quarters?—I had no extra quarters, but only the quarters to which my husband was entitled.

1157. Were the quarters of a married schoolmistress in India in your opinion sufficient?—There were generally two sets of quarters, one for the schoolmaster and one for the schoolmistress. If a schoolmistress was single she had exactly the same quarters as a schoolmaster.

1158. Did those quarters consist of two rooms?—In India sometimes there were two rooms and sometimes there were more.

1159. Has a single schoolmistress at home the same quarters as a married schoolmistress and her husband?—I think so, two rooms.

1160. A schoolmistress has no rations from the regiment?—None whatever.

1161. She is not even allowed to make an arrangement by which to have them?—I believe not.

1162. Would it be any convenience if it could be so arranged?—It would be a great convenience.

Army schools.

1163. (*Dr. Butler.*) Have the young children many opportunities of running about among the soldiers of the regiment?—I do not know that they have.

1164. Neither the little boys nor the little girls?—No, I do not notice them running about among them very much. Of course the play ground is usually in the barrack square.

1165. You do not think that any harm is likely to come to them from hearing bad language, for example, among the men?—They do not mix much with the men in the barrack square. Of course there are times when men are in the square, and when the children are not there; and I dare say that there are occasions when the two are there both together.

1166. Do you receive frequent visits to the school from the ladies of the regiment?—Not frequent visits, some of the ladies take an interest in the school, and visit it occasionally.

1167. And you find that valuable?—Yes. The parents think more of the school when they see the ladies take an interest in it.

1168. Do you see anything of the chaplain?—Not much, he does not come to the infant school.

1169. Do you say that he never comes to the infant school?—Yes.

1170. (*Lord de Ros.*) With regard to the proposed cessation of the school on the Saturday, your idea upon that matter is, I suppose, that the mothers would employ the girls in cleaning up and washing, and that such training would be rather of use to them than otherwise?—Yes.

1171. It would be of use to both parents and children?—Yes.

1172. You think that the Sunday, after all the labour of the week, should be entirely given up to the schoolmaster and the schoolmistress?—Yes.

1173. Do you see any possibility of any instruction in washing being given to children in the school?—I do not.

1174. As regards the work of the school, besides cutting out and sewing, is any instruction given in the common mending of the parents' clothes?—Every Friday the children are permitted to bring in useful work, but fancy work is not permitted, such work as knitting stockings, or darning, or mending, or anything like that may be brought.

1175. With regard to the children being exposed to hearing bad language, do you not think that there is in general a very right understanding among the men of the regiment to avoid using bad language before children?—I think so. I think that there ought to be. I do not think that the children in the neighbourhood of our own quarters would be likely to hear bad language.

1176. Do you not think that any respectable old soldier or sergeant hearing another man using bad language before children would be likely to check him?—I think so.

The witness withdrew.

Regimental Schoolmistress D.

Mrs. D., Regimental Schoolmistress, examined.

Status of schoolmistresses.

1177. (*Chairman.*) How long have you been a schoolmistress?—8½ years.

1178. Are you married?—No, I am a Crimean widow.

1179. Do you obtain lodging money?—No, I have not had it for six years. I had it at one time, when I lived out of barracks, but I have lived in quarters for the last six years, which I have instead of lodging money.

1180. Are you respectably lodged?—I am as respectably lodged as I can be at the station at which I am; there are a great many things to put up with there which we should not have in barracks; there are great discomforts.

1181. Have you any children?—Yes.

1182. You think that the salary which you receive is very insufficient?—Yes; if I had nothing else but the salary to depend upon I could not do, but I have a pension from the Crimean Fund.

1183. To what figure do you think that it would be fair to raise the salary?—I can hardly answer that question. I should like it to be raised, I think, to 36*l.*

1184. You think that a single woman could live respectably upon 36*l.*—Yes.

1185. Do you think that the monitresses are insufficiently paid?—Yes; I think that they are insufficiently paid.

1186. Are they of fair abilities?—Yes; sometimes we get them better than at other times. Some children have not regularly attended school, and at 9 or 10 years of age they are very backward, but the abilities of others, who have regularly attended school, are equal to that position at the age of 13.

1187. Do you think that the discouraging prospects in the way of pay, &c. prevent the monitresses from wishing to become schoolmistresses?—I do. I believe that in one or two instances the girls have resigned, even at Aldershot, on account of the small pay.

1188. When you are travelling do you travel by the third-class?—Sometimes I have travelled by the third-class, but generally speaking I have travelled by the second-class. I am allowed to travel by the second-class.

1189. That is as an unmarried schoolmistress?—Yes.

1190. But if you were a married schoolmistress you would have to travel by the third-class?—I do not know how the married schoolmistresses travel; I suppose that they travel with their husbands, but I am allowed to travel by the second-class, and all single schoolmistresses are allowed to travel by the second-class.

1191. Do you think that the schools are pretty well conducted?—Yes.

1192. And are you of opinion that the inspection is pretty satisfactory?—Yes.

1193. Does the commanding officer take an interest in your school and assist you?—Yes.

1194. Do the ladies of the regiment help you?—Yes.

1195. Does the chaplain come and look at the school?—He has not been to my school, and I do not think that he goes to the other schools; he gives religious instruction every Friday in one school where all the children are collected together.

1196. You think that babies are admitted too freely into the school?—Yes.

1197. If they did not go there what would their mothers do with them?—I do not know.

1198. I suppose that it is a great convenience to the mothers to be allowed to send them to the school?—Yes.

1199. But it is rather an obstruction in your way y increasing the number of younger children?— es, I have found it so. I have had a child in the chool as young as one year and eight months; of ourse children cannot be taught until they are four ears old.

1200. (*Lord de Ros.*) You would rather prefer the aturday to be a complete holiday?—Yes.

1201. Do you think that it would be any loss to he children, in useful training, that their mothers hould employ them in washing and domestic work n the Saturday?—It is only the young children, the abies, as I call them, who are sent on the Saturday. think that the elder children are required on Saturay for other purposes, such as assisting in the usual eekly cleaning of the house and furniture.

1202. Do you think that it would be at all possible o teach washing as a part of the school training?— o, there is no accommodation for it.

1203. Do you think that it would be possible to ave a separate infant school which should comprise he children below three years old?—I think that it ould be a very good thing in such a place as Alderhot, because the very little children are sometimes ubject to a great deal of danger in running out hen their mothers are away. I believe that at one me there was a nursery established for the young hildren, but I do not think that it is so now.

1204. Do you think that any harm arises from the hildren hearing bad language from the soldiers, do ot the soldiers rather avoid using bad language efore the children?—I am afraid not.

1205. (*Dr. Butler.*) You think that there is a erious danger arising from the children mixing with he soldiers?—I think so, because the children make se of bad language, and I suppose that they have owhere else to learn it.

1206. Are the little girls, as well as the little boys, ble to go about among the soldiers?—Yes; in the amp there is nothing to prevent their doing so.

1207. I suppose that the little children are rather ade pets of by the men?—The boys particularly are.

1208. (*Sir D. A. Cameron.*) Do you find that the ildren come to school clean, and decently dressed? -Yes, sometimes; of course if they do not come ean it is a great object with the schoolmistress to inst upon their doing so,—and we are obliged to inflict light punishment. Sometimes the mothers send em away clean, but they loiter on the way, and o not come clean.

1209. Are they obedient?—Yes, generally speaking.

1210. If they are not so to whom do you complain? -To the commanding officer.

1211. And not to the parents of the children?—No.

1212. (*Lt.-Col. Chesney.*) With regard to the atndance at the Sunday school, are you obliged to tend the Sunday school?—No.

1213. Are you not liable to be ordered to attend it? -I believe so, according to the late regulations. enerally speaking the officers' ladies assist.

1214. Then generally speaking there is no necessity r your attendance at the Sunday school?—No, not so r as I know.

1215. As regards the money grant for finding maerials, is it in your opinion too little, or too much, r the work?—It is too little to satisfy the minds f the parents, it has been a source of great annoyance to schoolmistresses in general. I have generally ndeavoured to avoid that difficulty by giving the hildren an equal number of articles; but the mothers re not satisfied, because they think that five shillings allowed for every child in the regiment, whereas it only for those children who are over four years of ge.

1216. That grant is looked upon by the parents as sort of fund for giving presents of clothes to the hildren?—Yes, but it is quite a mistake.

1217. Are you ever interfered with by the parents f the children; the non-commissioned officers' wives r instance?—I have not been interfered with, but I believe that other schoolmistresses have been. I have always avoided that as much as possible, so as not to give the commanding officer more trouble than it was necessary to give him.

1218. With respect to the pay of your monitresses, and pupil-teachers, have you now pupil-teachers or monitresses?—I had two monitresses until the last month, and one resigned, in fact she said that the salary did not keep her in boots, because Aldershot is very destructive to boots, and sometimes the monitress has to walk a long distance to and from the school.

1219. Do you think that you could get a good pupil-teacher to come to you at Aldershot on the present pay offered to such a person?—I do not think so.

1220. There is a regulation that your monitress should be taught by the schoolmaster?—Yes.

1221. Does that act against the interest of those who are in the grown school?—No, it has been arranged that during the time when the collective lessons are given by the schoolmistress in the gallery, the monitress shall go to the schoolmaster.

1222. You have not suffered from that order?—Not at all.

1223. (*Sir C. Russell.*) Have you ever applied to obtain your rations at the government rate?—I have.

1224. And were you refused?—Yes.

1225. You recommend that the hours of attendance should be altered for the convenience of the parents?—Yes.

1226. Have you tried to alter the hours?—No.

1227. Have you ever made application to do so?—I have not.

1228. With regard to the rations to whom did you make your application?—To my commanding officer, about five weeks ago.

1229. And it was refused?—Yes, because he had no authority to grant the permission, or he would have done so.

1230. As respects the hours of attendance, are you aware of any objection to changing the hours?—No.

1231. You are of opinion that it would be a convenience but you have never made application upon the subject, what hinders you from doing so?—The reason why I mentioned that it would be a convenience is on account of my not being able to get the children in by 9 o'clock in the morning, when school opens.

1232. You want to make it half an hour later?—Yes, because by half-past nine the children are generally in, and sometimes I cannot open school at 9 because the children are not there.

1233. (*Lord E. Cecil.*) With regard to the government grant of 5*s.* for the children's clothing, which causes so much misunderstanding among the parents of the children, is it not practically confined to girls above 4 years of age, for I see that in your printed statement you say, "the mothers think that 5*s.* is allowed for "every child in the regiment for clothing, whereas "all children under 4 years, and boys attending "the master's school are not entitled to it by the "regulations." Therefore I suppose that in point of fact the girls are the principal recipients?—The girls, and the boys, during the time they are in the infant school before they are sent to the master's school receive it.

Appendix, p. 116.

1234. (*Dr. Butler.*) I think that you said that on Friday the chaplain took the children for religious instruction, but not the infant children?—The grown children.

1235. From what age?—Perhaps from 9 to 15 some from 8 or from 7; some children from the master's school go to the instruction of the chaplain, but none go from me.

1236. You are not present when a religious lesson is given?—No.

1237. (*Chairman.*) Was your husband killed in the Crimea?—No, but he died of sunstroke.

1238. In what regiment was he?—In the 4th Hussars.

1239. What was he?—He was sergeant major.

The witness withdrew.

Col. C. C. Shute, C.B.

15 March 1870.

Status of schoolmasters.

BREVET-COLONEL C. CAMERON SHUTE, C.B., 4th Dragoon Guards, examined.

1240. (*Chairman.*) You are in command of the 4th Dragoon Guards?—Yes.

1241. And you have also been Adjutant of and afterwards commanded the Inniskilling Dragoons?—Yes.

1242. Considering the period for which you have served you of course have had ample opportunities of observing the working of the army schools. On the whole are you satisfied with them?—I am on the whole decidedly so, I think that they have given an interest in instruction which did not exist before.

1243. I believe that you have taken an especial interest in the matter?—Yes, I take very great interest in it.

1244. It has been very clearly established before us, in evidence, that of late years the class of schoolmasters who have been supplied to the army have been inferior to those whose services were formerly at its disposal; to what do you attribute that fact?—I have no conception to what it is to be attributed, I am fortunate, for I now have a very good schoolmaster, but it was formerly just the reverse, my first one or two schoolmasters were very indifferent, but my present one is a very good schoolmaster. He has been with me for six years.

1245. Is he satisfied with his position?—I think so, every man wants to go a head; he is not a man who ever complains, when he has wanted anything I have recommended that he should have it. The schoolmistress whom I had at first was not so good as my present one, she was not inclined to be dictated to, or to accept advice upon any subject, but the one whom I have now is a very good schoolmistress, she has been with me for some time, and I have no difficulty with her whatever, but my adjutant complained a good deal about her at first.

1246. It has been suggested to us that it might be for the advantage of the service if the status of the schoolmasters was to be improved. From the answers which you have been good enough to furnish to the Commission, I gather it to be your opinion that you would anticipate that inconvenience would arise if the schoolmaster was removed from his present position into something which was hybrid and anomalous, by being made a warrant officer?—As a warrant officer he would in fact belong to no society. He would not mix with the non-commissioned officers nor with the officers, and I think that he would have less opportunities of doing good than he has now.

Appendix, p. 104.

1247. I do not know that it has been stated in evidence, but at one time, I believe, when a superior class of schoolmasters joined their regiments, they regarded themselves as altogether beyond the discipline of the commanding officer, and that they even undertook to instruct the public, through the medium of the newspapers, as to the method in which they considered that military affairs should be conducted. Of course anything of that kind would be very disadvantageous?—It would be most prejudicial and fatal to discipline in every way.

1248. And it is of very great importance that the schoolmaster should be made to feel that he is under the same discipline as the rest of the men in the regiment?—Decidedly.

1249. The schoolmasters complain very much of the following points: First, that their pay is insufficient. Do you think that their pay is insufficient?—That is very much a comparative question with respect to the pay of civil schoolmasters and of other people with the same amount of education; it is hardly a military question. I would rather improve their position by increasing their pay than by giving what I call a false rank, and which, in my opinion, would interfere with their duties instead of the reverse.

1250. Then they complain of being forced to wear chevrons; do you think that that is an objection?—Wearing chevrons would be a cause of pride to real soldiers, but, as regards schoolmasters, I think the error has been in making them too military in appearance. I think that requiring them to wear a sword is out of place. I would rather give them a quiet dress, such in some degree as the chaplain would have. I think that for teaching infant children what they are now required to wear is out of character.

1251. They also complain of their kit being examined; what is your opinion upon that point?—I think that that is very absurd. I never did such a thing in my life. I do not know why it should do much harm, but I do not see the object of it.

1252. They also complain that when they are on board ship they are put on the same footing as an ordinary soldier?—I think that they ought not to be, but I think that this is a general grievance amongst our superior non-commissioned officers; but it seems a matter of necessity. We are none of us so comfortable on board ship as we are on shore.

1253. Would you prefer that the schoolmaster should have been a soldier in the regiment?—I do not think that that is at all an object. As a matter of choice, a man not being a prophet in his own country, I should rather be inclined to remove him from it. I do not see any object in the schoolmaster being a military man. I see no reason why a civilian should not be as good a schoolmaster as a soldier.

1254. You do not think that the fact of a man having been already subjected to military discipline, and having learned what it is to be in a regiment, would be an advantage when he became a schoolmaster, and when the maintenance of his position would depend a good deal upon his own sense of propriety?—I think that that might be an advantage, but in that case I think that it is better for him to be the schoolmaster of another regiment, and not of his own, because I think that it leads to favouritism towards the children. The old system of selecting a schoolmaster from among the sergeants of the regiment was an advantage. If you saw a boy behaving in the street like a blackguard, you sent to your sergeant schoolmaster, and he was responsible for him. The children were better brought up, being subjected to a more careful supervision out of school hours.

1255. Almost every witness whom we have examined has intimated to us that the schoolmaster has no authority whatever out of school, and that the little children run wild about the barrack yard, and several members of the Commission have been casting about for a suggestion whereby that inconvenience could be remedied. Can you help us in that respect?—I think that that should be done by the schoolmaster, and that he has as much to do with the conduct of the children out of school as he has to do with their learning decimal fractions. I do not think that there should be any difficulty about that, but your difficulty would be increased if your schoolmaster became a warrant officer; he would be quite above that sort of thing.

1256. (*Lord de Ros.*) You are aware that the position of warrant officer was done away with in the cavalry on account of those disadvantages?—Yes.

1257. (*Chairman.*) Are you satisfied with the system of inspection under which the schools are looked after?—I think that there is a very careful inspection.

1258. Would you object to the schoolmaster being allowed to give extra lessons out of school?—Do you mean to civilians?

1259. Yes.—I do not know that I should object to it, because I think that it would tend to make his position more valuable. The commanding officer of course must not permit his giving private tuition to interfere in any way with his school duties.

1260. Would you as a commanding officer object to its being required that a certain number of hours should be set apart for instruction, leaving to you the choice of the hours?—Not at all. I do not think that now, with men who have been eight or nine years in the army, you could very well introduce a compulsory system amongst them; but if you commenced it by sending all recruits to school after they had been dismissed from preliminary drills and the riding school

I think that it could be done with great advantage; that is to say, when they were so far grounded that their difficulties would not be so great as they were at first.

1261. Do you know anything about the Hibernian School, or the Duke of York's school?—Not very much; I have only had about three of the band from them, and they have behaved well, excepting a boy named Gallagher, who came from the Hibernian School about two years ago, who is a useless, misconducted young blackguard.

1262. You are strongly of opinion that the establishment at Hythe should be maintained as a school of musketry?—Yes; I do not think that we could at all dispense with it.

1263. (*Lord de Ros.*) With respect to the permission to give extra instruction, would it not very often be a great convenience to the adjutant, the quartermaster, and the paymaster, and that class of officers, that the schoolmaster should be able to give instruction to their children?—That would not be civil instruction; it would be instruction in the regiment. I see no objection whatever to that. The only thing is that I do not quite see why the quartermaster's children and the children of other officers in a similar position could not attend the schools.

1264. Would there be any objection to married officers in general having their young children taught by a good schoolmaster—(I would here add schoolmistress)—in the regiment?—No; on the contrary I think that it would be a very good thing.

1265. (*Chairman.*) Have you any suggestion to make with regard to the recreation rooms?—I have. One great difficulty is that not in one barrack in thirty have any buildings been added effectually to carry out the object. With regard to recreation rooms, I wish especially to mention, that of all recreations fencing and single-stick have the greatest attractions for the men.

1266. (*Lord de Ros.*) And magic lanterns have the least attraction?—Yes. A fencing room, however low, hot, and inconvenient, if well lighted, is crammed during the spring, autumn, and winter evenings. An instructor should always be present. With regard to recreations, recreations within a barrack, more particularly those which can be enjoyed in the evening, do more than fines or imprisonment towards the prevention of drunkenness. Of all recreations, fencing boxing, and single-stick are the most attractive, and they are much better for soldiers than bagatelle or magic lanterns! and such-like manly exercises should for military reasons be encouraged. I have a great number of men who subscribe to the recreation room, and they get pens, ink, and paper, gratis.

1267. (*Sir C. Russell.*) Has it ever occurred to you that the school of musketry would be better situated at Aldershot than where it is at present, namely, at Hythe?—I think that it would certainly be better to have it at Aldershot.

1268. As a large proportion of the shooting in the army takes place there, do you not think that those officers and non-commissioned officers who take an interest in it would derive advantage if the school of musketry was at Aldershot, where they could attend and see the arms tried?—Yes.

1269. (*Lord de Ros.*) Do you not think that attaching a school of musketry to Shoeburyness would be an advantage? would it not throw the officers into giving a little more attention to gunnery and mechanical appliances, as well as musketry, and be an advantage in that way?—The distance would be an inconvenience.

1270. (*Sir D. Cameron.*) With regard to what you have said as respects the schoolmaster having charge of the children out of school, would it not be more proper to make the parents responsible for the conduct of their children out of school than to make the schoolmaster responsible?—They are responsible in a great degree.

1271. You would not relieve them of that responsibility?—No.

1272. In the case of finding a child behaving, as you have said, like a blackguard in barracks, would you not speak to the parent on the subject?—Yes, and I would threaten to turn her out of barracks. You must have a combination.

1273. (*Lt.-Col. Chesney.*) Is there not a sort of acknowledged time when the master is responsible for the children at their play, namely, before and after school?—Schoolmasters in general seem to consider that they are only responsible for the children in the school-hours, which I consider an error; at the same time I would not take the responsibility for the conduct of the children altogether from the parents, particularly from the mothers. As respects the fathers it is very difficult, especially in the cavalry, because they are so constantly at the stables and away.

1274. Is there any practical difficulty in viewing the schoolmaster simply as a civilian attached to the regiment, though ranking as staff sergeant, and thus divesting him of his present military position?—I would make his position less military, but at the same time he must understand that he is subject to discipline.

1275. (*Chairman.*) Do you think that it would be preferable, in case of the misconduct of a schoolmaster, that he should be reduced to the ranks as might now be the case under the existing regulations, or that dismissal should be the consequence of misconduct?—I think that the punishment should be dismissal. I think that there might very likely be a serious objection to the same class of men becoming schoolmasters, if reduction of a schoolmaster to the ranks for misconduct continues possible.

1275*a*. Have you any further suggestions to make with regard to regimental schools?—I would strongly recommend that French and German be added to the list of subjects on the back of the first-class certificate; the knowledge of a modern language would *be infinitely more* valuable to a man during and after his service in the army than three or four of the subjects now on the list. On field service in cavalry in particular, for patrolling, reconnaisance, obtaining supplies, &c., a knowledge on the part of a few non-commissioned officers of the language of the country in which the army is serving is most valuable, and after discharge there are many appointments for which an acquaintance with French or German would be a great recommendation.

Col. C. C. Shute, C.B.

15 March 1870.

Army schools.

The witness withdrew.

The Rev. G. R. Gleig, M.A., Chaplain-General to the Forces, examined.

Rev. G. R. Gleig.

Army schools.

1276. (*Chairman.*) I believe that you have been chaplain-general of the army for 26 years?—Yes.

1277. And for 12 years, namely, from 1846 to 1858, you were inspector-general of regimental schools?—I was.

1278. And you had a good deal to do under Mr. Sidney Herbert, with the institution of the normal school at Chelsea, and also with the reform of the Duke of York's School in 1846?—Yes.

1279. You have been kind enough to favour the Commission with replies to some written questions which were sent to you; but there are one or two points upon which we should be glad to ask you a few further questions, especially with regard to the moral control and supervision which the chaplains of the army may have the power of exercising over the army schools; whether it is sufficient, and whether such opportunities as exist are generally taken advantage of?—I think that it is sufficient. I think that the school regulations are extremely judicious and wise with reference to that matter, and that their influence is extremely good.

Rev. G. R. Gleig.

15 March 1870.

Army schools.

1280. On the whole, you think that the general moral tone of the schools is satisfactory?—I think so. In my opinion there is no comparison between the moral and intellectual condition of army schools and of schools in civil life. The army schools are very superior to those in civil life. I have had many opportunities of examining schools both in London and in the country, and I think that nothing approaches the generality of our military schools.

1281. Do you agree with a good many of the witnesses who have been before us in considering that the class of army schoolmasters who present themselves now are inferior to what they used to be?—I am afraid that they are.

Royal Military Asylum, Chelsea.

1282. Do you think that the normal school at Chelsea for training schoolmasters works pretty well?—I think that it might be improved.

1283. I suppose that the chief improvement would be if we could get a superior description of candidates?—Yes, and if you put a little more power of rewarding and punishing in the hands of the teachers. In all educational institutions I think that it is a great mistake to make these persons cyphers except in the schoolrooms.

1284. Do you think that the Duke of York's School is now on a pretty fair footing?—I think that it is on an exceedingly good footing. They are very fortunate in their master; he is a remarkably able man.

1285. Do you think that the situation of that school is healthy?—Certainly not. I should be very glad to see it removed into the country.

Army schools.

1286. Are you satisfied with the system of inspection of army schools as it now exists?—I am scarcely competent to give an opinion upon that subject.

1287. (*Dr. Butler.*) How would you describe the control which the chaplains exercise over the schoolmasters?—It is rather a social and moral control than any other. They have no official power to control and direct schoolmasters, except in this, that the Council of Military Education has directed that the schoolmasters shall take those portions of Scripture for their Scripture lessons which the chaplains select for them, and that I believe they most conscientiously do.

1288. Do the schoolmasters give any other religious instruction except selections from the Scriptures?—They always assist the chaplain in the special religious instruction which the latter gives.

1289. But they take their instructions distinctly from the chaplain as to what they are to teach?—Yes, in the selections of Scripture to be explained to the children.

1290. Have you any reason to think that any of them at all fret under that restriction?—Not at all. I have never heard of such a thing.

1291. As to the religious services which the children of the army schools attend on Sunday, how are they conducted?—There is, not universally, though there is sometimes, a special child's service in the army, and it is managed extremely well. There is a sort of little liturgy which I have seen, and also a little lecture to the children themselves, which they understand; but the children usually attend church with the men also.

1292. By whom is the special service of which you speak conducted?—Always by the chaplain.

1293. Is it a matter of option with him as to whether this special child's service shall be introduced or not?—Very much so, because he has a great deal to do. The duty of a chaplain on Sunday is a very arduous one. He has probably two or three of what are called parade services to perform, he has also a service in the hospital, and invariably a voluntary evening service, so that when a man has conducted three, four, or five services, it would be rather hard to ask him to take compulsorily a sixth service.

1294. Is the special child's service held in the schoolroom?—Yes.

1295. Has the question ever been considered whether lay co-operation might be introduced into that service, so as to relieve the chaplain of additional labour?—In one or two instances I believe that it has been done, but not generally.

1296. Would you see serious difficulties in the way of giving that important help to the chaplain?—Certainly not.

1297. Have you reason to think that those special services are valued by the parents of the children?—I think that they are.

1298. Do they include a short address to the children?—Yes, invariably.

1299. I gather from your printed answers that you think that the head-master of the normal school at Chelsea has hardly sufficient influence allowed him over his pupils?—That is my firm conviction.

1300. Is that due to a defect in the organization?—It is due not so much to a defect in the organization as to a defect in the administration.

1301. Can you explain a little more fully where the defect lies?—The defect lies in all power being assumed to be in the military authorities. I think that it is quite right in a military establishment that the power should rest with the military authorities; but I think that the opinion and recommendation of the schoolmaster ought to be taken, for example, whether the children are to receive a treat, or whether they are to be deprived of some little advantage previously granted to them.

1302. Has it ever occurred to you to consider whether by any formal alteration the schoolmaster might be taken more into confidence?—I hardly know with whom that matter rests. I am one of the Commissioners of the Royal Military Asylum, and if we had power to do so we could request more authority to be put into the hands of the schoolmaster; but I fancy that an order to this effect must emanate from the Director-General of Education.

1303. I presume that most of the students in the normal school, who are members of the Church of England, have been already confirmed?—Yes, in most cases, or they are confirmed after they enter.

1304. With regard to the model school, can you state what are the regulations there for confirmation?—Regularly once a year the bishop confirms the children, and they are very well trained for it. No children are trained better.

1305. The children leave the school at 14 do they not, so that the time for confirmation cannot be extended beyond that age?—They do not always leave at the age of 14, those in the band leave at 15, and sometimes at 16; but a boy who has been brought up at Chelsea is as intelligent at 14 as 99 boys out of a hundred brought up in the country are at 18.

1306. Is not the age of 14 the extreme limit?—The age of 14 is the usual limit.

1307. What is the nature of the service which the children at the model school attend?—It is the ordinary Church service.

1308. There is no special child's service there?—No; there is what is called a Sunday school in the evening, in which the children are instructed, and where the masters help the chaplain.

1309. Do you not think that it might be an advantageous arrangement, considering how young the children all are, if there were some special child's service, such as you have previously spoken of?—I think that it might be inconvenient, but I should shorten the service. The service is a great deal too long for children, and there is no doubt that the greatest possible care should be taken in preaching to those children to make your language as simple as you can; but I need not say to you that it is not every man who has the power of doing that.

1310. (*Lord de Ros.*) From your general knowledge of the service do you consider that soldiers' children who are brought up in the regimental schools are more contaminated than other children by the bad language which is used in the barracks, or do you think that soldiers generally speaking avoid using bad language before the children?—I believe that the soldiers do not contaminate the children. Your lordship knows, as well as I do, that there are married

iarters, and I can only repeat what I think that I ve said in my printed statement, namely, that I have en round the rooms and round the barracks at all nes, and have seen the children who attend the hool, and that I never saw such orderly children in vil life as I have seen in the barracks.

1311. (*Sir D. Cameron.*) Do you think that the mber of trades which are taught at the Duke of ork's School might be extended?—I think so, with eat advantage.

1312. (*Lord de Ros.*) Are you acquainted with the ibernian school?—Yes, when I was inspector-general army schools I was frequently there.

1313. Do you not think that the instruction which given in trades there is very good?—Yes, it is tter than at Chelsea.

1314. (*Lt.-Col. Chesney.*) With respect to the aining school at Chelsea, do you attribute any want good behaviour in the students to the situation of e school?—Yes, there are a good many public houses und about.

1315. Have any cases of misbehaviour been brought your notice?—Yes; they are not of very frequent currence, but they might be obviated altogether by oving the school into the country. But the question whether you intend to keep up that establishment; ere are only seven students there now, and it seems me that you are keeping up a staff which is very eat for seven young men.

1316. (*Chairman.*) Have you any observations to ake with regard to the present status of the school- asters?—When the system was commenced you will member that the men were taken chiefly from civil e, and were paid at the rate of 4*s.* a day to begin ith. It was distinctly stated that they were to have badge upon them to mark them as non-commissioned ficers, but that they were to have a very simple uni- rm. They got a special position which was to be the same rank as the sergeant-major; they were satis- ed with it, and their pay rose in proportion to their erits. Latterly you have taken them first at 3*s.* a ay, and you have put stripes upon their arms. I do ot mean to say that this is wrong in itself, but aking it retrospective is a mistake; the men who ere received on the condition of not having these adges upon them have had the badges, and they are omewhat discontented. I think that that is rather bjectionable, but on the whole I must say that the ystem works exceedingly well, and that the com- anding officers of regiments are very attentive and ind to the schoolmasters.

1317. (*Lord de Ros.*) Do you not think that the hevron is meant to be a badge of military office, and hat it does not apply to the schoolmaster?—It is a adge of an office which the schoolmaster does not xercise in any way, and to which he has no right.

1318. And therefore he ought not to have it?—He ught not to have it.

1319. (*Lord E. Cecil.*) You would deprive the choolmasters of the sash and sword?—Yes, I do not hink that they have the least occasion for them.

1320. (*Lord de Ros.*) Both being military badges ike the chevron?—Yes.

1321. (*Dr. Butler.*) Has the chaplain of the regi- ment anything to do with the infant schools of the egiment?—I am sorry to say that we have no chap- lain of the regiment, but the chaplains have as much to do with the infant schools as with the other schools.

1322. I gathered from the evidence of a school- mistress who has given evidence before the Commis- sion, that the chaplain did not take any part in the infant school?—He takes no part in the elementary teaching of the infant school or of the adult school.

Rev. G. R. Gleig.

15 March 1870.

Army schools.

1323. Practically he would not come into any sort of contact with the infant school or with the school- mistress?—No, not beyond the special religious in- struction, which he is bound to give twice a week, and in the Sunday school.

1324. (*Maj.-Gen. E. Wilmot.*) Do you attribute the unhealthiness of the position of the school at Chelsea to the buildings or to the locality?—To the locality. It lies very low, it is near the river.

1325. (*Lord E. Cecil.*) Have you any observations to make with regard to the Hibernian School?—In point of healthiness there is no question that the position of the Hibernian School is extremely healthy, it is in the Phœnix Park, and its healthiness accounts for the good growth of the lads. If you ask me as to the education which is there given, there are diffi- culties which I do not like to specify. You cannot teach some subjects at all.

Hibernian School.

1326. In the paper which has been sent in to us by Mr. McLeod, in reference to the Duke of York's School, he mentions as a grievance that the ser- geants no longer salute him; do you think that his complaint is a just one? He says in that paper: "I for instance can teach and punish but I have no "power to reward. I cannot take the boys to any "place, such as the Museum at Kensington; I cannot "give them, on my own authority, a half-holiday; "and my influence for good is in every way re- "stricted. The accompanying letters will show the "kind of treatment I have from time to time received "in endeavouring to improve the condition of the "boys." And then he gives a correspondence which passed between him and the Commissioners with regard to the sergeants refusing to salute him, they having always been ordered to do so previously. Do you think that his complaints have a just cause?—I think that he would be far more useful in the moral training of the boys if his objections were attended to. Sergeants and others were required to salute the masters for many years. In my opinion it was a mistake to reverse that order. I think also that no indulgence ought to be given to the boys or students without the masters being consulted upon the matter, because they are far better judges of the conduct of their pupils than the commandant or adjutant can be.

Royal Military Asylum.

Appendix, p. 159.

1327. Do you think that it is a misfortune that the order requiring the serjeants to salute the masters has been rescinded?—I do.

1328. (*Mr. Parker.*) Do you consider the examina- tion of the schoolmasters' kits a grievance?—The schoolmasters themselves consider it a grievance; I think that there is no necessity for it, and that upon the whole you should not insist upon it; I would rather not see it done.

1329. I think that the students in the Normal School wear a different dress, according to whether they are soldiers or not?—They do so while they are students. If a civilian comes in he gets a student's dress, but the soldiers wear their uniform till they go out; a student's dress is a schoolmaster's dress.

1330. I have been told that that leads to party feeling between them, and that they divide themselves into parties of those who are civilians and those who are soldiers?—That is possible, but I have very often seen civilians and soldiers walking arm in arm.

1331. Would you think it desirable that they should all have the same dress?—Yes, I should prefer it.

The witness withdrew.

W. J. Reynolds, Esq., M.A., examined.

W. J. Reynolds, Esq.

Normal School, Chelsea.

1332. (*Chairman.*) You are the head master of the normal school at Chelsea?—Yes.

1333. You have been in that position for a con- siderable time?—Yes.

1334. How long?—20 years at Chelsea; 10 years head-master.

1335. Are you of opinion that the candidates for the post of schoolmaster are of an inferior class com- pared with what they formerly were?—Not in the least so, on the contrary (speaking of successful candi- dates) I think that they have intellectually improved.

1336. To what do you attribute that?—I attribute

W. J. Reynolds, Esq.

15 March 1870.

Normal School, Chelsea.

it partly to the fact that there has been a general spread of education; I think that that has been the cause of the improvement. I think that if men of exactly the same class had applied 20 years ago they would not have been what they are now. But it must also be borne in mind that the qualifying admission examination is somewhat higher than it was seven years ago.

1337. Do the majority of those who present themselves belong to the civilian class, or are they men from the regiments?—There are very few now who present themselves from the civilian class; the inducements are not sufficient, as the position of the schoolmaster has been so much altered.

1338. Then fewer persons from the civilian class present themselves than formerly did so?—Yes, there are very few indeed.

1339. And you attribute that to the change in the status of the schoolmaster?—I do so. To that change and to the change in the youngest age of admission from 19 years of age to 20; also of course to the non-eligibility of civilians not belonging to the pupil-teacher or schoolmaster class.

1340. Do you think that the civilian class are a better material than the soldier class?—I will scarcely say that. I think that when we had more civilians among the students, they very beneficially influenced the soldiers; and I also think that the soldiers did a great deal of good to the civilians. The soldiers introduced the military feeling of obedience, which seems to become instinctive after even a short service in the army, and of which civilians generally have no idea. The want of this feeling has been the serious defect, as army schoolmasters, of many otherwise excellent men.

1341. You would prefer to draw your schoolmasters indiscriminately from both classes?—Yes. We have men of remarkably high principle from the soldiers, but every now and then we have a man who thinks that if he has done his day's work, and does not get quite drunk, and is ready the next morning, everything which is required of him has been performed; his object is not to be unblameable, but to be unblamed, and that seems the object of the soldier proper. In the civilians we used to have a higher standard of motive.

1342. A good soldier would be as good as a good civilian?—Yes, and with reference to his future as an army schoolmaster, the best soldier is, on the whole, better than the best civilian.

1343. I suppose that the respects in which you consider the discouragements to exist which are felt by the schoolmasters, are those which we have already had stated before the Commission, namely, the low amount of pay, the reduction of a schoolmaster to the ranks, &c.?—Yes. We have heard a rumour that two schoolmasters have been lately reduced to the ranks. If that be a fact, I believe (although it is dangerous to prophecy) that we shall not have many more applicants.

1344. How many students have you at present?—We have only, I think, about 16.

1345. How many used there to be?—We have had the full authorised number, viz., 40 students. There were then 20 monitors who messed with the students, so there were 60 at mess. We have had 40 candidates for 12 vacancies. I have repeatedly examined between 20 and 30 candidates, and have sent away qualified men.

1346. Did the change occur immediately after the change in the regulations?—Very soon afterwards; the number of candidates dropped.

1347. Is the test by which the competency of a schoolmaster is ascertained satisfactory?—I think so, as regards both coming in and going out.

1348. Do you inquire into the capacity of the schoolmasters for communicating instruction?—Not upon their coming in, but upon their going out the inspector hears them give a lesson to the boys in the model school.

1349. But they have no opportunity of either acquiring instruction, or having their acquirements tested, in respect of instruction to adults?—Not the smallest.

1350. And that you think is a very great defect?—Yes.

1351. It is one thing to teach children, and it is another thing to teach men?—Yes. The model school is an excellent school, but that does not imply that it is a good place for men to be in so long, being so different from the children's schools in the army, where the same classification cannot be carried out, and where the attendance is irregular. Nor can the soldiers' school be managed upon the same principle.

1352. Do you at all watch the career of the schoolmasters who pass through your hands?—Yes; they continually write to me.

1353. Can you state what proportion of them come to grief through misconduct; I suppose that a certain portion do so?—Yes; but I believe that it is a small proportion. On reading the reports of the inspectors I believe that it will be found that the schoolmasters behave exceedingly well. We hear of the bad ones and not of the good ones.

1354. Are the soldiers who present themselves for that post generally men of superior intelligence?—I think so.

1355. It is not the idle men who, being discontented with the military profession, take refuge in teaching?—I may say that we have had a certain proportion of men who have changed their names; they have got into a scrape, and they have hidden their heads in the army, thence they have got into the Normal School, and thenceforward have gone on creditably. They sometimes intrust me with these accounts of themselves in confidence. Some civilians discovering that in the Normal School the soldier-student receives pay while the civilian does not, have enlisted in order to come on to us as soldier-students.

1356. How many assistants have you?—I am now by myself as regards the regular daily routine of study; but there is a separate instructor for religious instruction, for fortification, for vocal music, and for model drawing.

1357. Considering the small number of pupils, I suppose that you do not require much assistance?—No; it seems absurd to require it with so few men. But the considerable amount of work which I in fact have to do arises not from the number of men but from the multiplicity of subjects of instruction. Except in looking over examination papers I can as well teach 20 men as two men.

1358. When you had 40 candidates how many assistants had you?—There were then a head-master and two assistants, making three altogether.

1359. Are you inspected?—Yes; twice a year, by an inspector of the Council of Military Education.

1360. Do you consider the accommodation for the pupils satisfactory?—No. I think that it must be termed bad, but it is capable of being easily made sufficiently good. I cannot find anything to say in favour of it, except that there is sufficient space.

1361. Is the accommodation inferior to what the common soldiers now enjoy?—There is no comparison; it is comfortless to a degree. When friends from the regiments come up occasionally the students are ashamed to let them see the reading room.

1362. Do you pass the same criticism on the sleeping apartments?—The dormitories are not good; they are very badly ventilated, and they are not kept clean enough; the means at the disposal of the authorities are not sufficient. Not being formed into separate rooms there is of course no privacy. No man in the Normal School can ensure being alone at any time. This is in my opinion a most serious defect.

1363. Do the students go much into the public-houses in the neighbourhood?—They are obliged to go there, because after half-past 5 they cannot have anything whatever in the building till 8 o'clock the next morning; the consequence is, that when a man has to give a lecture at 6 o'clock and feels afterwards at 7 or 8 o'clock that he wants something, even a glass

beer, or a piece of bread and cheese and some ater, he must go to a public-house for it.

1364. But the students mess within the precincts of e building, do they not?—Yes, and the messing as r as it goes is I think very good.

1365. When is their last meal?—Generally at half-st 6, but frequently at half-past 5.

1366. Have you any private intercourse with the idents?—Yes.

1367. Do you go sometimes into their sitting rooms d converse with them?—After a lecture has been ven they can say what they like; I often stop till v own dinner time, and they tell me all that they .e to tell me.

1368. Were the larger number of students to whom ou have referred accommodated in the same building d in the same apartments?—No, they were not all it into the Normal School building, some of them id dormitories on the other side.

1369. Do those dormitories still exist?—Some ars ago there was a great stir in order to give the ys more room, and consequently those dormitories ave been given over to the boys. The dormitories isting ready for reception are in the Normal School, id are designed, I believe, for the complement of 40 udents at least.

1370. How do the students amuse themselves?—hey play at football, at fives, and in Battersea Park cricket in the season, but we are not well off in the ay of indoor amusements.

1371. What is the kind of instruction which you mmunicate?—I go through the course of subjects hich are put down, which is considerable, and I ave always reference to the students being teachers terwards.

1372. Will you supply us with all the statistics nnected with that part of our inquiry?—I will o so.

1373. Do you think that it would be advisable to lter the course of study?—The course has been often ltered. I have many times thought of that subject. ome people come and tell me that I have been doing arm all my life, and that I have been teaching things hich are of no use to the students, and never can e. I teach them algebra, and trigonometry as far s the practical part of trigonometry is concerned, that to say, what is called the solution of triangles, nd I teach the elements of chemistry sufficient to nable them to give a lecture precisely, as far as it oes. I have many times asked myself whether this annot be greatly restricted, inasmuch as people tell ne that it is of no use. I have asked students who ave passed through the course what subjects they hink might be excised from it. Each one of the subjects being considered especially useful by some or ther of the students, it has come to pass that I have ot suggested any alterations in the course which has een in force for some years.

1374. What are most popular subjects?—Chemistry, lgebra, mechanics, and geography.

1375. Do you not think that, although they themselves may not be called upon to communicate nformation upon those subjects to their pupils, what hey learn from you has a general tendency to quicken heir intelligence?—Certainly. I try to open out knowledge to them, and to show them the little which they do learn, and how much there is yet to learn, so as to counteract the idea which a schoolmaster gets, after repeatedly teaching through a small course, that he knows everything. I have tried to show them that there is no reason for that supposition, as there is so much more to be learned. Besides that, I think that if a man sees that there is a great deal to be learned, and if he appreciates the fact from his own experience that knowledge is really valuable and desirable, and that the only way really to impart knowledge is to begin at the very beginning, he will go to teaching the very elements of knowledge with more courage and heart, and accordingly with more efficiency.

1376. How would you get over the difficulty to which you have alluded, and give the students a more satisfactory education in the art of teaching?—I do not know much of the army system, but it has often struck me that the students could go for a certain time to the Wellington barracks, and that there could be an adult class there for the students, and that they could also be sent to Woolwich,—there is a large barrack there. I have not a sufficient knowledge of these subjects to speak upon that matter, but I am sure that they waste their time in the model school, and that they get tired of being there so long.

1377. How long do they stay in the model school?—12 months.

1378. Do you think that a shorter time would suffice?—Yes.

1379. Particularly if it was eked out by a course such as you have suggested?—Yes.

1380. I suppose that the students come to you with an elementary education?—Yes; there is a qualifying and competitive admission examination. To get full marks, a candidate would have to be a good writer and speller, and to show a certain amount of knowledge of Scripture, arithmetic, English grammar, English history, geography, and geometry. But he might have no knowlege of geometry and yet pass the examination, as he is not required to pass in each subject, but merely to gain the minimum per-centage of marks (50 per cent.) on all the papers collectively.

1381. Do you find any difficulty in maintaining discipline?—No. I have so much influence with the students that the expression of a mere wish by me is sufficient.

1382. Do they salute you?—There was a little difficulty about this saluting on the first introduction of soldier-students. Should the soldiers salute a civilian? I solved it for myself easily. I said "I am "not a soldier, and by no means expect you to salute "me in the military sense of the word; but I shall "certainly expect you to recognise our relative posi- "tion by politely touching your cap, which recogni- "tion I shall of course always return." With me personally there has not been the slightest difficulty.

1383. (*Lord de Ros.*) You are saluted on the same principle as an under graduate at Oxford would salute one of the censors if he passed him?—Precisely.

1384. (*Chairman.*) Have any of the pupils who are now under your direction got drunk?—Yes, and this has happened far oftener in quite recent times than formerly.

1385. I suppose that the temptation is very great?—There are temptations. I think a system which has been introduced acts as a temptation to excess. In former days the soldier-students drew their pay at irregular intervals, and of course not simultaneously, from the paymasters of their several regiments. Now the paymaster of the Royal Military Asylum pays them all simultaneously at stated intervals. All are rich together; this leads to excess.

1386. Would you recommend the removal of the school to some other situation?—No, I think that if a man will get drunk, he will just as much get drunk wherever we might go. There is a very great temptation to drink at the houses of the publicans to whom the students are obliged to go for legitimate refreshments. Students have frequently said to me "Could "not something be supplied to us if we paid for it, "and if so we should be very glad to stop in."

1387. That is to say, if there was something like a canteen?—Something like what is done in the regiment. They say "We can get a cup of coffee for a "penny."

1388. There has been no difficulty yet in keeping up the supply of schoolmasters for the army?—No; the schoolmasters' staff is nearly complete.

1389. You have nothing to do with the schoolmistresses?—Nothing whatever.

1390. Where are they trained?—Speaking of army schoolmistresses, I do not know that there is any training.

1391. Do you think that if the qualifications of candidates were properly tested, and if there was sufficient

W. J. Reynolds, Esq.

15 March 1870.

Normal School, Chelsea.

inducement to attract persons of education, a satisfactory supply of schoolmasters could be obtained without passing them through a normal school?—I think that it is possible. I have often considered that point. I have had men who have been at Oxford or Cambridge, and some who have taken academical degrees. I have asked them "Have you wasted your time "here?" and they have said "We have not." They have always said "We have learnt a great deal here "which will be very useful to us as teachers."

1392. Would not that rather apply to your individual teaching than to anything which was conveyed to them by the system?—There I am afraid you have hit the bull's eye, there is something in that with reference to such men.

1393. The principal object of a normal school is not so much to communicate actual instruction, as to introduce and maintain a good system of teaching?—Exactly so. A normal school ought to be a place especially adapted to the instruction of teachers.

1394. In that respect it seems to me that the normal school rather fails than otherwise?—Does your Lordship mean to say that what they learn there makes them perhaps better men, and better educated, but does not make them better teachers? A man may be a good elementary teacher and schoolmaster without being well informed or clever, while a highly educated man having uncommon talents may be an inefficient teacher. But is it therefore true, or is it in fact true, that to instruct a man having a natural aptitude for teaching is futile and superfluous? Some people, and those eminent, seem to think so; I do not agree with them.

1395. Should we, probably, without the normal school, obtain those scholastic qualifications which under your superintendence they acquire there?—I do not know where they could be acquired. There are men who have obtained their education elsewhere, and who have had a good education, and probably a liberal one, but who perhaps have lost their place in society, and they say, "Where shall we go?" Those are the men whom you would get; there are plenty of them in London, and you may get them if you advertise for them tomorrow.

1396. I suppose that if we relied upon that source for supplying ourselves with schoolmasters we should perhaps cut off the supply of soldier schoolmasters?—It would seem so. That would not be desirable.

1397. I imagine that the military candidates are men who really come to your school for the purpose of qualifying themselves, so far as learning is concerned?—Exactly so. They, like the great majority of other candidates, are not previously sufficiently instructed to make really good teachers. I may as well add that no man has ever been admitted to the normal school who has had a previous acquaintance with all the subjects of the normal school course.

1398. And you have told us that the military element is very advantageous?—Undoubtedly. I felt opposed to it when it was brought in, because I knew nothing about it, I was sure that there would be a certain recklessness which civilians are apt to impute to the position of a soldier, but I found it much less than I expected.

1399. Do soldiers and civilians amalgamate well?—No, but the contrary.

1400. Why?—Partly on account of the uniform; the uniform is a hindrance at our place.

1401. You would put the person into a student's uniform, instead of a soldier's uniform?—Yes; I would give all the men the same distinctive uniform, which would at once produce a *solidarité*. Now each man is a unit by himself. If a man from the 150th were to go and get drunk, it would not affect in any way a man from the 250th, or a civilian, because there is no external symbol of their belonging to the same institution or of the soldier's belonging to any institution in the neighbourhood; he might be at large on leave from his regiment for aught that would appear. Again, civilians in their uniform feel themselves above soldiers in theirs, and will not walk out with them.

1402. Do they go to church, or are any arrangements of that kind obligatory upon them?—Yes, they must go to church twice on the Sunday.

1403. Does the chaplain ever attend upon them?—Yes, he gives them religious instruction for two hours in the week, and they are also examined in Scripture knowledge at the end of their course.

1404. Have any of the students who have passed through your hands become superintending schoolmasters?—Yes; I believe all the superintending schoolmasters have passed through my hands, except one man.

1405. What are your relations with the head-master of the Duke of York's school; are you under him?—No, in no respect; on the War Office list I am shown to be head-master of the normal school, and he is upper master of the model school. Neither is at the head of the whole establishment, and the actual position of each with respect to the Commandant is unsatisfactory.

1406. Has any inconvenience arisen from that?—I consider that very great inconvenience has arisen from it.

1407. In what respect?—The Commandant is supposed to have charge of the students, and of the boys, when they are not engaged in their studies. As soon as they are engaged in their studies he, in consequence of the antagonism which existed when the system was first started, is supposed to have no more authority over them. Therefore of course the Commandant at once feels half his interest in the place to be taken away; he might possibly say, "I "am only half a Commandant."

1408. And on the other hand you have no authority out of school?—None whatever. If it were not for the courtesy which I have always received from the Commandants and the Adjutants, there might be a dead lock.

1409. To use an American phrase, you do not "collide" with the master of the other school, do you?—No, I keep myself very much to myself.

1410. On what occasion could you come into collision with him; the establishments are quite distinct?—The establishments ought to be quite distinct. There are now pupil-teachers who are altogether of a separate class, they are boys of about 18; they are civilians, and they are brought in to teach in the model school. After they have passed through a certain course there they become students, and go through the normal school as students. These pupil-teachers are rather in the way; after they have done their work they come into my building, and the consequence is that there has been some question as to who has there the management of them, whether myself, or the Commandant, or Mr. McLeod, who has alone to do with their teaching.

1411. That is a geographical difficulty?—Yes, but it is practically very inconvenient.

1412. Who was it that decreed that the Commandant should have no authority over the boys when once they had entered the sacred precincts of the school room?—I think that it was the then Secretary at War. He was one of the first founders of the new system, and he found that the Commissioners of the Royal Military Academy were against it; he, however, said "I am determined to have this thing "started, and therefore if you cannot work with me "I must do without you;" but it has acted badly.

1413. Is the discipline which is exercised over your school by the Commandant and by the executive officers pretty strict?—I think so.

1414. Is it satisfactory?—Yes, if the students are considered as soldiers.

1415. If a student commits an offence, and is brought before the Commandant, is that fact notified to you?—Not at all. A student has been sent away without my knowledge.

1416. If a man misbehaves himself in school what happens?—If a man misbehaves himself in school I speak to him before the others. Ultimately, if I told a man to do such and such a thing, and he said "

hall not do it," I should write a letter to the Com-ndant requesting him to forward it to the Council Military Education, and I fancy that he, without ng anything whatever, would send the letter on, some time afterwards a letter would probably come the Council of Military Education saying that man must go back to his regiment; but it would follow that I should know of that letter till I saw man's place in the class vacant.

417. Is the health of the students pretty good?—

418. If one of them fell sick where would he go?—would be removed to the hospital.

419. To the Duke of York's school hospital?—

420. Are the students satisfied with their food and ng, except in those respects which you have men-ed?—I think that they are.

421. (*Lord de Ros.*) Who is it that neutralizes authority of the Commandant; is it the Council of ucation, or is it the Commissioners, or who limits —The Commandant seems to have no authority tever over the *educational* establishment.

422. Who takes that out of his hands?—It is in the ds, I suppose, of myself and of Mr. McLeod, under Council of Military Education.

423. But not of the Commissioners?—Not of the mmissioners. The Council of Military Education our masters.

424. Do you think it possible in the ordinary in-uction of the normal school to introduce any of elements of surveying which are so useful to a dier?—About 15 years ago we tried it, but we nd it very difficult to obtain a place to practice in; ttersea Park was not then formed.

425. Would not access to Battersea Park for that rpose be very easy?—We have sufficient to do hout that; not much time is lost.

426. With regard to the usefulness of knowledge the soldier, supposing that he gets forward in the ny, would not a knowledge of surveying be very luable to him?—I teach the students trigonometry. each them specifically with reference to its appli-tion to surveying, so that all that they would have do would be to learn to take observations, and I ould say that a man who had gone through my urse would be more supplied with useful knowledge aring on the subject than are many who are engaged that occupation.

427. Have you a compass?—A theodolite. I also ach them to make the calculations after the obser-tions are taken, but practically we do not survey a ece of ground, and plot it, and so on.

428. With respect to the loss of service, a man ho proposes himself as a schoolmaster appears to lose lf his service; is that so?—Yes; as soon as he has listed as a schoolmaster he loses half his former rvice, and he also loses all the time he has spent at helsea.

429. Is not that considered a very great hardship?—Yes, and the consequence is that as soon as a man as six years' service he says "No, I will not give it up;" and so, however suitable in every respect he ight be, he does not become a candidate.

430. Do you not think that it is that which pre-nts many soldiers from becoming schoolmasters?—I ink that it is a very great hindrance; another indrance is that men are not encouraged to come up. have known several instances in which a man has ade inquiry and his sergeant has said, "It will not do for you."

431. Would not the commanding officer select a an?—If the commanding officer had a good man, e first thing which he would do would be to recom-end him not to leave the regiment to go to Chelsea.

432. (*Dr. Butler.*) You have stated that the Sun-ay schools are generally regarded by the students as grievance; will you explain how that happens?—have put it down because it is always a practical rievance. Sunday schools are very good things, but is Sunday school is held from 6 to 7 in the evening, and these men have been working in schools all the week. So the soldier's Sunday is no day of rest; he has a morning parade, which is not a dress parade, then he has a full dress parade at 11, which is what is called the church parade; then there is the dress church parade at 3, then he may go and take a walk until half-past 5, and there is this Sunday school at 6 o'clock. Only a month ago a master said to me, "If anybody ever broke the Sabbath it is myself, by "doing what I am now doing. I have been working "at teaching, giving impositions, and cutting my "pupils on their hands for punishments, just as I "should do on a week day." Besides that there are a great many Roman Catholic boys there now, and they are marched into the school and do nothing (as at present there happen to be no Roman Catholic students or monitors), whilst the others are employed.

1433. Does the fact of the Sunday school being held from 6 to 7 imply that a lesson is given by anyone?—The students go into the school at 6 o'clock on the Sunday. I do not go there myself.

1434. What do they do there?—The boys have instruction under the direction of the chaplain; but they have religious instruction from the chaplain during the week.

1435. You have mentioned that there are cases of drunkenness among the students at the normal school, is any notice taken of that when such a case is found out?—Yes, it is put down in the books, the Commandant of course puts it down in the defaulters' sheet; and I think that if a man got drunk twice he would be reported to the Council of Military Education.

1436. Do you think that it is practically felt that if a student gets drunk he probably forfeits all chance of becoming a teacher?—I should think so, if it is established that he has been really drunk. But a soldier does not think very much of getting drunk, and would rather shield than expose a comrade who had done so. When I first went to Chelsea, and the students were all civilians under the immediate superintendence of the head master, a man would have been forthwith dismissed if he had got drunk. The idea of his staying would have seemed preposterous; but in the soldier element there is a certain laxity in that respect. A soldier of perfect sobriety, who would abhor being drunk himself, seems to regard a comrade who has got drunk as not so much culpable as "foolish."

1437. Should you not feel that if a man held the responsible position of a teacher it would be fatal for him to get drunk?—I should once have thought so, but now I should think much worse of a man whom I knew to be in the habit of drinking too much without ever being at all drunk than I should of a man of whom I knew that he had been once drunk and even very uproarious. I have had occasion to step out beyond my sphere (which I do not like to do), and I have gone to the Adjutant in the case of a very sober man who has been working very hard, and perhaps has taken one glass of something or other, and become intoxicated quite accidentally. I of course watch such a man, and if the drunkenness is not repeated it is found out whether it has been an accident or not.

1438. Would you not say that there are large numbers of men in the service to whom the temptation to drunkenness is next to nothing?—Most certainly. If a man repeated the offence of getting drunk, I should certainly at once say that it was strong evidence that he was not a fit man for a teacher.

1439. Have you any evidence of other immorality among the students besides drunkenness?—Not so much, but occasionally there are instances of it. In early times it was very severely dealt with.

1440. Am I to gather that it would be less severely dealt with now if it were discovered?—I should not know of it now.

1441. Would the discovery of immorality of that kind impair the chance of a student being eventually admitted as a teacher?—I should think that it would,

W. J. Reynolds, Esq.

15 March 1870.

Normal School, Chelsea.

but I cannot give an answer to that question from my own knowledge.

1442. Within your own knowledge have there been any great number of instances of young men being in hospital on that account?—I should say remarkably few.

1443. At what hour in the evening do you consider that your duties are over?—I teach in the lecture room till 4 o'clock. After that hour much of my time is engaged in looking over examination papers and preparing chemical lectures.

1444. Have you any opportunities during the evening of anything like close intercourse with the students, for example, for the purpose of reading, over and above the teaching in the school?—Our men have sufficient work to do, considering what I give them during the day. Each day, from Monday to Friday, from 6 to half-past 7, no man is allowed to move from his seat, and perfect silence is kept in order that the time may be devoted to study.

1445. You think that later on in the evening there is very little time for general literary culture?—I do. After the students have done their work for me there is not much time for anything else. But many men have read a great deal while at Chelsea.

1446. (*Lt.-Col. Chesney.*) Can you mention the case of any one who has latterly been in the institution who has been tried for habitual drunkenness?—One man came to Chelsea with a bad defaulter sheet, but he passed creditably through the course, and I have not heard anything against him since he was appointed schoolmaster.

1446*a*. Are you aware of the cases of two men who were recently in the institution, or who are now there, who have been reduced for misconduct in the army?—I know nothing about their previous history. I know nothing about their defaulter sheets. The persons come to me, and I examine them, and I report to the Council of Military Education, and if they are favourably thought of they come to my class.

1447. You do not consider that drunkenness is common?—It is not common, but it is not so uncommon as it was formerly.

1448. Are your young men allowed to be out from half-past 7 until 10?—Yes. When we had only civilians they were allowed to be out from half-past 8 until half-past 9. But I would not convey that the men are generally all out during these hours. It is not so. The men at the school have been on the whole men anxious to improve themselves.

1449. In your opinion do they generally spend their time in the public-houses?—To a great extent they are induced to go to them by the comfort nature of the accommodation at our place. M have gone to the public-house to be quiet to get lecture; the noise of the boys beneath the sch having occasionally prevented their doing so there.

1450. When they are brought up for an offe like drunkenness, as I understand you, they punished by the Commandant entirely as soldiers, not as students?—Yes.

1451. Have there been two cases of men go away latterly with cash belonging to the mess?—cash is intrusted to them; there have recently b cases of dishonesty.

1452. Can you tell us whether the conditions entry into the Chelsea school are thoroughly kno in the army?—No, they are not. I have found m who have had the utmost difficulty in ascertain them. Men frequently write to me, but I alw refer them to the Council of Military Educati Men have submitted themselves to the examinati certain of failure therein, in order that they m know the quality of the examination with a view competing at a future time.

1453. (*Maj.-Gen. Eardley Wilmot.*) When y say that these men go to the public-houses, do y mean that they go to the bar of the public-house or a private room of their own?—They have ma arrangements with the publican to let them have room, into which other customers shall not com This fact is creditable to the students.

1454. (*Dr. Butler.*) That room has been called t students' room, has it not?—Yes. Students have t me that when their officers have informed them th they have been successful in the examination for a mission to the normal school, they have said themselves, "Now I am going to Chelsea, and " must be careful that no slang language passes m " lips, because I am going into a high place;" a when they have seen their inferior accommodatio and the small public-house room into which th were expected to go for recreation, they have be shocked.

1455. (*Lt.-Col. Chesney.*) I suppose that you wou not know the fact if the students used bad language their mess?—On the whole the students would n allow bad language to be used amongst them. A m who should use bad language would be looked dow upon, but I do not know that a man would now b necessarily reported for using bad language. Whe the mess was under my charge, bad languagc ce tainly was never heard there.

The witness withdrew.

W. McLeod, Esq.

Model School, Chelsea.

WALTER MCLEOD, Esq., examined.

1456. (*Chairman.*) You are head master of the Model School, which is commonly called the Duke of York's School?—I am.

1457. How long have you been in that position?—For nearly 24 years; 23 years in December last.

1458. We have had the pleasure of visiting the school. Are you of opinion that the school is on the whole in a satisfactory condition?—No, I do not think that it is. In many respects I think that it is in a most unsatisfactory state, but especially as regards the discipline. Things are now in a much better condition (that is to say, within the last 18 months) than they were before, because about 18 months ago we had a Board especially appointed to inquire into the condition of the establishment; and that Board recommended certain changes, many of which have been carried into effect, and the consequence has been certain improvements since then.

Appendix, p. 170.

1459. How was that Board composed?—The president, I think, was Major-General Hamilton, and there were also Colonel Sir Edward Wetherall, Colonel Pocklington, and Dr. Massey.

1460. Did they overhaul the whole establishment?—They did.

1461. That is to say, its material as well as i moral and educational condition?—They did not con at all into the schools; they inquired especially in the ventilation of the dormitories, of the workshop and of the school rooms, and the feeding, the clothin and the cleanliness of the boys.

1462. And their reccommendations have bee carried out?—Most of them, I believe, have bee carried out.

1463. And a great improvement has followed?—Certainly.

1464. In what respect have their recommendatio not been adopted?—As regards the boys using th playground on the north side of the building, and th space in front of the Royal Hospital, and also as regard their going out. They do not go out so frequentl as that Board recommended; they occasionally go t Battersea Park, but the Board recommended that the should go to Battersea Park for the purpose of pla and not as they do now, merely making a parade marc of it. They leave the establishment at 20 minute to 12 or half-past 11, and they march out for half a hour, and they are back again at half-past 12. Ther is no recreation; the boys do not enjoy it; and, more

er, they always go out with their drums or their nd, and the boys have to carry their large drums d to blow their instruments on going out and on ing back.

1465. How comes it that the recommendations of so ry influential a committee have not been carried t in their entirety?—That rests with the military horities of the school; of course I have nothing to with that.

1466. (*Sir D. A. Cameron.*) To whom did the mmittee report?—I think that they reported to His yal Highness the Commander-in-Chief, or to the cretary of State for War.

1467. (*Chairman.*) Whom do you mean by "the military authorities"?—I mean the Commandant d the Adjutant.

1468–9. (*Lord de Ros.*) Do you suppose that this atter is at the entire discretion of the Commandant, that there is a superior authority overruling him?—e is supposed to carry out all the regulations which e laid down for the guidance of the school, but am very sorry to say that those regulations are not tended to in very many instances.

1470. (*Chairman.*) As I understand you, the material nstruction of the establishment was examined into these Commissioners, and has been altered to a rtain extent?—Yes.

1471. Did they go into the question of the scipline?—Not at all.

1472. Or into the question of the education?—Not all.

1473. You say that the regulations by which the scipline is conducted are unsatisfactory; will you te in what respects that is so?—My notion, not ly of a military establishment, but of a school nerally, is, that there ought to be perfect discipline all occasions, and that the boys should be carefully perintended, not only in school but out of school. the present moment I regret to say, that the con-ct of the boys on going into chapel and coming t of chapel on the Sunday is discreditable to any tablishment, and complaints have been made to me ladies and gentlemen from outside of their conduct. fact, I am often quite disheartened at the condition the boys; there is not the slightest reverence either prayers in the morning, or on going into chapel, or coming out from chapel.

1474. (*Lord de Ros.*) At what time do they go to chapel in the morning?—They assemble at 10 clock, and go into chapel at 10 or 5 minutes to 11.

1475. (*Chairman.*) How many disciplinary officers e attached to the establishment?—It is rather fficult to state that. We have a Commandant, an djutant, a quartermaster, a sergeant-major, a sergeant each company, and also a certain number of pioneer rporals.

1476. Without going into details, which perhaps it ould be impossible to follow out, the impression hich you wish to convey is, that the executive partment of the establishment does not maintain e discipline which it ought to do?—Certainly, that my opinion.

1477. Would you be inclined to suggest that any xecutive power should be given to yourself and to e assistant schoolmasters over the pupils after they ve left school?—I think that we ought to have a neral superintendence of the boys out of school.

1478. Would you desire to have a power of punish-ent confided to you, or do you think that you should port, and that the military authorities should nish?—It is difficult to give an opinion upon that oint. I am myself very unwilling to punish at all on any occasion.

1479. You have not a strong opinion upon that oint?—No.

1480. In school if a boy misbehaves himself do you nish him or do you report him?—I punish him; e boys in the school are under my control; the rporal punishment is by a cane, and the greatest mount of strokes is six upon the hand, and on no ther part of the body.

1481. The time-honoured instrument of punishment in this country, namely, the birch, has not been made use of?—No, we have not made use of it for some years.

1482. By your answer I understand you to be of opinion that the birch should be altogether suspended?—I should like to discard it from school altogether.

1483. I suppose that you have no difficulty in maintaining discipline in school?—Very little.

1484. Are you satisfied with the sanitary condition of the children?—At the present moment, on the whole, I think that it may be considered as satisfactory.

1485. It struck me on going round the school, when the boys were at dinner, that there were a good many with sore heads?—We have always a good many boys with sore heads and with chilblains.

1486. It also struck me that there would be a difficulty in preventing contagion, inasmuch as the parents and friends of the boys are allowed to visit them every Sunday, are they not?—Yes. I think that that is an evil. I think that the parents and friends ought not to be admitted, except once a month, but the boys are seen now on any day.

1487. The schoolrooms and the other apartments appeared pretty satisfactory?—They have been very much improved. I do not think that they can be improved more than they have been, but they are still very defective.

1488. The upper rooms are very low?—Yes, we were obliged to make the best arrangements that we could with the existing establishment.

1489. Would you remove the school from its present situation into the county?—Most decidedly.

1490. Do you think that the boys get sufficient play?—I do not think that they do.

1491. (*Lord de Ros.*) How many hours play do they actually get?—It is difficult to say, because their play is so frequently infringed upon by other duties, such as drill and the workshops, but, altogether, I should say, about $2\frac{1}{2}$ hours a day. The Council of Military Education decided two or three years ago that the boys were to go to work between half-past 4 and half-past 6, and that they were to have a full hour for recreation between school and work, but that has seldom been carried out.

1492. Then do you mean that they have had less than an hour for their play?—Yes, much less than an hour after half-past 3, as they go almost direct from the school to the band-master or to the workshops.

1493. Have they not entire liberty for recreation in the afternoon?—They are supposed to have it from 12 to 2, but there are so many duties which come in to interfere with the hours set apart for play.

1494. (*Chairman.*) Is the food satisfactory?—I think so.

1495. Are the washing arrangements sufficient?—I think so; but the boys are not kept so clean as they ought to be.

1496. Are there any women who look after them?—There are nurses.

1497. Are they the kind of women who are fit to be trusted with such a responsibility?—In many cases they are not. There has been a good deal of drunkenness.

1498. Is not drunkenness immediately followed by dismissal?—I do not think that it is always so.

1499. Each boy has a bed to himself, has he not?—All the elder boys have beds to themselves; for the younger boys there were double beds.

1500. (*Lord de Ros.*) Up to what age?—I do not think that there was any specified age, but there were a good number of double beds. All one side of the building was set apart for that purpose, but each boy was provided last year with a single bed.

1501. (*Chairman.*) With respect to the education of the boys, it begins at the age of seven?—It now begins at seven, formerly it was five.

1502. Do you prefer seven?—I have no objection to seven.

W. McLeod, Esq.

15 March 1870.

Model School, Chelsea.

1503. Would you object to five?—No.

1504. How long do they stay with you?—I think upon an average about five years.

1505. Are you satisfied with the course of subjects which are taught?—Quite so.

1506. You do not think that it could be improved?—I do not think that we could make any material alteration in the present course of instruction.

1507. It is thorough, and it is not too high?—I do not think that it is too high considering the class of boys that you have to deal with, and considering the positions which they have afterwards to occupy. I think that they get a very fair education.

1508. Are you satisfied with the industrial education which they receive?—I do not know much about the industrial education; they used formerly to make their own clothes and their own shoes, but they do not make their own shoes now; they are however taught to mend their own shoes and to make their own clothes.

1509. I suppose that considering their position it is desirable to teach them a trade?—Decidedly so. I should introduce other trades. I should do away with the shoemakers' shop, and I would have more tailoring. I also think that they might be taught carpentry and telegraphy.

1510. Are you assisted by a staff of under masters?—Yes.

1511. How many?—Four.

1512. How many pupil teachers have you?—13.

1513. The pupil teachers are not those who come from the normal school?—Not at all.

1514. That is quite independent?—Yes, the pupil-teachers are admitted by competitive examination, they may be soldiers or they may be civilians; they must be 17 years of age, and they remain with us until they are 20 years of age.

1515. What generally becomes of them?—They all go out as army schoolmasters afterwards; they pass into the normal school from the model school.

1516. And then they are returned back upon your hands?—Yes, for six months or for 12 months, as the case may be.

1517. Do most of the boys enter the army after they have left you?—I think only about two-thirds do so.

1518. From the evidence which we have had, they appear to turn out pretty well?—I think that on the whole they turn out exceedingly well.

1519. Do you think that as a class they are healthy when they come to you?—They appear to be very healthy.

1520. Have they good constitutions?—So far as I have been able to judge, most of them appear to have good constitutions. We have noticed a great change in a boy when he has been away for a year; he has grown and has been fully developed, and is altogether a different boy in appearance.

Normal School.

1521. As an observer, are you satisfied with the normal school?—Not at all.

1522. Do you think that it is of any good?—I think that it might be entirely done away with, and such has been my opinion for the last three years.

1523. To what do you attribute the fact that so few applicants present themselves for admission?—There are several causes which have led to this; one is the reduction of pay;—the original pay was 4*s.* a day, but it was afterwards reduced to 3*s.* a day;—another is the alteration in the dress.

1524. The pupils from the normal school are passed on to you after they have obtained a certain training in that establishment, and they frequent your school for the purpose of receiving from you instruction in the art of teaching?—Yes.

1525. Is that of any service to them?—Decidedly; you cannot have a schoolmaster unless you train him to teach.

1526. But if you wish to train a schoolmaster to teach men, is the enabling him to teach boys the best thing which you can do for him?—I do not think that it would make any difference; in my opinion it would make no difference whether he had to teach men or to teach boys.

1527. (*Lord de Ros.*) That is to say, in teaching persons of that class?—I do not care what the class is.

1528. (*Chairman.*) Are those students to whom you have referred generally well-conducted lads?—Upon the whole they have been so, but the place has altogether gone down in tone.

1529. What is the reason of that?—I attribute it principally to the soldier element; the civilian element has gone off, and the soldier element has been introduced, and we have not always got the best soldiers into the establishment.

1530. Do you think that the soldiers often resort to teaching as a refuge from other duties?—I cannot say. I have never heard that they have done so, and I should think that they do not. I do not suppose that we get the best soldiers. I do not think that it is at all likely that a commanding officer would allow his best men to come to us.

1531. He would not allow his best men to be removed?—No. I should suppose that he would look upon it as a loss of power; he would say, "Here is a "good man and I shall keep him." I believe that when a good soldier wished to go to Chelsea the commanding officer would hold out some inducement to him to remain where he was.

1532. Would you limit the age of students who come from the regiments to a younger age?—You mean as pupil teachers?

1533. Yes.—I do not think that there would be any objection to that; the difficulty would be this. Supposing the normal school to be done away with, what are you to do with those pupil teachers when they attain the age of 20 years?

1534. If we abolish the normal school how are we to provide teachers for the army?—The plan which I propose is this. I would first of all admit civilians who had been a twelvemonth in one of the Government training colleges, and had passed an examination by the Committee of Council on Education; secondly, *soldiers not under the rank of sergeants;* and, thirdly, pupil teachers from the model school when they had attained the age of 20 or 21 years. The civilians should come to the model school for six months in order more fully to acquire the art of teaching. The sergeants and the pupil teachers, if it was considered desirable to give them such a training, should be sent at the cost of the Government to some establishment for six months, and they should then return to me for another six months; and on appointment as army schoolmasters, each man should be attached for six months either to a garrison or to a camp.

1535. Therefore the effect of that would be rather to increase the civilian element among the schoolmasters, and to diminish the military one?—Decidedly.

1536. And that you think important?—I certainly do. From all that I have seen of the military and of the civilian schoolmasters, there is no comparison between them.

1537. The evidence which we have had from the previous witness and others is in the opposite direction; he appears to think that a soldier after he has qualified is a better schoolmaster than a civilian?—From the experience I have had, especially of those soldiers trained by me during the last 10 or 12 years, I have been led to form a contrary opinion.

1538. (*Lord de Ros.*) You must recollect that he is a schoolmaster for a particular class of persons?—For the soldiers.

1539. (*Lord E. Cecil.*) You have sent in some papers to the Commission, and you have mentioned certain correspondence which took place, which I will not specify. Are you quite satisfied with your position at present in relation to the authorities at Chelsea?—Not at all.

1540. You have mentioned certain grievances with regard to saluting; do you think that those grievances could in any way be altered except in the manner which you have specified?—These grievances do

ow exist to the same extent as they did when that tter was written; they existed very decidedly for bout two years. I brought the matter under the pecial notice of the Council of Military Education, and believe that some action was taken in the matter, and fter that *all* the sergeants did salute us, but some of he other servants of the establishment, as, for instance, he pioneer and company corporals,—those with whom e come into contact daily—do not take the slightest otice of us, even now.

1541. When you speak of sergeants, are they not menable to military discipline; they have retired, have hey not?—They are discharged soldiers, and consequently are, in all respects, civilians.

1542. Therefore they are not subject to the rules f military discipline?—Not at all.

1543. (*Lord de Ros.*) They have pensions, have hey not, and are so far under military control?—Some of them have pensions.

1544. Most of them have pensions, have they not?—I should think so.

1545. (*Lord E. Cecil.*) But I suppose that it would e a matter which would be very easily changed for he better; a simple order from the authorities would e sufficient, would it not?—An order was issued in 1847 by the Secretary of State for War and the Commissioners of the Asylum, and that order was in existence until the date of the letter of 1866, when those persons specified in my letter refused to pay the slightest respect either to myself or to Mr. Dexter, or to any other of the masters, because I found fault with them for neglecting their duty.

1546. In what way did you find fault with them?—The boys came up to school with very dirty hands and faces, with their flesh dirty, and with vermin in their heads. I sent these boys as a matter of course to the sergeant of the company, and the sergeant of the company was very much annoyed that he should be found fault with in this way. I reported it first to the Adjutant, and as the evil still continued, afterwards to the Commandant. The Commandant was as much dissatisfied with what I had done as the sergeants, and from the action which he took upon the matter it was evident that he regarded it in the same light as the sergeants did.

1547. Are you in any way under the direction or superintendence of the Adjutant?—Not in any way.

1548. If you find fault with the sergeants, do you report to the Adjutant or do you report straight to the Commandant?—I report to the Adjutant. I have never made a written report. I generally see the Adjutant. We are supposed to be on friendly terms with each other, and I bring the matter under his notice.

1549. The sergeants are not in any way under your orders; you have no power over them?—Not any.

1550. And I suppose that if they are not respectful towards you in the ordinary performance of their duty, that is apt to give the boys a very poor idea of discipline?—Most decidedly. I am sorry to say that we have found that to be the case. For about 12 or 18 months after the issuing of the new order in 1866, we found nothing but disrespect paid to us throughout the establishment.

1551. Was that encouraged in any way by the sergeants?—That I cannot say, because it did not come directly under my notice.

1552. Why was no action taken in the matter when you made these complaints to the Commandant?—Because the Commandant did not think it advisable to do so. In fact, when my letter was sent to the Commissioners I was requested to withdraw certain expressions from that letter before being laid before them or being read, which I refused to do.

1553. (*Lord de Ros.*) Do you think that it is possible that any non-commissioned officer who is used to the inspection duties of a regiment can possibly pass boys with vermin on their heads and who are dirty in their persons without discovering it?—He might not discover the actual vermin.

1554. But he must observe the dirty appearance of a boy?—Certainly; the dirty appearance would be self-evident.

1555. (*Dr. Butler.*) I gather that you attribute a good deal of evil to the increased age at which the boys now join the school?—Most decidedly, as regards the education of the boys.

1556. Does that objection also apply to the moral tone which they in consequence introduce?—That is not so self-evident.

1557. However, you would wish that all boys should be admitted at an earlier age, or that if a later age were taken some educational test should be adopted?—Yes.

1558. You attach great value to that?—Yes. What is done at present is not fair to us as masters.

1559. With regard to any religious influences which are brought to bear upon the boys, would the boys look for them chiefly to yourself and to the other masters or to the chaplain?—It is difficult to answer that question; the boys look chiefly to the chaplain, but I believe that our system of religious instruction has a wonderful influence upon the character of the boys. The chaplain devotes his attention specially to the inculcation of the prayer-book and the catechism; he does not give any religious instruction in the school beyond the teaching of the catechism, the exercises in the Sunday school, and the religious services in chapel.

1560. Is instruction given in the Scriptures?—Yes, daily.

1561. In giving that lesson are you in any way responsible to the chaplain?—Not in the slightest degree.

1562. We have understood from the chaplain general, that in some regiments special child's services are introduced on the Sunday; do you think that anything of that kind might be introduced with advantage for your young charge?—I think that the service might be shortened, it is much too long for the boys.

1563. Would you like to have any other change beyond the abbreviation of the service?—I think not.

1564. I think that you have said that the behaviour of the boys is not satisfactory?—It is not at all satisfactory.

1565. Who is supposed to keep order among them?—The Commandant, or the Adjutant under the Commandant.

1566. I gather from your evidence generally, that you do not think that the discipline of the establishment gains by being in the hands of the military authorities?—Certainly not. I think that we should do a great deal better without the military element.

1567. Do you think that thorough quiet is secured at the time when the boys go to bed, so as to give them time for private prayers?—There is little or no quietness, but rather the opposite.

1568. You would of course attach great importance to their obtaining that quiet?—Certainly.

1569. Do you think that there would be any difficulty in obtaining it?—Certainly not.

The witness withdrew.

Adjourned to Tuesday next at 12 o'clock.

Tuesday, 22nd March 1870.

PRESENT:

THE RIGHT HONOURABLE LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LIEUT.-COLONEL SIR CHARLES RUSSELL, BART., V.C.
LIEUT.-GENERAL SIR D. A. CAMERON, K.C.B.
MAJOR-GENERAL EARDLEY WILMOT.
MAJOR-GENERAL LYSONS, C.B.
C. S. PARKER, ESQ., M.P.
LIEUT.-COLONEL FLETCHER.
LIEUT.-COLONEL CHESNEY.

Col. W. R. Haliday.

22 March 1870.

School of Musketry, &c.

BREVET-COLONEL W. R. HALIDAY examined.

1570. (*Chairman.*) You are commandant of the School of Musketry at Hythe, and Inspector-General of Musketry?—Yes.

1571. How long have you been in your present position?—A little more than two years. I was previously for three years commandant in charge of the school of musketry then existing at Fleetwood.

1572. You are decidedly of opinion that the present establishment at Hythe is essential to the maintenance of a good system of musketry in the army?—I do think it essential. I think that there should be a central school to act as a normal school, whether at Hythe or elsewhere; that such a school is necessary in order to maintain the musketry practice of the army up to its present standard, and of course still more to promote its continued progress.

1573. You think that the same objects could not be attained by having that instruction communicated in the regiment?—No. I think that it is the diffusion from Hythe of trained instructors to the regiments which maintains the standard.

1574. Do you think that the present condition of Hythe (without referring to any minor matters) is satisfactory, and that the organization is well constituted?—I am not sure that if I were organizing it again I should not suggest some change in respect to the parties who are sent there. As the object is to train instructors, I think that sending privates to the school produces comparatively little benefit. The private soldiers can be perfectly well taught musketry in their regiments. I would have only commissioned officers and non-commissioned officers sent to Hythe. It is true that if the privates are intelligent, they are likely to become non-commissioned officers; but very often the men who are sent are dull, and I think that at one time the commanding officers picked out the worst shots as if in order to see whether we could do anything with them.

1575. Then you would keep the school at Hythe rather as a school of preparation for instructors than as a place through which to pass the rank and file of the army?—Yes. I think that it ought to be a normal school at which to train instructors only.

1576. Is it not an expensive process to send every year a considerable number of the rank and file to Hythe?—Yes; the travelling expenses are considerable.

1577. Have you any means of knowing how much they amount to?—No; that question does not come under my notice.

1578. How many of the rank and file of the army pass through Hythe every year?—On the average I should say that there are about 450 every year.

1579. Admitting your view to be correct, should you consider Hythe as the locality best fitted for a school of musketry?—It is by no means central, and therefore it involves greater expense in sending men there; but the question is, where ranges can be obtained. It is necessary to have ranges for the continued practice which is going on, and I am not myself aware of any other place affording these which is more central.

1580. I suppose that we are driven to the sea shore almost as a geographical necessity?—Yes; there must be either a wide common or a sea shore. In a mountainous country there are objections to ranges in valleys.

1581. Is that on account of the atmospheric effect?—No. I do not speak so much of that, but we seldom have absolute control of the ground. You cannot prevent the grazing of cattle and sheep, and you cannot prevent people passing, except by posting a number of sentries; whereas on the sea shore you have simply your danger flags on each side if the ground belongs to the Government.

1582. Do you think that the shooting of the army is a good deal inferior to what it ought to be?—I should say not on the whole.

1583. Are some regiments markedly behind others?—Yes.

1584. Can you trace that to any cause?—I think that these regiments have been placed in unfavourable circumstances, from their having been a long time from home without adequate instruction or assistance; and as a general rule we find such a material difference between the colonial regiments and others that it is obvious that those who are removed from inspection fall below the standard.

1585. Would the same marked difference exist between two regiments whose general condition and antecedents were identical?—Certainly a great difference would exist according to the interest taken in the musketry tuition by the officers.

1586. The shooting power of a regiment is a good deal affected by the interest which is felt or the superintendence which is exercised by the officers?—Very much indeed.

1587. Is the capacity of the musketry instructor who is attached to a regiment found to affect its efficiency?—Yes. In many cases my inspectors report, and commanding officers have found that a great increase in efficiency may be traced to the exertions of the instructor.

1588. At Hythe you have men in the marines, the militia, and in other branches of the service, have you not?—Yes, the militia and the marines send officers and the Royal Navy sends also petty officers.

1589. What is the number of officers at Hythe of all branches of the service?—Each course at Hythe consists generally of 60 officers.

1590. I am now including officers belonging to all branches of the service?—Yes; about 240 officers annually go through the course. An exceptional circumstance may occur where an officer is taken ill at the last moment before there is time to fill up his place, but the number which I have mentioned is the established number sent to Hythe.

1591. Is the accommodation and are the material capabilities of Hythe satisfactory for the purpose?—Not altogether; we have hitherto been obliged to make use of barrack accommodation at some of the small forts which are a mile or a mile and a quarter from the main barrack at Hythe, and that of course involves certain delays and certain difficulties. It would be very desirable if we could have all the men collected in the main barracks at Hythe.

1592. Is the sanitary condition of the place good?—I think that it is very good.

1593. (*Lord de Ros.*) You have alluded to the objections to private soldiers being sent to Hythe, excepting with the view of their becoming non-commissioned officers. There are no common sailors from the navy who accompany their officers are there?—I do not know the grades of the sailors who come,

e have a certain number of blue jackets who come
ere.

1594. Every petty officer has a distinguishing mark
e same as a serjeant in the army, has he not?—
nly see them in their undress. I think that the
ajority of them are petty officers.

1595. Supposing that no privates went to the school
Hythe, would there be any difficulty as to orderlies,
ntries and other duties upon which it would be
cessary to put privates?—It would be necessary to
ve a certain number of non-commissioned officers
d privates sent from Shorncliffe.

1596. You would not suggest instead of that to have
certain staff sent from the place? You prefer, as
understand you, having a temporary detachment
om the camp?—No, I do not know that I prefer
it acts equally well. We have now a corporal and
privates, in addition to our serjeant instructors,
t the objection would be that when men get into a
ed berth of that sort they almost invariably marry.
most the whole of our privates and serjeants are
w married, and we have sometimes a difficulty as
quarters, and a difficulty as to lodging allowance,
hich is frequently refused. I think that it is better
the whole that the men furnishing the guard, and
e orderly and fatigue duties of the barracks, should
sent from some regiment in the neighbourhood.

1597. Are you aware that a great many years ago
hen the German system of riding was introduced into
e cavalry, something in the nature of the school at
ythe was introduced for the instruction of the
icers and non-commissioned officers of the cavalry?
Yes.

1598. But after a certain time, when it was found that
at system had been thoroughly incorporated into the
giments, it was discovered that a great deal of it might
relaxed. Do you think that that is at all the case
regards Hythe?—No, I do not think that the
alogy would hold good. In riding I think that there
a certain standard, and that you cannot make any
provement in it. I do not think that there would
any great change in the riding of the cavalry by
eping up a school, but in musketry an improvement
continually going on. Musketry, I think, may be
mpared to billiard playing, or racket playing, in
hich a great deal of skill is obtained by practice.

1599. Then you think that a great deal depends
on an assemblage of numbers for the purpose of
ining?—Yes, the assemblage of course is for the
rpose of economising time.

1600. (*Mr. Parker.*) Do you think that the differ-
ce is very perceptible in the non-commissioned
cers who are instructors from the training which
y receive at Hythe, and that it is very much higher
an they would get in their regiments?—Yes, very
ch.

1601. You would expect that if the normal school
re done away with the standard would rapidly
l?—I will not say rapidly, but I think that it
uld considerably fall. I may add with reference
that point, that the superiority of the instructors
o have been trained and kept for some time at
the is so acknowledged that commanding officers
w constantly wish, when their regimental sergeant
tructor becomes non-efficient or disappears, to have
e of our instructors specially sent to them. I have
l a great many applications within the last six
nths, that is to say for the line; and there are
stant applications for the volunteers and the
itia. The serjeants who are discharged from one
the schools of musketry, or from the regiments,
ost always get an appointment of that sort.

1602. Is the supply of instructors from Hythe
the volunteers and the militia equal to the
mand?—I can scarcely answer that question,
use we receive a certain number of serjeants to
trained. They rejoin their regiments, and what
omes of them afterwards we do not know, unless
se men have certificates. With regard to the
itia and the volunteers, I apprehend that the
ply is not sufficient, because they frequently ask
for a serjeant to be recommended, they not having a competent instructor themselves.

1603. When they ask for a serjeant you sometimes are not able to supply a trained serjeant?—We are very seldom able to supply a trained serjeant. At the school at Hythe we retain merely the serjeant instructors of the staff; the other serjeants join their regiments and we have no further control over them.

1604. Is there a great demand for admission to the training school at Hythe?—I do not know that there is a great demand. The applications do not come to me, but they are sent to the Adjutant-General, and therefore I know only the numbers which come; but I sometimes have heard of and I have known several cases where individuals who have applied have been obliged to wait for six months before a vacancy could be found for them.

1605. If you were relieved of some of the privates who come to you, could you take a larger number of officers?—No, because at present there are not quarters for the whole sixty who come, but the Adjutant-General distributes the proportion so as to allow of about 16 officers, either of the militia or of the volunteers, who would get lodging allowance in their own regiments, so that it creates no additional charge to the public. Other officers of the line coming in excess of the quarters which we have at Hythe, would of course be obliged to be provided with lodging allowance.

1606. In the summer course do the men ever live under canvass?—No.

1607. Would the place be suitable for it?—No, for many reasons it would not be suitable. One is, that there would be a great difficulty as to water. In order to place the men under canvass they must be placed at a long distance from the barracks.

1608. Do you consider the examination and the certificates dependent upon it to be an important part of the system?—Unquestionably. Without the certificates I think that there would be no guarantee that officers acting as instructors in their regiments were competent.

1609. And without the school at Hythe you would require some other system of examination?—Yes. I do not know how it could be carried out, except by ordering up officers for the purpose, or sending officers perambulating the country to examine them.

1610. In supervising the musketry practice, is there found to be any tendency to depart from regulations?—Yes, occasionally there are slight deviations from the established system. These give advantages to men; there is a disposition in a regiment not to be hard upon a man losing his chance of a prize by a single point, or something of that sort, and I am quite convinced that without a system of inspection, independent of the regimental system, the proficiency could not be kept up.

1611. Do you think that the competition of regiments is a valuable stimulus?—I have no doubt of it.

1612. And without central supervision such comparison of regiments would often be illusory and unfair?—Yes. With reference to my annual reports, the classification published, more particularly of late, would not be reliable. If you refer to competitions between regiments distinct from the course, which are not unusual, and which in India are still more common, those are superintended by a committee of officers selected upon the spot, and those meetings in India have been productive of very beneficial results.

1613. The publication of the figure of merit, I suppose, has had considerable effect?—Yes; but I do not attach so much importance to that figure of merit, because it is absolutely impossible for different regiments to practice under exactly equal conditions or circumstances. Therefore it is not an absolute standard as to the qualifications in shooting each regiment.

1614. Do you think that the extra pay to marksmen is valuable?—Very much so.

1615. Would it be possible fairly to administer that grant without central supervision?—I should say that it would be quite impossible.

Col. W. R. Haliday.

22 March 1870.

School of Musketry, &c.

1616. Could it be left to commanding officers?—No; the only way that could be done would be to allot to each regiment a lump sum; but even that could not be fairly done, because the amount of money to be allotted to each regiment ought to depend upon the number of men who are effective with their rifles, and the War Office in making such a grant would have no means of arriving at that fact.

1617. Upon that plan, men drawing extra pay in one regiment might be very inferior as marksmen to men drawing no extra pay in another regiment?—There is a definite standard. If the regiment has a larger per-centage of marksmen than the proportion allowed by the War Office we take the men who have qualified in order of merit, and recommend those highest on the list, until the number to whom prizes are allowed is made up, so that in some regiments a considerable number get no pay.

1618. Are there regiments which fall considerably short of their full number of marksmen?—Yes.

1619. Then in such a regiment it would be a waste of public money to give it to the best shots if they were not up to the mark?—Yes; one regiment with very inferior shooting might get the same advantage as another regiment which was twice as efficient.

1620. (*Sir D. A. Cameron.*) I suppose that the non-commissioned officers who are sent to Hythe for instruction are selected by the commanding officer?—Yes.

1621. Are they selected upon the principle of intelligence?—They ought to be so.

1622. Are you satisfied with them?—Yes, on the whole.

1623. With regard to the returns connected with musketry practice which are required from regiments do you think that their numbers are unnecessary. I believe that there were complaints from commanding officers upon the subject?—I know that some of these returns were intricate, but within the last year we have simplified them very much. A committee sat at the Horse Guards about 16 or 18 months ago, by whom various suggestions which we had drawn up at Hythe for alterations in the course, and especially as regards the returns, were submitted to His Royal Highness the Commander-in-Chief, and they were incorporated in the present musketry regulations.

1624. You do not think that those regulations admit of any further modification?—No. The object of the returns is that they should be a record of the actual performances of the men, and unless the figures given afforded some means of check as well as the appended certificates of the officers who had witnessed the performances, I could not admit them as reliable.

1625. Through what channels do those returns from regiments reach you?—At home through the inspectors of the districts where the regiments are. From abroad, if there are no inspectors, they come direct.

1626. Are they not seen by the officers commanding brigades, or districts, before they come to you?—Not necessarily. The inspectors of musketry, who understand the whole system, and have witnessed the performances, have the means of checking irregularities and inaccuracies, and they then report to me. But officers commanding districts would have no means of knowing these unless they made a point of attending at the regimental practices, which they could not have time to do. It requires a long time to see the practices of a regiment to any useful extent, and then to examine the returns occupies perhaps in a single regiment eight or ten hours.

1627. Do you make comments upon the shooting practice direct to the officers commanding regiments, or do you give an opinion as to the musketry practice to the Commander-in-Chief?—I receive monthly from all regiments in my district a diary of their performances, and I always remark upon any inaccuracies or deficiencies which appear. We always keep a note of any irregularities in these, and of those which the inspectors have previously reported.

1628. All those matters are entirely settled between you and the commanding officers of regiments without their going through the Adjutant-General's department?—Yes, until the returns have been scrutinized by me; but then all the annual returns and applications for rewards go up to the Adjutant-General, and they require to be approved of by the Commander-in-Chief, and they are then forwarded to the War Office.

1629. (*Maj.-Gen. Wilmot.*) Have you any idea how many trained officers each regiment contains on the average?—No, it is impossible to give an estimate of that, because many officers having passed through one of the schools and having obtained a certificate leave the regiment.

1630. You cannot, I suppose, state the number of trained non-commissioned officers?—No.

1631. Do you think that any rule obtains in sending non-commissioned officers to you?—The Adjutant-General, I presume, looks to the requirements of each regiment before detailing the parties, so as to equalize the proportion of trained men in regiments.

1632. Does the certificate which is given distinguish between the amount of knowledge which a man has, and the power of instruction which he has?—The certificate is in a certain form; there are three classes for officers—for serjeants one.

1633. Does a non-commissioned officer get a distinct certificate for being a good instructor?—Yes; the certificate which is issued to a serjeant is to the effect that he is qualified as a serjeant instructor.

1634. (*Lt.-Col. Fletcher.*) Do you consider that the duties required of a regimental or battalion musketry instructor are sufficient to justify his being taken off all other duty, and receiving extra pay?—Yes. It is difficult to say whether he is not occupied throughout the whole year, because that will depend generally upon the number of recruits who are coming to a regiment. In addition to superintending the annual course to be performed by each battalion, he has the charge of the training of all the recruits, and that goes on during a great part of the winter.

1635. Could not other duties be grafted on those which are required from the battalion musketry instructor?—I think that it would be impossible for him to do some of them.

1636. I allude to special duties?—If I am to understand by that, court-martial duties and attendance on boards and so forth, I should say not, while the course is proceeding, because he is engaged every day during the morning and the afternoon.

1637. During the whole year?—No, not necessarily, because it will depend upon the number of recruits which you have, but if he is to have any leave at all during the winter, it would give very little time during which he could be put on duty continuously. The regulations provide for his being put on duty when he is prevented from carrying on those of his special appointment.

1638. Comparing the duties of the district inspectors of musketry with those of the Assistant Adjutant or Quartermaster-Generals, do you consider that those duties are sufficient to occupy them?—Yes, there is a great deal of office work, and there is an immense amount of out-door work which they have to do in visiting the practices of the regiments in their district during the time when the annual course is going on, and they may be perhaps for days together with one regiment alone.

1639. In the event of other duties being required such as instruction in field engineering, could they be engrafted upon the duties of the district inspectors?—No, the district inspector is not an instructor, he is simply as the term implies, an inspector to examine and superintend and to see what is going on in the system upon which he has to report.

1640. In your opinion would it be preferable to carry on the regimental instruction by regiments, or by wings under field officers, rather than accordi to the present system by companies?—No, distinc not.

1641. What would be the objection?—If it we practicable there would be no use in a regimen

ctor; the supervision must be constant and the ...ntal instructor I think could not carry out this ...vision over more than two companies at a time ...factorily.

1652. Do you consider the present system of in...jion applicable for cavalry?—Yes, so far as ... is any utility in having cavalry armed with ...fle. The course which the cavalry go through ...y much shorter than it is in the infantry.

1653. What relations have the district inspectors ... generals commanding brigades and districts?—...district inspector sends up reports to the general ...r every month of the progress of instruction ...ghout the district, and he always reports to the ...al officer any deviations which he has seen from ...gulations throughout the regiments in his district.

1654. (*Lt.-Col. Chesney.*) You have spoken of the musketry instructor being occupied throughout ...rear, is not that partly owing to the recruits?—...s.

1655. Would not a sergeant instructor be sufficient ...e elementary instruction of the recruits?—No, ... not think that a sergeant instructor could be ...ed to have the sole charge. The training of a ... it is quite as essential as the annual course of ...rained soldier, and more so because it is of great ...rtance that his early instruction should be good. ... more difficult to make a man unlearn anything ...h he has learnt than to teach him properly if ...begin at once.

1656. Can you state what is the average time ...ng which the instructor is occupied with the ...al practice of the companies?—I should say at ...very least 13 weeks, and he must be occupied in ...minary drills for about a fortnight more. I con... that independently of recruits he must be occu... on an average for 20 or 21 weeks.

1657. (*Sir C. Russell.*) Assuming that there is to ... central school of musketry, do you consider that ...rshot would be a more fitting place for it than ...e?—No; in the first place, at present there are ... the ranges available at Aldershot without sus...ing the annual course of the division stationed ...; in the next place, I do not know that it would ...esirable to have a school of the sort which we ..., to be kept in proximity to a camp where you ... so many inducements to idleness and companion..., and where I think great difficulties would be ...d as to accommodation.

1658. Then you do not think that at Aldershot it ...ld be possible to carry on a school separated from ...camp?—I do not think that at Aldershot there is ...n to provide ranges for the school in addition to ...e which are required for the camp; and besides ... it would require the building of a complete ...ack with lecture rooms, armories, &c.

1659. What number of ranges would you require ...the simple use of the school?—We should require ...the simple use of the school at least 10 ranges, and ...des that we must have ample space for skirmishing ...tice.

1660. Must each of the 10 ranges extend up to ...0 yards?—At present we do not require any ...ges beyond 800 yards. We do not with the present ... shoot beyond 800 yards; formerly we shot up to ... yards, but it was found that the Enfield rifles did ... carry with sufficient certainty to that extent, and ...h such ammunition as we have at present, it has ...n suggested that we should not shoot beyond 600 ...ds, because the shooting between 600 and 800 yards ...ncertain with the present ammunition.

1661. Do you consider that officers in regiments ...ld sufficiently qualify themselves to enable them to ... up to the school of musketry and to be examined ... a certificate?—I doubt it. It is possible that one ... two officers, here and there, might do so, because ... course at Hythe is in its main features precisely ... same as the annual course in the regiment. If an ...cer had acted as instructor in his own regiment ... had practised all the various exercises required, and had acquired a certain amount of knowledge of all the subjects of the musketry regulations, he might do so.

Col. W. R. Halliday.

22 March 1870.

School of Musketry, &c.

1662. Do you see any objections to the officers of the army being permitted to send in their names and to be examined, and that provided they could go up to the first class of certificate it should be given to them?—It would not be practicable without a complete change in our mode of examination. The examination of every officer at Hythe occupies some weeks. He is examined in his drills, and his power of lecturing, and so on, and this cannot be done in one day, but it occupies a long period, and after that he is examined on the subjects of the regulations by printed questions on two different days. Therefore every officer goes through a double examination upon those points, and it occupies nearly the last month of the course. While they are carrying on the target and other practice by wings on alternate days, officers who are not going through the shooting practice are being examined for an hour or two in the day by the captain instructor or by the chief instructor. The results of these examinations are entered in the returns in which marks are assigned to them, and they have finally an examination for either two or three days by means of printed papers. Now, while officers might go through an examination by the printed papers, it would be impossible to examine them on parade, unless they were sent to the school of musketry beforehand.

1663. I believe that you are aware that in India officers have been appointed musketry instructors who have not passed through the Hythe course?—I believe so. I do not believe that it is at present done, but we have no control over that matter.

1664. I suppose that the district inspector can make but a very partial inspection in consequence of the shooting of different regiments taking place at the same time?—Certainly, he can only perhaps visit each regiment once or twice a month. He therefore sees the practice of only one or two companies, and only a portion of that practice; but by making his visits unexpectedly he very often discovers little deviations from the regulations which have been the practice of the regiment, and which are not corrected till he finds them out and checks them.

1665. For instance, there is one district inspector who has allotted to him the Cape of Good Hope, Natal, Mauritius, and St. Helena; how can he possibly perform his duties?—It is absolutely impossible that he can perform them efficiently. The officer there was one of my captain instructors at Fleetwood, and he is an extremely intelligent and active officer, and his visits are very frequent at the Cape itself; at Natal, I imagine that there are now very few troops; at St. Helena it was impossible for him to visit them; he visited the Mauritius periodically. At one time I believe that he went by a steamer, but I think that later the steamer was discontinued and that he had to go by a sailing vessel.

1666. Do you consider that the amount of ammunition which is allowed to the army for shooting purposes is sufficient?—I think that it is sufficient for the annual course of practice. But I conceive that it would be advantageous for men to be allowed to purchase ammunition at a cheap rate, although there are many situations where a regiment would not have an opportunity of doing more than the annual course.

1667. Do you think that any evil would arise from matches being permitted to be shot between regiments?—In separate stations and districts matches of that sort are not infrequent; in India they are pretty frequent. In India they are very much patronized by Sir William Mansfield and the officers of the different Presidencies.

1668. And they are permitted in England?—Yes.

1669. At Aldershot any one regiment would be allowed to challenge another?—Yes, with the permission of their brigadier.

1670. And would the authorities allow them their ammunition?—In those instances they must purchase their ammunition. Some few years ago a certain

Col. W. R. Haliday.

22 March 1870.

School of Musketry, &c.

amount of extra ammunition was allowed to be drawn by commanding officers, but that has been discontinued for the last year or two.

1661. (*Lord E. Cecil.*) Do you think that any modification in the number of officers on the staff at Hythe is possible?—Certainly not. In point of fact, if my idea of having more non-commissioned officers and fewer privates were adopted, the number ought rather to be increased, because the examination and teaching of these persons takes up so much of the time of the instructors that during the course they have scarcely an hour to themselves. Each captain has a wing, that is to say, 30 officers and 80 non-commissioned officers, and whatever is the proportion of rank and file. He is busy the whole day, and his subaltern equally so, assisting him, and during the last portion of the time the examination of the serjeants for certificates is extremely onerous.

1662. In the return which you have sent in to the Commission you have stated the number of officers and the number of the rank and file who passed through Hythe in a year. What number have you at any one time stationed there?—The number for one course is about 60 officers, about 70 serjeants, 70 corporals, and about the same number of men. That is not a fixed number, but I am taking what may be considered the average.

1663. To teach 270 or 280 persons you require five officers and 31 non-commissioned officers?—The number of non-commissioned officers employed in instruction is not 31 but 24. The others at the school are executive staff, one serjeant-major, one quartermaster serjeant, one orderly room clerk, one paymaster serjeant, one hospital serjeant, and two clerks in my office. The others as well as the officers are required in order to teach and to examine the parties effectively. The examination is a very laborious and tedious part of the work which the officers have to do.

1664. Do you not think that that is rather a large staff (if it be correct that there are about 280 students), which gives one officer or one instructor to every eight students?—It is only by knowing the details of the daily course of instruction and the amount of work that has to be done that you can judge of that. It is not a case of simple arithmetical distribution of so many instructors to so many students; but each class of instructors has its own distinct duties. The chief instructor commands as a military officer, and exercises a general superintendence over the whole of the classes and parties daily. He has also to deliver eight or nine lectures on specific subjects connected with musketry to the officers at intervals, to catechise them on these, and to examine every officer and hear him communicating the different drills, and also delivering the lectures given to the soldiers, and to hear them in their turn catechise on the subjects of the simple theory and cleaning arms, as also to examine the serjeants and make a detailed report of their qualifications for certificates as instructors. I may say, in short, that he has full employment, and that during the last four weeks or more of each course he is constantly occupied for at least five or six hours every day. Each captain instructor, with one of the assistant instructors, has charge of a wing consisting of one half of the officers and non-commissioned officers and rank and file composing the parties of each course. They superintend the whole of the drills to be performed and lessons given to these in the alternate days, and, at the conclusion of the preliminary drills, all the practice in shooting at the targets and in judging distance. The captains deliver to their respective wings the prescribed lectures, explaining and amplifying the subjects, of which the mere frame is given in the book of musketry regulations. On the intervening days they also direct the drills to be performed by and the general instruction given to the non-commissioned officers and men not on duty; and they have to catechise the officers frequently on the whole of the subjects in the musketry regulations, and hear them lecture until they acquire facility in doing so. Finally, each captain has to hear every officer of his wing communicating drill until he considers him to be examined and reported on by the chief instructor, and in the same way to examine every serjeant who is a candidate for a certificate, not only in drills, but in half a dozen other qualifications. The serjeant instructors are divided and allotted to squads and divisions, and are employed as drill instructors from the commencement of the course, and during the weeks when target and judging distance practice is going on, they are constantly occupied in a duty that requires the utmost vigilance and minute attention, that of keeping and checking the registers of these practices, watching the signalling and superintending the execution of the practice by each squad. They have also various duties to perform connected with the military discipline and conduct of the parties in their barracks, and the details of the parades, and thus have several executive duties as well as those of instruction. These serjeants, as well as the officers, are fully occupied for about six hours daily on an average.

1665. I suppose that you would hardly say that the work of a serjeant in superintending the teaching is very much harder than that of a civilian schoolmaster?—Yes; it is quite a distinct thing. An ordinary civilian schoolmaster may teach a class of 40 boys. They are not always under examination by him; but here a great deal of the work is in drill for the purpose of acquiring mechanical dexterity, and an aptitude is required to be possessed by the serjeant who is superintending the particular drill.

1666. Do you not think that by an enlargement of the classes and by a simplification of the drills you could do with a smaller staff?—I do not believe that the drills could be simplified.

1667. How many drills have you in a day?—About four, in addition to the other work.

1668. Do all the officers and the non-commissioned officers apply themselves to the work of teaching in the course of the day, or are they employed in other duties?—As a rule the whole of them are employed every day in the work of instruction; but occasionally the officers have other military duties to perform, such as being members of a court-martial, or of courts of inquiry, or boards of survey, &c. The serjeants, as I have explained in a former answer, have certain executive duties in addition to their instruction occupations.

1669. What is the proportion of officers and serjeants who are qualified for trained instructors as compared with the rest of the students in the course of the year?—With regard to the officers, I should think that the proportion is 80 per cent. With regard to the serjeants, it is not nearly so large. As compared with the whole of the students, I should say that the proportion of serjeants who take certificates is about half the number of those who come.

1670. I suppose that if the establishment at Hythe or any similar establishment were kept simply as a training school for instructors, the staff might be considerably reduced?—I think not.

1671. Are there not other officers who qualify besides those who qualify for the purpose of becoming instructors?—Yes, as for instance adjutants, but they all come in order to obtain the knowledge which is required for instructors.

1672. If the number of students were strictly limited to the number of instructors required for the army (leaving of course a small proportion in excess) would not it very considerably reduce the number of your pupils?—No, I think that the present number is not more than is sufficient if you take into consideration the number required for the militia, and the navy, the marines, and the volunteers.

1673. Do you think that all those men sooner or later become instructors?—No. Many when they have obtained their qualification leave the army as an opening occurs to them.

1674. How many of the pupils in the course of a year are sent back to their regiments from not having

power or ability to qualify?—I cannot say the ict proportion, but in every course there are a tain proportion who obtain no certificates.

1675. It does not follow that if an officer or a jeant goes through the prescribed course at Hythe, is considered to be qualified to be an instructor? By no means.

1676. But, as a fact, much the largest proportion of se who do go qualify?—Of the officers much the gest proportion qualify, but of the non-commis- ned officers the largest proportion do not qualify. r instance, it is not customary to give certificates corporals, though the course through which they will no doubt facilitate their obtaining certificates erwards. Of the serjeants who come to the school, hould say that not above one-half obtain certificates qualification, generally on account of their imperfect evious education, especially in arithmetic.

1677. We have had a good deal of written evidence th regard to lectures; do you think that they are essary?—Certainly. Some years ago there were ht lectures, and then the number was reduced to ir.

1678. Does not the value of lectures very much pend upon the ability of the lecturer?—Un- ubtedly.

1679. And it might happen that a dull or unin- esting lecture might be anything but profitable to e soldier?—That might be so, but the main prin- ples which are explained to him must be of use. course if an officer who lectured did not himself derstand the subject he would only confuse the men.

1680. You would not be in favour of reducing the mber of lectures and making them more periodical? No.

1681. I am speaking of regimental instruction?— great deal of the instruction by lecture applies to e recruit, before he commences his course of training, ing taught the principles of the motion of pro- ctiles sufficiently to make him understand what is the ect of a rifled arm, and what is the consequence of e ordinary physical laws that prevent any bullet avelling in a straight line. The object is princi- lly to enable him to understand that subject. The eory is explained to him in four lessons on four ccessive days. The trained soldiers are examined, are supposed to be examined in the course of the ar in order to see that they have retained sufficient nowledge to be able to apply it.

1682. I understood you to say in reply to a former estion, that it would be impossible to engraft any her duties upon those which the musketry instructor has already to perform. Are you at all aware of the amount of leave which a regimental instructor has?—He gets, I presume, his fair proportion of leave, the same as is given to the other subalterns of the regiment, and certainly not more.

1683. Do you think that the cases are very exceptional in which musketry instructors in regiments in England get six months leave?—I should be surprised to learn that in a regiment of the line they should do so. I believe that an officer gets a great deal more leave in the guards than in the line.

1684. I think that you have stated that there would be some difficulty in entrusting a serjeant instructor with the drill of the recruits?—There would be a difficulty in intrusting him with the whole charge of it, he is always employed in assisting.

1685. If a serjeant in a regiment is intrusted with the drill of the recruits under the adjutant, would there be any difficulty in intrusting the musketry serjeant with the drill under the adjutant? I am speaking of the drill which a serjeant imparts to a soldier under the superintendence of the adjutant; and I am comparing it with the drill which is imparted by the musketry instructor serjeant under the superintendence of the musketry instructor, and I wish to know the difference which you would draw between the two cases?—In the ranks the drill of a soldier is much more mechanical, and is much more easily imparted, and it is supposed to be under the superintendence both of the serjeant-major and of the adjutant. Before a recruit is allowed to join his company I suppose that he is pretty sharply looked after both by the serjeant-major and by the adjutant in order to see that he has acquired his drill.

1685*a*. Is there not a great deal of difference between the two instructors; the serjeant musketry instructor having been at Hythe, whereas the serjeant who trains the recruit in drill goes through no course whatever?—The serjeant who trains the recruit in drill has a great deal of experience. I never yet saw a drill serjeant who was not a long time before he acquired much aptitude in imparting drill. But the musketry instructor has a great deal to do besides the drill. The serjeant instructor of a regiment is required to be perfectly conversant with all the returns, he makes up a great many of the returns which have to be examined and vouched by the officer instructor, and which have to be transmitted to my office.

1686. Then you would rather put it upon the amount of duty which a serjeant has to perform than upon his incapacity for such a duty?—Certainly.

Col. W. R. Haliday.

22 March 1870.

School of Musketry, &c.

The witness withdrew.

BREVET-COLONEL R. B. HAWLEY, 60th Rifles, examined.

1687. (*Chairman.*) You command the 4th battalion f the 60th Rifles?—Yes.

1688. Are you of opinion that it would be advisable maintain the establishment at Hythe as an inde- endent school of musketry?—I do not now consider necessary.

1689. What advantages do you think would arise om its abolition?—Commanding officers would have at portion of their duty which relates to rifle practice ommented on by those who command them,—as are heir other acts.

1690. Independently of the expense which would e saved by the abolition of the school of musketry at lythe, do you think that the object which we have view might be better obtained by relegating the usketry instruction to the colonels of the regiments?—I think that the more it is left to the colonels of the egiments the better.

1691. If there was not some independent authority, would not it be difficult to maintain the standard of skill n the regiments?—Yes, I would have such authority t the Horse Guards.

1692. Of course the authority of the Horse Guards would have to secure the application of that standard y some system of inspection?—Yes.

1693. And that system of inspection would have to be conducted by inspectors who themselves would have to agree upon a standard?—I consider that one inspector would be sufficient. I think that an officer in the position of an assistant adjutant general at the Horse Guards would be sufficient for all the troops quartered in Great Britain and Ireland.

1694. And that officer by inspecting the regiments, and by requiring a certain number of returns, would be able to maintain a standard of efficiency?—Yes, by inspecting when he considers necessary, and by means of returns.

1695. There is a likelihood of a new arm being intoduced into the army?—We have it on trial now. We have been trying it to-day.

1696. Even admitting that it might be eventually desirable to abolish the establishment at Hythe, would it not be perhaps prudent to delay its abolition until instruction in that new arm had been communicated to the army?—I think that that arm is quite as simple as the one in use at present. I think that it will be an easier arm to obtain proficiency in than that which we now have.

1697. I suppose that there is only one way of pointing a gun?—Yes.

Col. R. B. Hawley.

22 March 1870.

School of Musketry, &c.

Col. R. B. Hawley.

22 March 1870.

School of Musketry, &c.

1698. Instruction is given at Hythe to other officers in Her Majesty's service besides those belonging to the army, namely, to the marines and officers of the army in India. How would the instruction which is now communicated to those persons at Hythe, if the school of musketry at Hythe were abolished, be in future communicated?—The marines have their battalions at home, and therefore it would be communicated to them in the same way as to ordinary regiments. I cannot speak with regard to the Indian service.

1699. Supposing that the establishment at Hythe were to be maintained as a normal school of instruction, have you any recommendations for its improvement with which you can favour us?—I must state that I have not been at Hythe, but from what I understand there is a great deal of what I may call "parrot" work there, namely, that they learn the red book by heart, but I speak under correction, not having been there.

1700. Do you think that it would be possible to impose other duties besides drilling upon the musketry instructors in the service?—Certainly.

1701. (*Lord E. Cecil.*) Would you make the systems of instruction depend entirely upon the colonel of the regiment, so far as alterations or modifications in that regiment were concerned?—If every colonel of a regiment was allowed to change his practice there would be no standard of practice.

1702. Then you think that inspection is absolutely necessary?—Yes.

1703. You would only remove the inspection from Hythe to the Horse Guards?—Yes.

1704. Do you think that the lectures are now appreciated by the men?—No, I am only in favour of lectures so far as regards the care of the arm, the cleaning of the arm, and the loading, and so forth.

1705. I presume that you are in favour of lectures being occasionally given?—Very rarely. I think that shooting depends more upon actual practice than upon theory.

1706. You think that the explanation might go on without a lecture?—Simple explanations only should be given.

1707. Do you think that the general result now is that the soldiers are inattentive, and that they do not understand the theory?—I think that they do not understand the theory; they understand cleaning the lock, and the rifle, but beyond that I do not think that they understand anything.

1708. The longer the lecture is the less is its effect upon the soldier?—Undoubtedly. Soldiers do not like lectures; the shorter and more simple the lecture is the more the soldier retains it.

1709. Which do you think is the most profitable, the officer's lecture or the serjeant's lecture?—The officer's lecture.

1710. You do not think that the musketry instruction could possibly be conducted under serjeants reporting straight to the adjutant?—Certainly not. I should wish to see the duties of the musketry instructor and of the adjutant combined. I should like to see a captain as adjutant and instructor, and a subaltern as assistant adjutant and instructor, and I think that those two persons would work in harmony.

1711. What amount of leave does the musketry instructor generally get, as compared with the other officers in the regiment?—More.

1712. How much more?—Abroad my musketry instructor thought that he ought to have leave every winter, and he felt himself aggrieved through not having it.

1713. And of course that falls hardly upon the duty officers of the regiment?—Yes.

1714. Are the musketry instructors content with their pay and position, so far as that matter has come under your observation?—Yes.

1715. As a matter of fact, have not most adjutants been to the school at Hythe and qualified themselves for musketry instruction?—My adjutant has not done so. They are now obliged to do so.

1716. (*Sir C. Russell.*) Do you think that, under the present system, the musketry instructor is too independent of the commanding officer during his course of instruction?—In the fourth battalion of the 60th Rifles I have always left the matter to the musketry instructor.

1717. Without any interference from Hythe or elsewhere?—I have had no interference.

1718. Do you think that if a portion of the practice was left to the selection of the commanding officer, it would be desirable: in this way, I mean that after you had got up to a certain point you might shoot as you liked?—No; but I would give each colonel a certain portion of ammunition, to dispose of as he pleased after the annual course was over.

1719. By your last answer I presume that you mean to imply that the present amount of ammunition which is issued is insufficient?—Yes, there is none allowed for match shooting.

1720. I see that you have a very large per-centage of marksmen, and in your paper you say that in every case a register should be kept by the officers?—Yes.

1721. Do you think that with so large a proportion of marksmen your figure of merit would have been higher had all regiments kept their register in the same way as you have done?—Yes.

1722. Therefore the system of district inspectors is not a complete guard against the register being improperly kept?—It is not.

1723. Do you think that the rewards for marksmen are now fairly distributed?—Yes; but I would revert to the old system of a man receiving his money daily, because there is then a little fund for him to fall upon, to buy tobacco, or blacking to clean his accoutrements. If he receives it in a lump sum, the soldiers in the company will expect him to treat them. There is another objection to it:—In 1869 we had 29·46 per-centage of marksmen. A large portion of those men who were marksmen did not receive their pay; but as casualties occurred, the best men went away and then other men got the pay of those who did not get it in the first instance. If you leave it as it is, namely, a daily pay, it is an encouragement for all the men to try to be marksmen on the chance of their succeeding when there are vacancies.

1724. (*Lt.-Col. Chesney.*) Am I to gather from a former remark of yours that under the present system if a commanding officer chooses to attend to his rifle practice, he is not interfered with in the practice of his battalion?—Yes.

1725. Regarding an observation which you make in your paper, with reference to the marksmen's pay, is it a defect in the present system that the number is limited?—I think so. A certain amount of money is allowed to the regiment. All regiments do not shoot up to the same average, and I think that if a regiment has 200 marksmen, it should receive more pay than a regiment which has only 100.

1726. (*Lt.-Col. Fletcher.*) Supposing that the plan which you propose were carried out, viz. that of giving the musketry instruction by the adjutant, and making that officer a captain, do you not think that there would be a danger lest such an officer should become too powerful in the battalion?—I think not. I propose that he should be relieved every three years. If he holds his appointment only three years he will have no undue influence.

1727. (*Sir D. A. Cameron.*) Do you admit that there is a gradual improvement in the shooting of the army under the present system?—I think that we have arrived at a maximum now, for though the "figure of merit" may be larger this year than last I doubt its value.

1728. You I suppose admit that there has been a great improvement since the institution of the school at Hythe?—There has been the greatest improvement. I was present in 1852 when the first Minie rifles were given to the army, and the way in which they were used was excessively slovenly. It required the school to set the matter going.

1729. What are your objections to the present

stem of inspection by the district inspectors, and hat advantage do you expect would arise from the spection being carried on by one officer; that is say, being carried on by the Adjutant-General's partment?—They are junior officers overlooking the ts of commanding officers, whereas the officers of e Adjutant-General's department would be nearer e rank of colonels of regiments.

1730. Would the inspection be as thorough?—I ink so. The inspectors do little, and if they arrel with the commanding officer you may say od-bye to the shooting of the regiment.

1731. (*Chairman.*) Why?—Because the colonel els that he is interfered with by a subordinate.

1732. Do you mean that the executive of the army so weak that it cannot control the personal temper the colonel of a regiment?—We all know what man nature is. The colonel is responsible to the ommander-in-Chief, and he does not like to be interfered with in the instruction of his men by a bordinate.

1733. What is the rank of the inspector?—He is a ptain; he may be a brevet-major.

1734. (*Lord de Ros.*) He is not a colonel?—No.

1735. (*Chairman.*) You imply that if the musketry spector were to make a report which was unfavourble to the regiment, and were in consequence to come to collision with the colonel, there would arise out that circumstance the contingency to which you lude?—Yes, the part of the inspector would be ken by Hythe, and the colonel possibly would think mself right, and then there would be a disagreeable ntact. The colonel is in a very responsible place, nd his authority must be weakened by his acts being any way controlled or commented on by a subrdinate in rank.

1736. Then you think that if the system of inspecon were to be conducted from head-quarters, and if superior officer were to be made inspector, and if ne inspection were to be conducted through him, the ritation which might arise out of a difference of pinion between an officer in an inferior grade and ne colonel, would be probably avoided, inasmuch as ne inspector under the Horse Guards would be ither superior in rank, or in the same position as he colonel?—Yes, and the fact of his coming from he Horse Guards would have very great weight.

1737. (*Mr. Parker.*) Are the men ever practised o fire with ball, lying down?—Yes, in the first-class anges, but unless a man passes out of the third-class e is never taught to fire kneeling. I think that that s a very great fault. I think that men should be aught to fire kneeling, whether they are second or hird class shots, but I have men who have never been aught to fire kneeling. I have perhaps a dozen men who have never been taught to fire kneeling, and if hey were taught to fire kneeling they would probably make very good shots.

1738. If a man were a little weak in the muscles of his arms it might be difficult for him to make good practice standing, but he might be able to do it kneeling?—Yes.

1739. Is there any instruction in the Field Exercise Book, or elsewhere, as to the best position for firing lying down?—It is resting with both elbows on the ground, but if there is a stump or any rest you make the best of it.

1740. But the position is not described for lying down as it is for standing?—No.

1741. Would it not be useful to lay down a few principles in that respect?—No, I am in favour of a man lying down in any form in which he finds that he can fire best.

1742. Do you think that a little more ball practice in the lying down position would be practically desirable?—Yes, I am in favour of our getting more practice at the end of the season and letting the men be free to fire as they like. When a man can fire as he likes he will adjust himself into the position in which he can fire best.

1743. Could there be any saving effected in the amount of blank cartridge issued, if it were thought desirable to issue more ball-cartridge?—On such field days as we have had lately, I think that it would be absolutely necessary to have a greater amount of blank cartridge.

1744. (*Maj.-Gen. Lysons.*) Do you consider that the system of musketry instruction is, generally speaking, popular among the commanding officers or not?—I hear complaints against it.

1745. For what reason?—That in some cases they are interfered with. I myself have never been interfered with, and the regiment has always shot well.

1746. Of late years there has been an alteration in the regulations. Has that placed the musketry instruction more under the control of commanding officers?—There was a circular issued from the Horse Guards stating that position drill was to be left more to the discretion of commanding officers of corps, which order was I think immediately nullified by an order from Hythe, which took it out of the power of commanding officers to have position drill less than once a week.

1747. But you consider the more the musketry instruction is placed under the commanding officer the more popular it will be with him?—Yes, but I am in favour of having a general system throughout the army.

1748. If the school of instruction at Hythe were done away with, you would have to instruct your own musketry instructors?—Yes.

1749. Would you propose that there should be any standard of qualification, or any regulation, in order to make them all equally qualified?—I should leave that to the colonel of the regiment in the same way as the selection of the adjutant is now left to him, which is a far more important post, and for which no standard qualification is required.

1750. In the event of such a system being adopted, do you think that in all the different regiments in the service the instructors would be equally qualified and would be equally capable of giving instruction?—That would depend upon the talent of the commanding officer. If the commanding officer is not fit to choose a musketry instructor, I hold that he is not fit to command a regiment.

1751. If the qualifications of the musketry instructors varied, would not the regimental firing also vary?—If the firing of a battalion was to depend upon the musketry instructor only, it would not be worth much. The correctness of a company's firing greatly depends upon the interest which is taken by the company's officers.

1752. I allude more particularly to uniformity through the service?—Uniformity will be kept up any way.

1753. (*Sir C. Russell.*) Is there not uniformity of drill in the service?—It is especially ordered that it shall be uniform.

1754. (*Lord de Ros.*) Your objection to the inspectors is founded upon the military principle of not putting an officer of inferior rank over an officer of superior rank, is it not?—That is one objection.

1755. You consider that if the inspector were on the staff of the Horse Guards, he would be in the position of a staff officer of inferior rank taking an order to a regimental commanding officer, which of course would be readily obeyed, would it not?—The Horse Guards officer would probably be senior to most of the officers in the regiments.

1756. As regards the selection of the musketry instructors, is it not the fact that the commanding officer might be an admirable man for the management of troops and for the duties of the field, but might not possess a sufficiently mechanical turn of mind for musketry?—Musketry is practical; it is not mechanical.

1757. Would you object to the establishment at Hythe being constituted on the plan of being a normal school for officers only, and being used as a means of keeping up uniformity by comparing the qualities of the officers employed in instruction?—I

Col. R. B. Hawley.

22 March 1870.

School of Musketry, &c.

do not see what advantage that would be, because the moment they have been taught at Hythe they are drafted off, and there is no communication between them afterwards.

1758. But do not they afterwards carry with them the system which they have acquired at Hythe?—Yes; but a man of moderate intellect can learn all that can be taught at Hythe with his regiment.

1759. (*Chairman.*) You have no doubt that if the inspection were conducted under an officer of the Horse Guards there would not be found too much for him to do?—No; he would require one or two clerks.

1760. The work which is now done by the musketry inspectors you think could be as efficiently done by the one officer to whom you have alluded?—In my opinion quite so.

1761. Would he not have a very great deal of work to do going from regiment to regiment?—His inspections would only be occasional and when he considered necessary.

1762. Have you any further suggestion to make with reference to this subject?—I have not, except that I think that the method of determining the figure of merit is false.

1763. (*Mr. Parker.*) As a matter of fact, do the officers of companies pretty generally take an interest in the shooting by their men?—I can only speak for my own officers; they take a very great interest in it.

1764. Do you think that that is the same in rifle regiments?—I should think so.

1765. Do the officers themselves object to being put through the course of musketry?—That is not popular with them.

1766. (*Sir D. A. Cameron.*) You think that it is not necessary?—I do think it necessary until they are fully taught and capable of teaching others.

1767. (*Maj.-Gen. Wilmot.*) Would you make the pay which is given to the men for shooting dependent upon the opinion of the commanding officer?—Yes.

The witness withdrew.

Col. J. W. Thomas, C.B.

22 March 1870.

School of Musketry, &c.

BREVET-COLONEL J. W. THOMAS, C.B., 67th Regiment, examined.

1768. (*Chairman.*) You are in command of the 67th Regiment?—Yes.

1769. And you are of opinion that we might, without prejudice to the skill in musketry of the army, abolish the establishment at Hythe?—Quite so. I have a very strong opinion on that point.

1770. Supposing that that suggestion were adopted, I presume that you would consider it necessary to have a system of inspection?—I think so. I would have an inspector-general or some person representing him. Without that there would be a loss of similarity of practice, and money payments are dependent upon it.

1771. What staff of inspection would you consider necessary?—One at the Horse Guards, and deputies in such commands as the presidencies in India and the Mediterranean.

1772. Do you think that one inspector would be sufficient for the United Kingdom?—Yes, with a certain staff.

1773. What would this staff consist of?—There would be somebody in a similar position to a brigade major.

1774. Do you think that there should be an inspector-general of musketry and some person in the position of brigade major under him?—Yes.

1775. (*Lord de Ros.*) Should there not also be an aide-de-camp?—I do not know the rank assumed; the present colonel would not be entitled to an aide-de-camp.

1776. (*Chairman.*) As the present standard of shooting in the army now exists, do you think that it is up to the mark?—I think that it is fair, but I think that it might be improved. I should say that even now it is a fair average.

1777. Of course under your suggestion a considerable pecuniary saving would be effected?—Certainly, namely, in the school itself and the inspectors.

1778. And you think that the control which would be exercised by the superior officers would be sufficient?—Yes, it would be the same as the control of the Adjutant-General.

1779. You think that it would be as minute?—Yes. I see no reason why it should not be just the same as over the returns which are sent to the Adjutant-General.

1780. Do you think that the returns could be accepted without inquiry?—They would be accepted at head-quarters in the same way as any other returns.

1781. The reputation of a regiment for its superiority in shooting would then, in a great measure, be regulated by these returns; and the returns would be furnished by the regiment?—Entirely so.

1782. Do you not think that those returns might be more favourable than the facts authorised?—I think that the system would be more accurate than it is now. We should, I think, be more interested in making them accurate. If the commanding officer was on his honour, he would feel himself responsible. We do not now feel ourselves responsible. All that we say now to our musketry instructors is "You will be good enough to follow out your orders strictly." The musketry instructor and the district inspector are really the responsible officers.

1783. Do you feel that the musketry instructor is a foreign element?—No, except that he may make suggestions to which we cannot object.

1784. You think that if the system was superintended from the Horse Guards, and was not superintended by any extraneous authority, such as that of Hythe, it would be more uniform?—Yes, by it's being made a regimental responsibility.

1785. Do you think that it would be possible to impose upon the musketry instructor other duties than those which he now discharges; or do you think that his time is fully occupied?—When his time is engaged his time is fully occupied. In the winter, when there is no musketry, he has nothing to do.

1786. But when he is engaged in his special duties those duties occupy the whole day?—I should think so. I do not think that justice could be done to the musketry instruction if any other duties were given to him.

1787. Supposing that the establishment at Hythe were to be retained contrary to your recommendation, do you think that it could be improved?—I do not think that I should answer that question. I have never been there.

1788. (*Lord E. Cecil.*) I suppose that the district inspector is entirely independent of the regimental commanding officer?—Yes; he reports direct.

1789. In the case of a captain of a regiment being a district inspector, would not an inconvenience arise when his own regiment was quartered in his district, and might he not be placed in an antagonistic position to his commanding officer?—The district inspector of Aldershot is one of my captains, and he can report me direct to the Inspector-General for irregularity in my shooting.

1790. And whatever the good feeling might be between yourself and the district inspector, such a state of things might arise that would be very galling to the commanding officer?—I do not think that it is a position in which either of us should be placed with reference to one another.

1791. I presume that if you retained the rank of district inspector you would make him a field officer?—I have not thought of that question before, but I think that I should do so.

1792. Do you think that the district inspectors have now much to do?—I do not see any necessity for their doing anything. They have to correct the returns;

but if there were fewer returns, they would have less to do. They come to the ground occasionally to see that the practice is carried on correctly.

1793. In short, their office is almost a sinecure?—I do not know that they make it so, but I think that it might be made so.

1794. Would you engraft any duties upon the regimental musketry instructor which he has not now to perform?—Certainly not during the course. He has then as much as he can do; it is hard work, and it is fatiguing work. He is, I think, the hardest worked man, when he is employed, of any in the regiment.

1795. Has he more leave than any other officers in the regiment have?—No, he has the same amount of leave.

1796. You do not think it possible to combine any other office in the regiment with his?—I do not think so. That question has never occurred to me before.

1797. I suppose that the amount of duty which the regimental instructor has to perform varies in different regiments, does it not?—I do not see how it can do so.

1798. Some men may be more conscientious than others, and some may give a greater amount of lectures than others?—I have never heard anything of that sort. I think that they give a regular course.

1799. Are you in favour of giving a great many lectures in musketry instruction?—No. The men say that they do not understand them.

1800. Would you be in favour of diminishing the lectures?—I think that I would let them stand as they are. Some of the non-commissioned officers like them pretty well, but the men do not like them.

1801. (*Sir C. Russell.*) If it were left to you to select a musketry instructor in your regiment, do you think that it would be difficult to do so?—No.

1802. From your acquaintance with the army generally, do you think that there would be a difficulty in that respect?—No. The captains of companies cannot help learning the matter to a certain extent. The very routine of the work teaches them what is required. I cannot conceive that there can be any difficulty about it. I think that it would be now easier to get a musketry instructor than an adjutant, and that is easy enough in most regiments.

1803. (*Lt.-Col. Chesney.*) Speaking of the position of a captain as being a musketry inspector, is not one of your captains a brigade-major?—Yes, at Aldershot.

1804. If the district inspectors were subordinated to generals of districts, instead of to the inspector-general of musketry, would it make any difference in your system?—No.

1805. (*Lt.-Col. Fletcher.*) Under the present system of musketry instruction, has not the commanding officer a great interest in the good results of such instruction?—He may support it, or he may be known to be inimical to it, and which, if he takes a strong view, might affect the results.

1806. If he support musketry instruction will not the men in all probability shoot very much better and pay very much more attention to the instruction?—I do not think so. There is a certain amount of rivalry, and they will do their best. It depends more upon the captain than upon the commanding officer. In the first place, the commanding officer cannot properly attend to the matter; he has other work to do.

1807. Are not the commanding officers responsible for the instruction in musketry in their regiments?—Yes, theoretically.

1808. Practically are they not responsible?—No, it is not dependent upon us. We are very cautious in what we do. The district inspector might quietly say to us, "You must not speak to a man when he is "about to fire." There is a certain routine, but the commanding officer does not interfere.

1809. The first of the regulations for conducting musketry instruction is "The musketry instruction of "the troops, like all other exercises, is placed under "the responsibility of commanding officers, who are "to make themselves acquainted with this important "part of a soldier's duty." Is that practically carried out, or is it a dead letter?—It is carried out theoretically.

1810–11. Does not the commanding officer sign the returns of musketry?—Yes, he signs all returns.

1812. Are not the commanding officers just as much responsible for the instruction of their regiments in shooting, as for their instruction in drill?—Yes, theoretically.

1813. And are they not just as much responsible for signing the musketry returns as for signing the duty states or War Office returns?—Yes; as the paymasters' returns, for instance.

1814. In the event of the term of service in the army being shortened, will not the duties of those persons who instruct in musketry be very much increased?—Yes.

1815. (*Maj.-Gen. Wilmot.*) The regulations state that the musketry inspector is to refer anything to the general commanding the district, showing that, to a certain extent, he is under him?—Yes.

1816. Does not that remove him at once from being supposed to be an independent officer?—I look upon the musketry inspector as being in the same position as the staff. The opinions which are given are special professional opinions to a certain extent. It is a special subject; his position is different from that of an adjutant to a commanding officer. The commanding officer is a better judge of everything of which the adjutant is a judge, but he is not a judge of musketry, which is a matter of exact rule.

1817. Then you think that that ought not to be a special subject?—No; I think that it ought to be an ordinary regimental course.

1818. (*Sir D. A. Cameron.*) You admit that the course of instruction which is laid down by regulation is a good one?—Yes.

1819. Is it not a very important duty of the commanding officer to see that that system is properly carried out by the companies?—Certainly, but not personally.

1820. Then will not the skill and efficiency in shooting depend upon the commanding officer?—The commanding officer can very seldom go to the butts; he has too much to do.

1821 But still he can do so occasionally?—Yes.

1822. In every branch of the service is it not the duty of the commanding officer to make his men work?—Yes, directly or indirectly.

1823. I do not understand how the commanding officer can disclaim the responsibility attaching to him with regard to his duty?—He cannot superintend the matter. My men often had to go two or three miles off.

1824. Are the duties of a commanding officer so overwhelming that he cannot afford any time to go to the butts?—The time is an awkward one; it is in the forenoon; it is the drill time, and orderly time, and very often the firing is some distance from the headquarters. At Portsmouth it is across the water.

1825. (*Chairman.*) Your suggestion is to abolish the school of musketry at Hythe, and the system of inspection which is now maintained, and to substitute for it an inspector-general and some other officer; and you have enforced that suggestion by the consideration that under those circumstances probably the colonels of regiments would consider themselves more responsible, and would evince greater zeal, and would exercise a more vigilant superintendence. I do not think that those observations are quite consistent with what you stated to Sir Duncan Cameron?—I mean that the system should be regimental. I would make a major responsible to the commanding officer.

1826. Could not you do that already?—There is a delicacy as regards the district inspector if upon the ground.

1827. (*Mr. Parker.*) The duty of superintending the musketry instruction at present lies upon the commanding officer, does it not?—It is different at different stations. At some, field officers take it as a

Col. J. W. Thomas, C.B.

22 March 1870.

School of Musketry &c.

roster, but it is not done regimentally; otherwise the inspector should superintend.

1828. If the colonel were relieved from personal superintendence of the musketry, and if a major were personally charged with it, do you think that it would work well?—Yes, because the major is responsible to the colonel, and he has more time to attend to it.

1829. Where the butts are at some distance, the superintendence of the commanding officer is a dead letter?—Yes, on account of his other duties; but the major is expected to go there; he has a horse for the purpose.

1830. Of all the other officers in the regiment, would not a major have most time for the duty and also most authority?—Certainly. He would be the man to settle disputes between two captains, and to assimilate the practice.

1831. (*Maj.-Gen. Lysons.*) Your objection to the present system of musketry instruction I understand is because it is taken out of the control of the commanding officer?—Yes, practically it is not made purely regimental.

1832. If it were placed directly under your control, do you not think that it would still be advantageous to have well-educated musketry instructors?—Yes, in that particular branch.

1833. As different commanding officers generally direct their attention more particularly to one branch or another of their duty, if the establishment at Hythe was done away with, and if each commanding officer had the training of his own musketry instructor, do you think that all the musketry instructors throughout the army would be equally well trained?—I should think so; in the same way as regards adjutants, and more so,—because there is a more exact line for their guidance. After all, it is a technical and routine education. They learn by rote, and there is this book to guide them, which is as rigid as it can be.

1834. (*Lord de Ros.*) Reverting to Colonel Chesney's question, comparing the reports of the inspecting officer to those of an officer in the position of brigade-major, you are of course aware that a brigade-major never signs any paper of any sort or kind on his own responsibility?—He does not do so, except by order.

1835. If you had an inspector from the Horse Guards to superintend the whole concern, do you not think that it would be absolutely necessary that he should be a major-general or a brigadier-general, and that he should be entirely superior in rank to those persons whom he inspected?—Certainly.

1836. You have observed that the colonel would have the same facility of selecting a musketry instructor as of selecting an adjutant, and that there would be uniformity. Are you not aware that it would be difficult to find three regiments where the adjutants are of equal merit, or where the duty is performed in the same way?—Taking the general result, I think in half a dozen regiments it will be found to be pretty much the same.

1837. Do you think the inspection from the Horse Guards would produce that result?—Yes, I think that it would be a consequence.

1838. As regards the general superintendence of the lieutenant-colonel, you consider that the lieutenant-colonel of the regiment should have his eyes everywhere?—Certainly; he is responsible for everything.

1839. (*Chairman.*) If the Hythe establishment were to be done away with, how would you make your musketry instructors qualify?—There would always be an assistant. There is at present an assistant, and if the musketry instructor is absent he takes his place. I would continue him in his place, and of course the musketry instructor would take care, under the colonel, that the assistant was efficient and capable of performing the duty in his absence.

1840. We will presume that by some accident there is no assistant, or that the assistant dies and that the instructor is promoted,—you have then to supply two vacancies?—Yes.

1841. How would you qualify their successors?—I think that an officer of a company who had been through a few trainings after a little trouble would take the post.

1842. You would leave it to the colonel to select his officers?—Yes.

1843. You would have no general standard of qualification?—I would have it before the officer got his appointment by printed questions sent out by the Council of Military Education or some test of that sort.

1844. You would pass him through an examination?—Yes.

1845. But it would be a theoretical examination?—Yes, because the practical one would be shown by the results, and I would make the colonel responsible for it.

1846. If the officer turned out to be unsatisfactory, would you dismiss him?—I would dismiss him just in the same way as the colonel dismisses an adjutant.

1847. (*Sir C. Russell.*) Have you had any difficulty in getting officers in your regiment to go through the course at Hythe?—No; I have heard that some officers did not wish to go, but I have never had any difficulty.

1848. They have volunteered for it?—Yes, I have always had volunteers.

The witness withdrew.

Col. A. L. Fox.

22 March 1870.

School of Musketry, &c.

BREVET-COLONEL A. LANE FOX, Unattached, examined.

1849. (*Chairman.*) You lately belonged to the Grenadier Guards?—Yes.

1850. You had a good deal to do with the organization of the School of Musketry at the time of its institution?—Yes.

1851. Did you draw up the system of musketry instruction first adopted?—Yes, the one which was first adopted in 1854.

1852. How did you become to be connected with those arrangements?—It was in 1851 that I was first sent to Woolwich to conduct experiments in small arms, and subsequently to assist in instruction there under Colonel Brownrigg. In 1852 I passed four months on the continent in examining the systems in force in the French and Belgian services at Vincennes and at the camp of Beverloo, and I translated the official code of the Piedmontese army. Subsequently I drew up a system which was adopted in the Grenadier Guards, and which was afterwards laid before Lord Hardinge, the Commander-in-Chief, who sent for me and discussed the project of establishing a school of musketry in the service. Lord Hardinge also desired me to modify my system and render it suitable for general adoption, which I did. In 1853, when the School of Musketry was established, I was made First Instructor. A number of detachments from regiments were sent to Hythe and put through the course of instruction which I had drawn up. That system underwent some further revision and was published by authority in 1854, immediately previously to the embarkation of the troops for the Crimea. That was the first commencement of musketry instruction in the army generally.

1853. Of course you are acquainted with the present system?—For the last 12 years I have not had anything practically to do with musketry instruction, but I have had some knowledge of what has been going on.

1854. From being interested in the subject you have probably watched the progress which has been made?—I have.

1855. Should you be disposed to continue the establishment at Hythe as a school of musketry?—I think that when there is a school devoted expressly to the purpose of instruction it certainly ought to be better conducted than when there is no school.

1856. If it were determined to abolish the Hythe ool, on account of expense or for any other reason, you think that musketry could be as satisfactorily ght by the regimental system?—I see no reason y it could not be satisfactorily taught by the regi- tal system.

1857. But you have no strong opinion against the the establishment?—Not against the establish- nt of a school of musketry. I think that in some nts the school might be improved.

1858. Would not the musketry instructors have be qualified even if no regular school were main- ed?—Yes.

1859. If the regimental system were introduced w would you qualify them?—I would make them through a system of instruction in the same way adjutants qualify in battalions.

1860. How do adjutants qualify?—They act as utant for a certain time.

1861. When I talked of qualification I meant an icial one,—a regular official standard,—do you not nk that that would be necessary?—I think it would better.

1862. How could that be combined with the gimental system to which we are referring?—I do t think that it could be as well done without a ool of musketry as with a school of musketry, t I see no reason why it should not be done.

1863. Then in that way you would, probably, not ave it to any official standard, but you would leave it to the colonels of regiments to select musketry structors, and you would leave it to their zeal and eir anxiety to make their men shoot well, and so aintain a sufficient instruction?—I would do so to certain extent, but I think that the musketry in- ructors would be better qualified if they went through school.

1864. Then of the two systems you would prefer e maintenance of a central school?—If the musketry struction alone were concerned I think that it would advisable.

1865. In what respects would you improve the esent system, supposing it to be maintained in its esent features?—My impression is that greater ficiency would be produced by the men going rough a more thorough course and being more oroughly grounded in their first course as recruits.

1866. When you use the word "men" do you mean e rank and file?—Yes.

1867. We have had it suggested to us by one or wo witnesses of authority that it might not be ad- isable to send the rank and file to Hythe, but merely maintain the school at Hythe as a normal school; hat is your opinion in that respect?—I see no ob- ection to that in principle, but it would be necessary have a certain number of men there to go through he course, to enable the instructors to qualify.

1868. Therefore your last observation would apply o the men in the regiments?—Yes. I believe that he men should go through a thorough course in the irst instance, and that their annual instruction might e curtailed.

1869. I was rather referring to the establishment t Hythe as a normal school for instructors; have ou any observations to make in that respect, or do ou think that the present system is satisfactory?— see no objection to the present system.

1870. (*Lord de Ros.*) Should you approve of having n officers' school of musketry at Hythe, with a ajor-general upon the staff to inspect their qualifica- ions and to report upon them; do you think that that would keep up their qualifications?—Yes. It has been suggested that the School of Musketry should be transferred to Aldershot. If that were done, I imagine that whole battalions might go through the school at a time. In the event of a system being carried out regimentally, I think it better for a whole regiment to be struck off for musketry instruction at a time, as that would enable the commanding officer to superin- tend the practice, which he cannot do when companies are detached for practice.

1871. You lay great stress upon the immediate supervision of the commanding officer over musketry instruction?—Yes, I have always found that when a commanding officer has taken an interest in the musketry instruction it has been better conducted.

1872. (*Lord E. Cecil.*) What are your opinions with regard to district inspectors of musketry; would you retain them as they are, or would you do away with them?—I think that there should be some system of inspection. At present I think that a great deal of the time of the district inspectors is occupied in looking over returns, and that having large districts to inspect they cannot attend to the instruction itself. I think that possibly by a regimental system the returns might be curtailed, and that if inspectors were stationed at the chief practice stations they might superintend those stations instead of trusting to returns, and that all the regiments might pass through a course of instruction at those stations from time to time.

1873. Do you think that they conflict in any way with the powers of the commanding officers?—I do not see that an inspector need necessarily do so.

1874. But there is a possible danger of such a thing happening?—Yes.

1875. (*Sir C. Russell.*) Do you think that the present amount of returns which is insisted upon is necessary?—I think that the system of making a comparison between the reigments by means of the figure of merit entails a great deal of paper work, and a very rigid adherence to uniformity.

1876. Do you think that advantageous?—No. I think that if the conditions of firing were equalized in companies so as to enable a comparison to be made between the companies of a battalion it would be sufficient; there is a large amount of paper work and a rigid adherence to non-essential details, which is not desirable. That at least is the result of my experience, but I do not know to what extent it may have been remedied by the improvements introduced during the last two years.

1877. From your experience, do you think that any suggestions for improvement or alteration at Hythe are fairly considered?—At one time I thought not, but I do not know what the practice has been lately.

1878. You think that there was a considerable jealousy against any outside recommendation?—Decidedly so.

1879. How long do you think that it would take you to examine a man in order to judge of his qualifications for a musketry instructor? Would it take you a week, or a fortnight or a month?—I should prefer having a musketry instructor under my eye for some time. I think that in a mere examination there are many points through which I could put a man in an hour or two, but to know whether he was qualified as an instructor, and whether he could carry out his duty properly, he should go through his instruction for some time.

1880. Then you do not think it would be advantageous to allow any officer in the army to be examined for the appointment of musketry instructor without going through the course at Hythe?—I think that an officer should go through a course of musketry instruction. I do not think that he could do it by merely reading up.

1881. Under that supposition it would be essential to have a central school?—I think that it would be very desirable. If there were stations such as, for instance, at Aldershot, where a permanent superintendent was stationed, so that he should see the officers who went through the course, he would be competent to judge whether they were qualified or not.

1882. If that was done at Aldershot it could be done at less expense than at Hythe?—Yes.

1883. Are you aware of any advantage which Hythe possesses over such a place as Aldershot?—No, from what I know of Hythe, when I was there I do not think that it was so good a place for instruction as Aldershot. The ranges at Aldershot are better, and I think that it is altogether more convenient for the troops.

Col. A. L. Fox.
22 March 1870.
School of Musketry, &c.

1884. (*Lt.-Col. Chesney.*) I see that in your paper you recommend retaining the appointment of district inspectors. Do you see any objection to maintaining the district inspectors directly under the commanding officers of districts, instead of their being under the Inspector-General as they are now?—I do not. I carried on musketry instruction upon that system at Malta for some time under Sir John Pennefather, and I found that it succeeded admirably, and that the less interference there was from Hythe in the arrangements of the general commanding, the better it was both for the musketry instruction and for the discipline of the troops.

1885. Commanding officers have complained that the district reports are too much separated from the regimental reports. Could not the general in command of a district, with the aid of a musketry instructor, be able efficiently to supervise the present course of musketry instruction?—I think that with the aid of a musketry instructor he might.

1886. (*Lt.-Col. Fletcher.*) Do you know whether in foreign armies there are schools of musketry for the musketry instructors?—When I went abroad in 1852 they had a school of musketry in France, but not in Belgium; there was a great difference then between the two systems in France and in Belgium.

1887. You do not know what system they have now?—No.

1888. Do you know how the rifle shooting of foreign armies compares with that of the English army?—I cannot say at the present time. At the time of which I speak the English army was greatly in arrear of all foreign armies in respect to training.

1889. That was before the system of instruction was introduced?—Yes.

1890. (*Mr. Parker.*) Do you think that the men ought to be trained in shooting in the lying down position as well as standing and kneeling?—Most decidedly. It requires practice to fire properly lying upon the belly. I have often tried it with the men. Without practice men can hardly hit the target.

1891. A man might be a good shot kneeling, but when he tried to shoot lying he might miss the target?—Yes.

1892. And the details of the position are a matter in which instruction should be given?—Yes, the elbows should be properly drawn in under the body. In firing from walls and parapets also, the soldier should be taught to rest his body upon them and not his rifle.

1893. In your opinion is sufficient ball ammunition served out for all positions?—At present no more ammunition is given to the recruit than is given to the old soldier. Consequently it must take him some time to become qualified, and as long as that system continues I do not think that there is sufficient ammunition for all positions; but supposing that the recruit was thoroughly taught in the first place, and had say 150 rounds to fire in the first instance, I think that some portion of the ammunition might be reduced afterwards, or might be devoted to practising in other positions.

1894. And it would be good economy to serve out ammunition to the men liberally as recruits, but more sparingly in future years?—Yes; I think that a man does not lose his shooting, and that he would be more efficient by having been thoroughly taught in the first instance.

1895. Should you say that 90 rounds is too little to give a recruit confidence in his shooting?—Yes, because a man by firing only 5 rounds at each distance hardly gets the proper sighting of his gun, whereas if he had a sufficient number of rounds in the first instance to give him confidence in his weapon, firing from a rest if necessary, in subsequent years a comparatively small amount of practice would be sufficient to keep him up in his efficiency.

1896. (*Chairman.*) Have you any other suggestions to make with reference to this subject, except those which we have had the pleasure of hearing?—I would only say that with reference to the preliminary exercises, which I think very important, there is one thing which I have found very useful in giving the recruit confidence in these exercises as a means of improving his shooting, and that is to make every recruit fire a few rounds at two distances, say 200 and 300 yards, before he goes through a course of instruction, then put him through a course of preliminary exercises and make him fire immediately afterwards the same number of rounds at the same distances; compare the practice before and after instruction, and show him the improvement he has made. I have returns of these practices, not selected but showing the whole of the recruits trained at Malta during a given period; they show that the improvement was never less than two to one after instruction and often much greater. I found that by reading these returns over to the men it gave them great confidence in these exercises, so much so that I have seen several times more than half a battalion turn out voluntarily during the time that the course of practice was going on, to exercise themselves in the drills, aiming at the target, which is very different from the feeling that now prevails generally in the army respecting these exercises.

The witness withdrew.

Col. F. C. A. Stephenson, C.B.
22 March 1870.
School of Musketry, &c.

BREVET-COLONEL F. C. A. STEPHENSON, C.B., Scots Fusilier Guards, examined.

1897. (*Chairman.*) You command the Scots Fusilier Guards?—Yes.

1898. You are in favour of the maintenance of the establishment at Hythe as a school of musketry?—I am.

1899. You think that objections exist to its abolition?—I think so, as far as regards qualifying future instructors, and that they should pass through it.

1900. Would you recommend that the men of the army should pass through it?—No, but only the officer instructors and the serjeant instructors.

1901. You look upon it as a valuable school?—Yes, for that purpose.

1902. Do you think that any improvements can be introduced into the system? Do you think that it would be possible to simplify the instruction or to curtail the machinery?—Yes; as far as the annual course goes, I think that it might be shorter, and I think that the preliminary drills might be curtailed.

1903. Do you think that the staff at Hythe is capable of reduction?—I have never been there myself, and I am hardly acquainted with it.

1904. Some witnesses have pointed out a difficulty which arises from the fact that the musketry inspector, an officer of inferior rank, is called upon to report upon the efficiency, and it might almost be said upon the conduct, of colonels of regiments. What is your opinion in that respect?—That duty must devolve upon somebody of subordinate rank. Of course the chief officer could not perform that duty himself.

1905. It has been suggested that instead of having these musketry inspectors we should have an officer of superior rank from head-quarters, who should perform the duties which are now entrusted to the musketry inspectors?—I should doubt whether one officer could perform all the duties which are now performed by the musketry inspectors. They are upon the spot and can do more there than another person could.

1906. Do you think that the anomaly to which I have referred is of any practical importance?—No.

1907. You have not known any cases in which it has worked badly?—I have not.

1908. Do you think that it would be an improvement to remove the establishment at Hythe to Aldershot?—I think that it would be an advantage.

1909. (*Lord de Ros.*) We have had it stated to

one regiment, namely, the 67th, one of the captains in inspector, and that his colonel is virtually under inspection as to musketry; do you think that he uld be independent of his regiment?—Yes.

1910. Do you not think that by having an inspec--general for musketry, with a brigade major and an e-de-camp, the supervision would be more efficient? think that the supervision which is now carried by the inspector would be much better carried on in way.

1911. You would rather not have a captain from same regiment?—Yes, it strikes me as being jectionable.

1912. (*Maj.-Gen. Lysons.*) Would it be an improvent to make the inspector of musketry a part of the ff of the general officers of districts, and to pass the urns through the general officer of the district?—hink that that would perhaps be objectionable.

1913. (*Lt.-Col. Fletcher.*) Do not the confidential orts sent in by the inspecting generals contain reerts of the musketry efficiency of the regiments?—s.

1914. In the same way as they contain reports of y other efficiency in the regiments?—Yes.

1915. And therefore colonels now feel themselves sponsible for the efficiency of their regiments in sketry?—Yes.

1916. (*Lt.-Col. Chesney.*) Am I to understand at you do not think that that system would be adequate which confined itself to district inspectors under the general of the district?—No; my idea was rather that a district inspector would have two masters, by reporting to the general of the district he would be to a certain extent so far independent of the inspector-general at Hythe.

1917. (*Maj.-Gen. Lysons.*) If the inspector-general of musketry was made an officer of the Adjutant-General's department, would not that be an improvement?—Yes, my objection would then be done away with.

1918. (*Maj.-Gen. Wilmot.*) Supposing that the musketry school was at Aldershot, would not the objection hold good that the report must be made direct to the Horse Guards, instead of through the general; it would then be perfectly independent of the commanding officer?—Yes, but I do not see any objection to that.

1919. (*Lt.-Col. Chesney.*) Supposing that the present work of the musketry instructor was somewhat shortened, would it not be possible to utilise him for other work?—Yes.

1920. (*Lt.-Col. Fletcher.*) You think that it would be advisable to engraft other duties upon him?—Yes; you could not have a better man for it.

1921. (*Sir C. Russell.*) You think that for duties which are analogous the musketry instructor would be the proper person to perform them?—Yes, because the duties would never clash.

Col. F. C. A. Stephenson, C.B.

22 March 1870.

School of Musketry, &c.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Thursday, 24th March 1870.

PRESENT:

THE RIGHT HONOURABLE LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
LIEUT.-COLONEL SIR CHARLES RUSSELL, BART., V.C.
LIEUT.-GENERAL SIR D. A. CAMERON, K.C.B.
MAJOR-GENERAL EARDLEY WILMOT.
MAJOR-GENERAL LYSONS, C.B.
C. S. PARKER, ESQ., M.P.
LIEUT.-COLONEL FLETCHER.
LIEUT.-COLONEL CHESNEY.

CAPTAIN D. THOMPSON, 67th Regiment, examined.

Capt. D. Thompson.

24 March 1870.

School of Musketry, &c.

1922. (*Chairman.*) You are district inspector of usketry at Aldershot?—Yes.

1923. How long have you occupied that post?—I ave been at Aldershot for about four years and four onths. I have been altogether about 11 years district spector.

1924. Are you in favour of a permanent school of usketry at Hythe or elsewhere?—Certainly.

1925. Do you think that Hythe is the best place r such an establishment, or would any other place, uch as Aldershot for instance, be preferable?—Any ther place would do as well if they had the ranges. That would be the only difficulty with regard to any ther place.

1926. Would there be any difficulty about ranges t Aldershot?—I do not think there would be sufficient anges at Aldershot to accommodate the school of usketry and the troops which are usually quartered here. There are only 18 first class ranges at Aldershot and four second class, and they usually have 20 r more battalions firing.

1927. Would a difficulty arise from there not being space enough?—It would be simply from that. Of course they would require permanent buildings.

1928. That is a difficulty which we need not take into account.—There is no other difficulty that I know of.

1929. You have not gone into the question whether or not it might be possible to procure sufficient ranges at Aldershot?—No, I have not.

1930. Will you explain to us a little what kind of relation subsists between you, the musketry inspector, and the commanding officers of regiments which you inspect?—My duties are different rather from those of other staff officers of the same rank, inasmuch as I do not sign anything by order; everything that I do is done through the adjutant-general of the division where I am quartered. If I see anything has gone wrong on the ranges or in examining the returns, if it is a trivial thing I bring it to the notice of the commanding officer, either in writing or by speaking to him. I say, "Sir, on such a day I noticed a little irregularity; will you be kind enough to have it put a stop to?" If it were a matter of more importance, I should say in the monthly return which I send, "On such a day I visited the ranges and found such and such a thing going on." I make no remarks of any kind in the way of censure either to the commanding officer or to the instructor of musketry or to the captain in charge of the company. I am strictly prohibited from doing that by the inspector-general. I simply report the matter to the adjutant-general.

1931. What you report are facts, and not opinions?—Yes. I am not entitled to give an opinion without I am asked for it.

1932. Do you think that however carefully and discreetly those duties may be performed, it is conceivable that the commanding officer of a regiment might consider himself aggrieved if out of a report emanating from an officer of inferior rank to himself he were to receive a reprimand or anything approaching to a reprimand?—I think not more so than in many other cases. For instance, in the case of an assistant surgeon, the commanding officer might receive a reprimand in consequence of a report made to the principal medical officer; also in the case of

Capt. D. Thompson.

24 March 1870.

School of Musketry, &c.

a brigade major observing anything wrong at drill, it would be his duty to bring the matter to the notice of the brigadier commanding the brigade. In the case of a district inspector it is almost impossible, if he knows his duty and acts according to his instructions, that he can come into collision with the commanding officer in any way at all.

1933. As a matter of fact, you think that there is no jealousy of the musketry inspectors on the part of commanding officers?—I think there is; but it has arisen from what has occurred in years past.

1934. You think that now both parties better understand their relationship?—I think so.

1935. It is obvious that a certain amount of inconvenience might arise out of the system. Will you suggest any way by which such inconvenience might be obviated?—Nothing suggests itself to me.

1936. You are the representative at Aldershot of the school at Hythe, are not you?—I am the representative of the school of musketry. I am also there to see that the system of musketry as established in the service is carried on with uniformity through the division of which I have charge, entirely under the general in command of the division. My report is to him; I send one report to him, and a copy of it to the school of musketry. I am responsible really to the general commanding the division more than to the school of musketry. I report nothing to the school of musketry which is not sent to the general; there is no such thing as a private report or private information. There is nothing between the district inspector and the inspector general commanding the district that the general is not made aware of.

1937. Supposing that you reported certain deficiencies, would the authorities at Hythe communicate with you on the subject?—No, I should say not.

1938. Would they communicate with the general commanding the division?—With the Adjutant-General at the Horse Guards, I think.

1939. And he would communicate with the general commanding the division at Aldershot?—Probably. It is not usual for the Inspector General of Musketry to take any further notice after the general has once settled the question.

1940. Do the generals pay great attention to your reports, and take action on them?—Always.

1941. Supposing that there was no independent school at Hythe, and that instruction in musketry was given in the regiments by musketry instructors who were appointed in the same way as adjutants are appointed, namely, upon their individual merits, do you think that the standard of shooting would be lowered?—I think so.

1942. And that it would be less uniform?—You would lose all uniformity very shortly.

1943. How is uniformity now maintained?—Because all the instructors go through a similar course at the School of Musketry. In the course of their instruction the necessity of maintaining uniformity for the purpose of comparison is particularly impressed upon them.

1944. By maintaining uniformity you mean that men are to shoot in the same attitude?—Yes; that they are to go through the same forms, fire at the same distances, and go through a certain prescribed number of drills. Another thing is that you could not train a musketry instructor in the same way as an officer is trained for the duties of an adjutant. The duties of an adjutant are part of the every-day life of an officer. That is not the case with a musketry instructor. The musketry instruction is not going on in the same kind of way every day, and the officer has not the same chance of seeing it; in fact, it is only when his company is going through a course of musketry that he has an opportunity of seeing anything about it.

1945. The time of the regimental musketry instructors is not fully occupied all the year-round, is it?—It is not fully occupied, particularly now, when there are so few recruits.

1946. Do you think it would be possible to add to their duties as musketry instructors other duties?—Yes, I think so.

1947. Do you approve of the system under which regiments compete with regiments in shooting?—I think that that is questionable.

1948. Do you think that the returns which are furnished by regiments or battalions who are placed in competition with each other are always trustworthy?—I think that they are generally so. I do not think that they are always so.

1949. You are doubtful as to the advisability of regiments competing with each other?—It is very doubtful whether it is advisable that the averages should be published annually. I think that is a question, because the fact of the publication annually of the average obtained by each regiment leads in all probability occasionally to a little irregularity or unfairness in the compilation of the several registers and returns, and no doubt there is a desire, I will not say on the part of the musketry instructors so much as the non-commissioned officers, who are charged with the preparation of those documents, to make their corps a step higher than some other corps.

1950. I suppose the inspectors can hardly control those returns?—It is almost impossible that they can do so. The Inspector-General has generally the means of ascertaining within a short time whether a regiment is systematically shooting unfairly; by carefully examining the registers you can generally find it out.

1951. Would you recommend that the practice of allowing regiments to compete with each other should be abolished?—I should hardly like to pass an opinion upon the matter; it is a question more for commanding officers than for myself.

1952. In those cases where any irregularities in the returns have been detected, is it to be accounted for rather by the over-eagerness of the non-commissioned officers than by the connivance of the officers?—Yes. I think that the unfair marking has increased very much since the alteration which has been made in the regulations with regard to the keeping of the register; in fact it was at one time entirely stopped simply by the order in the musketry regulations directing that the registers of practice should be kept entirely by the officers. The officer sat with the register and kept it in his own handwriting, recording every shot himself. It is quite impossible to check at all when registers are so kept.

1953. Why was the system changed?—I think that it was changed by the committee when the new book came out, they thought it irksome on the officer; it was to relieve the officer of some part of his duty; some of the officers had complained of having to perform the duty.

1954. Will you explain how those irregularities occur?—It is no advantage to a man shooting in the first period, that is to say in the third class, first period, to make more points than will actually pass him out of that class into the second so as to enable him to compete for prizes, because the prizes are competed for by the aggregate points obtained in the second and first classes. Consequently after a man has made his 25 points in the third class (the number which passes him into the second class) he does not care for making any more, and he allows the sergeant of the company, if he is not honest, to record any points which he makes after that to the credit of other men. This is really a very common thing and it is almost impossible to watch the sergeants sufficiently, if they are dishonest to prevent their doing that. For instance, you have a man whom you know to be of regimental reputation a very good shot, he makes his 36 points, he does not care whether he makes any more or not, but there are other men, who have a reputation in the company as being very bad shots. The sergeant, after the first man has made his 36 points, records all his after hits to the known bad shots, by means of which he takes every man out of the third class, so that the per-centage of first class shots minus the third class shots is increased enormously, and that forms part of the average obtained by the company

1955. (*Mr. Parker.*) Do you think ricochets are often counted?—They are never counted in individual firing.

1956. But in volley firing?—They are allowed to be counted in volley firing. The hits are sometimes scored unfairly in volley firing, which also counts in the company's average; splashes of bullets that are not hits at all are occasionally scored, but not by a good musketry instructor. The difference between a fair hit and an unfair hit is explained in the musketry instructions.

1957. (*Chairman.*) Do you think it necessary to send the rank and file to Hythe?—No; I think that the higher class of non-commissioned officers such as colour-sergeants of companies ought to be sent.

1958. Do you think that the course at Hythe could be simplified at all, or reduced?—I think not so far as instructors of musketry go.

1959. It is not too scientific?—No, there is very little science about it.

1960. Do you think that the acquisition almost by rote of the formulas in connection with musketry instruction is necessary?—I think that is only necessary for an extra first class certificate.

1961. Do you think the whole system of firing a proper system as regards position and so on?—I think it is a proper system.

1962. You have no misgivings about it?—No.

1963. When you go to Wimbledon and see the volunteers making bull's eyes pretty fairly in every kind of attitude, it does not suggest any misgivings to you?—I do not think volunteers' positions applicable to military firing. We could not introduce them into the army except in the case of light infantry for skirmishing purposes, you could not put the men in those positions in line in close order. You must adhere to the old Hythe position.

1964. Skirmishing firing is a very essential part of military manœuvres is it not?—It is very essential now I should say.

1965. And in skirmishing the soldier might have to fire in any attitude?—Quite so, but you must always look to rapidity, a volunteer takes sometimes a very long time to get into his position.

1966. (*Lord E. Cecil.*) Suppose the very exceptional case of a district inspector stationed at Aldershot with his regiment and not being on very good terms with his commanding officer, do you think that any inconvenience would arise then?—I think not. I cannot see how it could, unless the district inspector went out of the regular course of his duty, which of course would be at once detected by the officer commanding the division or by the adjutant-general.

1967. You do not think that such a state of things would excite an unusual amount of jealousy on the part of the commanding officer?—I do not think so, and I can hardly understand how it could.

1968. Have you never thought of any plan whereby if the district inspectors were retained they could be put entirely on the staff and taken away from their regiments?—I have never thought about that. That would be an excellent plan, and also if you gave them some brevet or local rank so as to give them the position of field officers, that would be another great advantage.

1969. I see you say in your printed answers sent to the Commission, that you have great faith in the present system of theoretical instruction; do not you think that the advantage of that theoretical instruction very much depends upon the lecturer?—In a great measure.

1970. Some men though they take first class certificates at Hythe are by no means fit for the office of lecturer?—They have to pass an examination in lecturing before they get a certificate at Hythe, they have to lecture in the presence of the chief instructor of musketry; the lecture is very simple.

1971. Can the knowledge which is requisite in order to pass that test examination be acquired by rote at all?—No, I think not.

1972. Do you think there are too many lectures now?—No, they have been much reduced; they are only for recruits; eight lectures are kept up.

1973. What is the ordinary duration of a lecture?—About a quarter of an hour or 20 minutes.

1974. You propose that the instructor of musketry should be the assistant adjutant?—I think that the instructor of musketry should take the whole charge of the instruction of the regiment in arms, that is to say, bayonet drill, sword drill, and instruction in musketry, and also the simplest form of field works as applied to defending a place with the rifle or the bayonet.

1975. In short you are in favor of the employment of regimental instructors in other matters besides musketry instruction?—Exactly so. In some regiments it is the practice now. In the 8th regiment Colonel Robertson appoints as instructor of musketry an officer whom he intends to be his adjutant, on the condition, I believe, that he shall not hold the office for more than three years; they enter into that agreement.

1976. (*Sir C. Russell.*) In your printed answers you say, "I think however that the utility of the "establishment might be increased very greatly;" do you mean simply to the extent you have given in your 7th answer?—Yes. I consider that it might take charge also of the instruction of the other branches, that is to say, the sword exercise, the bayonet exercise, and construction of simple field works, things which are equally important to a soldier.

Appendix, p. 207.

1977. In the event of such an alteration being made as you suggest, do you think Aldershot would be a more fitting place for the school to be located in if the difficulty of ranges could be overcome?—I do not exactly see what difference it would make.

1978. Do not you think, with the engineer establishment and with the troops always at hand in large numbers, Aldershot would be a more judicious place for a school for such instruction than Hythe?—I hardly think the locality a matter of much importance, provided the instructors were really efficient instructors in musketry, sword exercise, and those kind of things; I do not think the position of the school would make much difference.

1979. You do not think where so much shooting is done, as is the case at Aldershot, it would be advantageous to have the additional superintendence which would be gained by a school of musketry there?—In one respect it would be an advantage; you might at once get rid of the inspector of musketry at Aldershot, because if a school of musketry were established there it would naturally take the supervision of the whole thing.

1980. If you removed the inspector general from where he now is you would not have to put another man in his place?—No, the inspector at Portsmouth would be quite able to superintend that district as well as his own.

1981. Do you think, with regard to competition between regiments, you would obviate the difficulty if the competition was between companies in battalions, instead of between battalions in the army?—If I abolished competition between battalions in the army I think I should also abolish it between companies.

1982. You do not think the rivalry and vigilance which would arise as between companies would be a very complete check on fraudulent returns?—No, I think not.

1983. (*Lt.-Col. Chesney.*) From your experience do you see any practical loss that would occur if the inspection of musketry was made simply a part of the regular district duties of the army without reference to any inspector general?—You would have to alter all the returns very much, you could not give so much statistical information as is now the case and as is required by the Commander-in-Chief.

1984. Could not the information be prepared at the Horse Guards from the district returns?—It would require an additional staff at the Horse Guards to do it.

1985. Would there be any deterioration in the

Capt. D. Thompson.

24 March 1870.

School of Musketry, &c.

general shooting of the army if a school like Hythe were retained merely as a normal school of teaching?—No, I think not as long as you enforce a system of uniformity throughout the army. Directly you abolish uniformity and admit a change in the conditions under which every regiment fires you run the risk of deteriorating the firing, because every commanding officer would introduce some system of his own which might be entirely fatal to good shooting.

1986. (*Lt.-Col. Fletcher.*) Supposing the competition between regiments done away with, do you think there would be any danger of the shooting deteriorating through the army?—I think not, if a good system of rewards were kept up as at present.

1987. If it were done away with the returns would be very much diminished?—Yes.

1988. And therefore the staff might be diminished?—And therefore the staff might be diminished.

1989. (*Maj.-Gen. Wilmot.*) I understood you to say that you sent a copy of your report to the general commanding the district and to the school of musketry; suppose that copy instead of being sent by you to the school of musketry at Hythe was sent to them through the commanding officer of the district, would not that obviate all possibility of ill-feeling or misunderstanding on the part of the officer commanding?—My return would be forwarded through the general to the inspector general. I do not think that would make any difference.

1990. (*Sir D. Cameron.*) Would it be possible for the brigade majors to perform the duties of district inspectors if they were obliged to go through the course of instruction at Hythe?—Certainly, if they understood the special duties of the district inspector as well as the district inspectors understood them, and if they had time to perform the duties; but I question whether they would have the time, and very possibly many of them would not be suitable for the special duties of the district inspectors. The district inspectors ought to be selected on account of their displaying some general aptitude for the position.

1991. Such men might be selected as brigade majors?—You take your brigade majors because they pass a certain examination at the Staff College; they might be deficient in temper and many qualifications necessary to make a good district inspector.

1992. You might get men competent to perform both duties?—You might possibly get them.

1993. You say you brought trifling irregularities in practice to the notice of the commanding officers, and that they generally took your remarks in good part?—I never knew an instance to the contrary in all my experience; they were only too anxious that I should bring everything to their notice.

1994. Do you think that that has been the case with all district inspectors?—I am afraid some of them have shown a very great want of judgment in former times by altogether mistaking the position in which they were placed.

1995. (*Mr. Parker.*) Would you recommend that the school of musketry should become a school of arms?—Yes, I think a thorough instruction in the use of arms should be given at the school of musketry with a slight instruction in fortification. When I use the word fortification I mean rifle-pits and abattis. Supposing a non-commissioned officer put on out-post duty on picket anywhere to be threatened by cavalry, it would be of very great importance that he should be able so to defend his position as to hold it for a certain length of time. There might for instance be timber growing near the spot where he was placed, and a little instruction would teach him how to utilize it so as to fix the trees and make a kind of abattis, and so hold the position against cavalry till he was reinforced, or till he could be instructed what next to do.

1996. Would you include the defence of a village and the loop-holing of a wall?—I would hardly go so far as that.

1997. Do you think in order to give instruction in those matters it would be necessary to prolong the course much, or could they be taught in the intervals during which musketry instruction is not going on?—I think it would be necessary to prolong the course a little, but those are such simple subjects that it would not be necessary to prolong it very much; a few days prolongation I think would do it. There is really very little to learn at the school of musketry, what they do now is more practical than theoretical; the theoretical part of it might be learnt in a very short time; and during the time that the men were going through their course there they might employ their leisure time in reading up the theoretical part of those subjects also.

1998. Then in your view the musketry instructor should become an instructor in the use of arms?—Yes.

1999. You propose that he should be assistant adjutant; would you look forward to the adjutants of regiments generally after a while being specially so qualified by the promotion of those assistant adjutants to the rank of adjutants?—Yes, it would encourage officers to study those subjects with the prospect of getting the adjutancy.

2000. So soon as the adjutants of regiments were qualified, would you make them responsible for the instruction?—No, I would always make the instructor of musketry responsible for those particular duties, because the present office duties and field duties of the adjutant do not give him time properly to superintend that part of the business. It is now too much entrusted to the non-commissioned officers.

2001. Would you make him responsible directly to the commanding officer?—Directly to the commanding officer.

2002. And not to the adjutant?—Not to the adjutant. I would separate their duties as far as that is concerned.

2003. Have you a decided opinion as to the superiority of the shooting of the British army as compared with foreign armies?—Yes, from information I have acquired from French and other officers, for instance, (merely in conversation, I have never been at their schools of musketry), I am quite convinced that their shooting is very inferior in every respect to ours.

2004. Does that apply not only to long ranges, but to short ranges?—It applies to both.

2005. Do you think that the superior excellence shown in the British army would be maintained without special training?—I think not.

2006. And you think in order to give that special training you must have a central school of musketry to keep up the standard?—Yes, I think so.

2007. (*Maj.-Gen. Lysons.*) The musketry returns are sent from the regiments to you at present?—Yes.

2008. And you check them?—Yes.

2009. Has the regimental musketry instructor any power of making any remark upon the returns?—No, not before they come to me. The commanding officer makes what remarks he thinks proper.

2010. Do you send them to Hythe?—No, I file them, that is to say, the monthly returns, then the annual returns come to me merely for me to see that they are correctly made up and in conformity with the musketry regulations. If they appear to me to be not so made up I say, "So and so appears to be incorrect, will you be kind enough to have it altered." I generally put on it in pencil what it ought to be.

2011. Then those returns go to the school of musketry?—Yes, those are the annual returns.

2012. If there is any remark to be made upon them, are they sent from the inspector-general of musketry at the school of musketry direct to the commanding officers or through the adjutant-general?—After the annual returns have been inspected by the inspector general, his remarks on them come to my office and I forward them without any remark of my own to the commanding officers.

2013. With the remarks of the director general upon them?—Yes, they are very simple generally, on most of them there will be merely "no remarks."

2014. If there was any remark it would go from the inspector general to the commanding officer of the regiment?—Yes, through me, in order that I may see whether there was any error in the return before sending it, that I had omitted to notice.

2015. Do you not think that the system of musketry instruction is to a certain extent unpopular amongst commanding officers of regiments?—I do not think it is now, but it was at one time very unpopular.

2016. Up to what period?—About four years ago.

2017. When the book was revised?—Yes.

2018. Do you think that if the normal school was separated from the superintendence of the musketry of all the army, and the latter was conducted by an assistant adjutant-general for musketry at the Horse Guards through a deputy assistant adjutant-general for musketry under the district general, it would be more satisfactory to commanding officers than the present system of sending to Hythe?—I think it would answer all purposes equally well, you would have one staff officer at the Horse Guards to assist the adjutant-general, and he would have his deputies performing the functions now performed by the district inspectors. I think such a system would answer perfectly well and would probably be more satisfactory to commanding officers.

2019. Do you think it would be advisable to give more latitude to commanding officers with regard to musketry practice than they have at present?—Then you would lose all uniformity, you could not safely take any liberties with the system.

2020. Might not they perhaps be allowed a greater length of time to carry out the musketry practice, and might not they be enabled to intermingle it with other drill?—That would be striking at the root of the system which is to confine the men whilst under musketry instruction to that particular instruction alone.

2021. You think it would be difficult to place it more under the control of the commanding officers of regiments than it is at present without injuring the system?—I do.

2022. At the same time is not the fact that no latitude is allowed to commanding officers, the cause of the system being rather unpopular?—I think its unpopularity arises more from tradition, from its having been introduced unfortunately in a rather unnecessarily severe way at first. The inspections were extreme, and the measures taken to insist upon complete uniformity were extreme.

2023. That was remedied to a great extent in the new edition of the book in 1867?—Yes, and more care has been taken probably in selecting officers to assist the inspector general; more care has been taken in the selection of district inspectors.

The witness withdrew.

CAPTAIN J. M. C. DRAKE, Royal Engineers, examined.

2024. (*Chairman.*) You are musketry instructor to the Royal Engineers?—I am.

2025. And you have also been for several years in succession the engineer officer in charge of the works at the volunteer camp at Wimbledon?—Yes.

2026. Are you in favour of maintaining Hythe?—I am. I think considerable alterations might be made in it.

2027. Will you state what alterations you would suggest?—I think it necessary to keep up Hythe as a school of musketry for the purpose of training officers and sergeants as future instructors. I consider that necessary because you must in my opinion have a fixed standard to go by if you intend to keep up uniformity of shooting or uniformity of instruction throughout the army. If you do not keep up a school of that kind for the instruction of instructors you will have small deviations made, the instructors of each regiment gradually making changes until they become regimental customs, and so you will have one regiment differing largely from another in its way of carrying on the detail of instruction. A regimental instructor in my opinion has quite enough to do already to instruct the men he has to instruct; he has no time to train either officers or sergeants to become instructors (I am speaking now of a lieutenant instructor in a line regiment, my own case is different). He has no time to train people to be instructors, nor in many cases is he competent to do so. I say this having had very considerable experience of, and very considerable acquaintance with, regimental instructors; they are not necessarily competent to train others to be instructors. My suggestions as to the alterations in the Hythe School of Musketry are merely at the present moment confined to the staff. If at Hythe you only train officers and sergeants for future instructors you would not require anything like so large a staff as you have at Hythe now. A great part of the time at Hythe is taken up in training private soldiers and corporals, of which I for one could never see the use, because the instructors should be the persons to keep up the uniformity and not the privates who are trained there, and who could be trained equally efficiently in their regiments. I would recommend that the staff should consist of a commandant who should also be chief instructor; if he had no men to train he would have no garrison or regimental duties. The chief use of the chief instructor when I was at Hythe was to command the garrison formed by the men who went there. Then I would have one or two captain instructors in proportion to the number of men sent there (I do not know how many you would be able to send), two lieutenants, one adjutant or quartermaster, or one adjutant and quartermaster (because you want somebody to tell off the quarters, &c.) having no musketry position, and a surgeon. One of the officers of the staff should in my opinion be an officer thoroughly acquainted from his early training with the theory of projectiles. I mean that he should really have studied it from the beginning, because like anything else it requires to be studied from the bottom and learnt young, which would point to his being either an artillery or engineer officer, the instruction of both being exactly the same.

2028. (*Lord E. Cecil.*) How many non-commissioned officer instructors do you think would be sufficient?—That would depend on the number of people you propose to send there at a time. I have not made an estimate of the number of officers and sergeants that would be sent there, because it would depend on the number of regiments in England, and the number of officers and sergeants that it would be considered advisable to send there at a time. I say one or two captains for that reason; two lieutenants I consider absolutely necessary. You could not have them at work always, if you did you could not get good work out of them; that you will observe does away with perhaps one captain, at any rate with the chief instructor and the deputy assistant adjutant-general; but as you will see later, by my proposal I do not save the pay of the deputy assistant adjutant-general.

2029. (*Chairman.*) Have you any suggestions to offer with respect to the district inspectors?—As to the district inspectors, my opinion is that there is a feeling in the army against the espionage of district inspectors. Also I believe that their appointment does not now conduce to what they were established for, that is the musketry being fairly carried out. The commanding officers are inclined to feel that the district inspector takes the responsibility of the musketry off their shoulders. Company officers and musketry instructors while doing their work, knowing that a district inspector is on the look-out to catch them tripping, if I may use the expression, feeling them-

Capt. Drake.

24 March 1870.

School of Musketry, &c.

selves watched, do not feel that the responsibility rests with them as I think they should do and as I believe they would do. I believe that people, especially officers, always do their duty better if they are left to their own honour and not watched. Also it is well known that inspectors differ in severity and strictness. It is a well known thing that what one inspector will give as a fair hit if you ask him the question, another will give against you as a ricochet. I give that as a minor detail to show that you do not get uniformity among them. It is better to trust to officers to do their own work. Also the espionage is not effective; for instance, at Gravesend, I have never seen an inspector on the range.

2030. In reference to your last observation, would you recommend that there should be no inspection?—I would. The inspection should be entirely regimental.

2031. That is to say, it should be the colonel who inspects?—Yes, the colonel should be the inspector of his regiment.

2032. Would not you place the shooting of the regiment under the observation of the general in command, just as much as you would its drill?—Yes, I should. I will come to that by and by, when I refer to the working of the system.

2033. Will you explain in what respect you think the practical instruction at Hythe could be improved and the passage through the school made less distasteful to the officers?—When I was at Hythe the course was too long altogether in my opinion. Every other day was devoted to teaching officers, many of them of some length of service, platoon exercise. Every other day for more than three weeks did I stand up and learn platoon exercise from a sergeant. I had 30 lessons in that particular drill.

2034. (*Mr. Parker.*) In platoon exercise do you include position drill?—No, not at all. Position drill was one day, and every other day one stood on parade under a sergeant and learnt platoon exercise, to ram down imaginary cartridges.

2035. (*Chairman.*) When were you at Hythe?—In 1864.

2036. Have you been there since?—No, I have not gone through a course since.

2037. Do you know whether there has been any alteration in the system?—I cannot say of my own knowledge.

2038. (*Lord E. Cecil.*) Your remarks regarding Hythe apply to the year 1864?—Yes; that is the only experience I have of Hythe.

2039. (*Sir C. Russell.*) But you are a musketry instructor still?—Yes; but I do not know what the system at Hythe is at this moment.

2040. (*Chairman.*) Do you think the theoretical instruction at Hythe is bad?—The theoretical instruction appeared to me faulty. It was thought so by other officers trained at Woolwich and by naval officers trained in gunnery ships. The place altogether was made too much of a school. Officers were not treated in the same way as they are generally when with their regiments; they were made to feel that they were at school. The captain instructors did their best to assist us in every way when I was there as regarded instruction, and socially as well; but the end of it all was that it was very disagreeable. No amusement was permitted; there was no billiard room in the place, and there was no racket court, nothing for the officers to do. We were not allowed to fire at targets for our own amusement, which would have been the only distraction in the place, and we were treated altogether as recruits, whatever our standing. We were made to come to parade five minutes before the "fall in;" and were lectured about being good, and *not putting our feet on the chimney-piece!* just as if we had been children.

2041. (*Maj.-Gen. Wilmot.*) How long was your course?—Just two months, about twice as long as it need have been, inasmuch as every other day we did nothing. In my opinion the object of having officers at Hythe (I am speaking chiefly of officers now) is to teach them to teach, not to teach them to shoot. A man may teach musketry very well without being able to shoot well himself. I think that time might be spared very well for taking all officers studying at Hythe to see the manufactures relating to their speciality at Enfield, Waltham, and Woolwich. There is no necessity, in my opinion, for teaching officers or sergeants who go to Hythe platoon exercise at all while there. Whether it is done now or no, I cannot say. An efficient instructor ought to be turned out in from three weeks to a month.

2042. (*Chairman.*) Do you think the lectures ought to be maintained, or that they ought to be abolished, or that they ought to be modified?—I think it desirable that lectures should be given, though those in the book are unintelligible, at least to me. I have done my best to understand them, and I have failed.

2043. From your previous answer we conclude that you propose to do away with musketry inspectors?—Yes, and the inspector-general, that is *quâ* inspector-general.

2044. To whom would you entrust the performance of the duties now performed by the musketry inspectors?—I am of opinion that all musketry reports should be addressed to the Horse Guards, and sent through the general officers like any other returns. Commanding officers in my opinion do not like to have to furnish reports to and receive "remarks" from an officer who may happen to be junior to them. That is as regards the furnishing of returns. An officer of the adjutant-general's staff might collate and minute all musketry work, and "remarks," &c. would then have the direct authority of the Commander-in-Chief. Then I think all brigade-majors should have been trained at Hythe.

2045. You would make the brigade-major the inspector?—Yes, as far as one is required; but I do not see that an inspector is required. I would make him the inspector as regards the arrangements which come under him now where there is no inspector, but as regards watching people to see that they do not cheat, I would not have him do that at all. I look upon it as a degradation to be watched to see that I do not cheat.

2046. We have had it in evidence that people do cheat?—People do cheat, because they are watched; they look upon it as not being left to their honour, and therefore it is no longer a point of honour with them. In fact, it is thought rather a sharp thing to "do," the inspector.

2047. By whom is the marking done now?—I presume you mean keeping the register. The regulations direct that it should be done by an officer. I make the officers do it.

2048. You do not know how it is done in the line?—No, I do not.

2049. Because it has been stated that the marking has passed out of the hands of the officers into the hands of the sergeants?—That is the register keeping; but no amount of supervision by an inspector would keep the register correct. The man who keeps the register and who wants to cheat is sharp enough to know that if the officer is worth anything at all he will check the register with the target to see the number of each kind of hits, and therefore he must keep his number of bull's eyes correct. But what he does is this, he keeps his total correct, but he gives them to his friends. The sergeant of a party of which I was in command did that.

2050. You are in favour of allowing battalions to compete with each other?—Yes, I think it encourages the officers to look after their men.

2051. (*Maj.-Gen. Lysons.*) Do you consider that it would be advisable to separate the system of musketry instruction into two parts; one to be the normal school, and the other to be the superintendence of musketry through the army, which should be at the Horse Guards?—Certainly.

2052. How would you provide for the superintendence at the Horse Guards?—The only superintendence necessary at the Horse Guards would be somebody

oroughly up to musketry who would be required to llate the returns and minute them.

2053. If you had an assistant adjutant-general for usketry he would be able to perform that duty?—es, I would take the deputy assistant adjutant-neral away from Hythe and make him a Horse uards officer.

2054. And you would have a brigade-major or an fficer in each district under the general officer of the strict, to whom the returns should be sent?—Yes, d who should make the musketry arrangements in e same way as he makes any other arrangements. mean that musketry should be a part of the general ill of the army. Musketry should be just as much der the general as any other part of the soldier's aining.

2055. You think that that would be more satis-ctory to commanding officers in general?—Yes, and e officers would do their work better.

2056. (*Chairman.*) Have you any other modifi-ations to propose in the system of musketry instruc-on or remarks to make on it?—To assist the officers would have a musketry handbook composed giving a small compass the gist of the musketry regu-ations, and officers should be obliged to make them-elves acquainted with it. I have used such a hand-ook for officers of the Royal Engineers with great dvantage.

2057. (*Maj.-Gen. Lysons.*) Do you think that the eturns could be simplified?—Yes, they are very much ore simple than they were, and I think they might e made more simple still.

2058. In what way would you propose to alter the ertificate on the register?—I would take away the ertificate altogether and let the officer in charge of he party write across the register "correct," and ign that.

2059. (*Chairman.*) Have you any further sugges-ions to make?—I think that all field officers should pass through Hythe. A batch of them might go to-gether, so as not to mix them up with subalterns, which was the great objection when I was at Hythe. You might have a major of long standing, and a noisy nsign at the same time working together, and regu-ations had to be made to keep the ensign in order, and the major had to suffer. The commandant would be able to make modifications of the course to suit the rank of the officers. All adjutants and sergeant-majors should be trained at Hythe, and all brigade-majors also should be trained at Hythe. I think more ammunition should be given to the men; 90 rounds a year does not keep up a man's shooting. Any volunteer who wishes to keep up his shooting will tell you that he requires at least 90 rounds a week on an average of the whole summer. I think that match shooting should be encouraged. I think the Government might give a cup annually to each garrison. It seems to me that assistant instructors have very hard work, and they have no pay. I think they should get forage. An instructor gets forage, and forage is quite as necessary for the assistant in-structor. It would be an increase of expense I know, but the expense would be excessively small. The regimental assistant instructor has all the hard work to do, and I think he should have forage, first, because it is necessary, and secondly, because you would make it worth while for a good man to try for the appoint-ment and so get instructors who are used to the work. At Gravesend the line assistant instructor has to go to the ranges every day for the summer, a distance of $2\frac{1}{2}$ miles to do his work, which may in-volve a mile or a mile and a half more walking besides the work. That is too much for a man to go through every day. Of course having to walk instead of riding has a great effect upon the way in which you can do your work when you get to the ground. It is not as if these men had to do it only occasionally, they have to do it every day, except when parties are relieving.

2060. (*Maj.-Gen. Wilmot.*) Is instruction carried on on Saturday?—Yes.

2061. (*Sir D. A. Cameron.*) Do the assistant in-structors always succeed to the instructorship?—Not invariably.

2062. (*Chairman.*) Have you any further sugges-tions to make with reference to the system of mus-ketry instruction now in force?—I have here some notes upon the musketry regulations which I will hand in, instead of taking up the time of the Com-mission by reading them.

The witness handed in the same (*vide Appendix, page* 223).

2063. (*Mr. Parker.*) Do you instruct others besides Royal Engineers?—No, only Royal Engineers.

2064. How many companies actually pass under your instruction in a year?—I do not personally pass more than one or two companies through the course in a year, but I have a large body of recruits to instruct. We have 500 or 600 recruits at Chatham.

2065. Is your time fully occupied with them?—No, my time is not entirely occupied. I have time to do other things.

2066. (*Sir D. A. Cameron.*) Would you have the theory of projectiles taught scientifically at Hythe?—I think it should be taught by somebody who knows it scientifically, such a man would know how much or how little to teach, and would be able to teach the principles of it. Officers who are going to be-come instructors should know something about the matter.

2067. (*Mr. Parker.*) During the course at Hythe do you think there was leisure time to have received instruction in such things as digging rifle pits and forming abattis?—Plenty of time, but I think those things should be taught in a different way. I do not think Hythe a good place for the teaching of such matters, though there would be plenty of time for teaching them at Hythe.

2068. What do you think of the suggestion to make it a school of arms generally, including sword and bayonet exercise?—I think it would be a very good thing, always remembering that those things take time.

2069. But they could be taught in the intervals without much prolonging the course?—Yes; without much prolonging the course beyond what it was in my time. While I was there we might have been taught a great many more things.

2070. (*Sir D. A. Cameron.*) Do you think a person can teach anything which he cannot do well himself?—Yes. I think a man can teach another man to shoot without being able to shoot well himself.

2071. He would teach him better if he were a good shot, would he not?—Not necessarily. His position may be perfect, and he may know all about it, but his eye may be bad.

2072. You object to platoon drill being taught; do you object to the present system of officers, when they join their regiments, going through the platoon and bayonet exercise?—No; I think an officer should be able to do everything thoroughly that his men have to do, but when he has been 12 years in the service he does not want to go to Hythe and learn platoon exercise over again.

2073. (*Sir C. Russell.*) If, as you suggest, an engineer officer were attached to a normal school of instruction, do you think there would be any difficulty in adding to the Hythe course a simple system of field engineering?—None whatever.

2074. Do you think, from your experience, that the musketry instructors, having passed through that system of field engineering, would have time during the year to instruct their battalions in that system?—No, I do not think they would. You must re-member that a musketry instructor's work while it lasts, is very much harder than anybody else's work. I do not say it is continuous. If it were continuous he could not do it, but while it lasts it is very much harder work than anybody else's.

2075. It lasts about 13 weeks, does it not?—At Gravesend it begins in March and goes on to November.

Capt. Drake.
24 March 1870.
School of Musketry, &c.

2076. You do not think the musketry instructor and the assistant musketry instructor between them could carry out that system?—No, I do not think they could, as far as I have seen.

2077. (*Lord E. Cecil.*) In your evidence you have advocated the removal of corporals from the school at Hythe, why not also sergeants, because if officer instructors had time to train corporals in their own regiments, they would surely have time to train sergeants also?—Because you want the sergeants to act as instructors. You are going to train the sergeants to be sergeant-instructors. The corporals have only to shoot.

2078. Could not that be done in a regiment?—No; the sergeant-instructor has to assist in training others, and must be thoroughly acquainted with the system in all its details.

2079. You do not think that a musketry instructor could possibly teach a sergeant the duty he would be required to perform?—No. You would not get him sufficiently up to the mark, I think.

2080. You said that the great advantage of having a school like Hythe was that there would be uniformity in the system?—Yes.

2081. But with regard to regimental instruction you said that you thought it was better to trust to the officer instructors to do their own work, and not to have a district inspector, so that you would have uniformity as far as the standard at Hythe was concerned, but you would not have uniformity in regiments?—If all people were measured by one standard they would all be of the same size.

2082. How would you insure that there would be no deviation in the uniformity of regimental instruction?—Because, supposing one man introduced deviations, the next man who is made instructor of that regiment has been measured by the original standard. I provide a three-feet standard measure, and I measure every yard from that one.

2083. Would you be quite sure that your regimental instructor would keep up to the three-feet standard during the five years he might be in office without any inspection?—He ought to. Part of my scheme is, that every commanding officer should have been through Hythe himself. Every one commanding a regiment would have been through Hythe, because I would send all field officers to Hythe, and therefore when a man comes to command a regiment he, having been to Hythe, knows all the details, and he is, in fact, the inspector in his regiment.

2084. Supposing your system were to be put in force, would you prefer that it should be carried out at Aldershot or at Hythe?—At Hythe. Hythe does very well. There are very good ranges there, and it is a very convenient place.

Recreation rooms.

2085. (*Chairman.*) In regard to the recreation rooms, in which I believe you have taken a special interest, do you think, as now constituted, they answer their purpose?—The only one I have had anything to do with does certainly.

2086. Have you any suggestions to make with respect to recreation rooms?—The question of recreation rooms is connected with the question of canteens. I think the disposal of the profits of the canteen should be left in the hands of the commanding officer, bearing in mind that those profits are the property of the people who have made them. Since the disposal of the profits has been taken out of the hands of the commanding officer and not devoted to the good of the men without permission from various authorities, the officers have taken less interest in the thing than they did before. I think recreation rooms and reading rooms should be attached to canteens. I would allow the men to have their beer or other liquor in the recreation rooms, but certainly not in the reading rooms. I would make those rooms as comfortable as possible in every way. I would give the men every sort of amusement that could be given in them, and provide the whole of the funds out of the canteen profits. At present, according to my experience, the restrictions which are put upon the expenditure of the money derived from the canteens act unfavourably on the men, seeing that it is their money at it were.

2087. (*Lt.-Col. Chesney.*) You would amalgamate the canteen with the recreation room?—It has been done at Gravesend, and I think with advantage.

2088. (*Chairman.*) You are in favour of their being placed in juxta-position?—Yes.

2089. (*Lt.-Col. Fletcher.*) In fact, if you put the reading room, the recreation room, and the canteen together, you would give all that is intended to be given by an institute, would you not?—Yes.

2090. Would you allow a soldier to bring his friends into some of the rooms?—It would depend on the size of them.

2091. Would you permit the admission of both male and female friends?—We have never had any female friends in ours.

2092. You allow them to come into the canteens?—Yes. I have never seen them in either the reading room or the recreation room.

2093. You would not forbid them coming into the canteen if it were amalgamated with the recreation room?—No; I would make the experiment, but make no rule on the subject either way.

2094. Is not it a great object that the room should be properly warmed?—Yes; it ought to be as well lit and warmed as your own club room.

2095. Is not it the fact that owing to the restriction with regard to coals, great difficulty is experienced in getting the rooms properly warmed?—Yes; great expense is incurred in buying coals and paying for the gas.

2096. Is not it very often the case that a sufficient quantity of coals is not allowed?—It is. One has to buy a great deal of coal out of the funds.

2097. In fact, a sufficient quantity of coal is not allowed to warm those rooms?—Not to make them comfortably warm. I would have no subscription from the soldier towards the maintenance of the recreation or reading rooms. I would have all the expenses defrayed from the canteen.

2098. (*Lt.-Col. Chesney.*) Supposing all regiments to be thoroughly provided with proper reading rooms of the description you speak of, do you see in the case of a large garrison a distinct advantage in having what is called a soldiers' institute away from the barracks?—No, certainly not. I would keep it all inside the barrack square as much as I could.

2099. You do not share in the common opinion that men like to go out of the barracks for a little change?—My experience is that they do not care to do so if you give them plenty of amusement inside. There are a certain set of men of course who are attracted by low dancing places outside, but those men would not be likely to go to the institute. My theory generally is to provide as much respectable amusement inside as will counteract the disreputable amusements outside, and to provide good beer inside to counteracts the bad beer outside.

2100. (*Lt.-Col. Fletcher.*) With regard to putting the canteens and the recreation rooms under one roof, do you think that there would be any differenceas regards the places where the troops were quartered? For instance, might not one plan be suitable for Gravesend and London, where there are temptations to the men to go out of barracks, and another plan be suitable at Shorncliffe, where there are not the same temptations?—I think in all cases it would be advisable that they should be in one building, because the whole would be under the supervision of one person having charge of the whole thing; whereas if you separate the canteen from the recreation room and the reading room, you have one man looking after one place and another man looking after another.

2101. (*Maj.-Gen. Wilmot.*) One man could not look after the canteen, the library, and recreation room?—No; but you would have one superior looking after subordinates having charge of the three departments.

2102. You mean a committee of officers?—Yes, who

uld not be nearly so likely to look after it if the e departments were divided. The recreation m at Gravesend is looked after by the canteen geant.

2103. (*Lt.-Col. Chesney.*) In putting the recreation m under the canteen committee and giving the mmittee full power to use the funds of the canteen for it, would you debar them from using the canteen funds for other purposes than those which benefit the recreation room and the canteen?—No; always considering that the expenditure is under the authority of the commanding officer. I would leave the commanding officer the entire responsibility of the canteen and its funds.

Capt. Drake.

24 March 1870.

Recreation rooms.

The witness withdrew.

LIEUTENANT J. M. ELLIOT, 94th Regiment, examined.

Lieut. J. M. Elliot.

24 March 1870.

School of Musketry, &c.

2104. (*Chairman.*) You are musketry instructor of 94th regiment, and you obtained a first-class tra certificate at Hythe last year?—Yes.

2105. When did you leave Hythe?—In the latter d of June last year.

2106. How long were you there?—About six eks altogether.

2107. Do you think that the course might have en shortened?—Not very well.

2108. You do not think that you could have rned what you acquired in a shorter period?—, I do not think so.

2109. Did you consider it a disagreeable ordeal go through?—No, I rather liked it, I always did e anything concerning musketry, but there was ther too much catechising.

2110. Were you treated too much like a school y?—The system was much stricter than I thought as necessary.

2111. Had you to learn the platoon exercise?—es.

2112. Did you consider that necessary?—We are t supposed to require it as instructors of musketry regiments, but I think that it is always necessary at a musketry instructor should know it so as to mind the men where their errors are.

2113. You would not have known it unless you ad been taught it at Hythe?—Yes, every officer on oining his regiment is taught the platoon exercise, ut not to communicate the instruction as is taught t Hythe.

2114. (*Lord E. Cecil.*) You had already learnt the latoon exercise when you first joined your regiment?—When I joined as a recruit I was taught the latoon exercise for the muzzle-loader, but since then he breech-loader has come into use, and of course he exercise is not the same in the one case as in he other.

2115. All officers would now, on first joining, be nstructed in the platoon exercise with the breech-oader?—Yes, they have a general idea of it, but I do not know that they know it word for word as we were taught it at Hythe, or as the adjutant would know it; they know quite sufficient to correct a man in his errors.

2116. Have you any suggestions to make by which you think that the course at Hythe could be improved?—I thought that the course was rather too short. I should have liked to have received more information upon the higher branches of musketry than I did; I certainly received lectures for an hour a day for the time that I was there, but still I should have liked to have had more time at my disposal for studying the text-book.

2117. You think that you had too much to learn by rote?—Yes, still I think most of the subjects indispensable to learn by heart; I think that a musketry instructor should know everything concerning musketry perfectly. Learning the platoon exercise by *rote* might be dispensed with, especially in the case of officers of long service.

2118. An hour a day for six weeks ought at all events to put a man in a fair way of instructing himself upon any subject?—Yes, it ought, but it also depends upon the nature of the subject and the intelligence of the man.

2119. Were the lectures good lectures, did you go to them with pleasure?—Yes, I did. The lectures delivered by the commandant, although interesting, might be dispensed with, and officers allowed to read up the extra subjects at their leisure. It frequently happened that when officers had been at the butts all the morning they could not concentrate their attention to the lecture in the afternoon.

2120. (*Lt.-Col. Fletcher.*) Did you benefit by being obliged to learn very accurately the platoon exercise at Hythe?—No, I did not benefit much by it, because it is not, as I consider, my duty as musketry instructor to teach men that, that devolves on the sergeant-major and the adjutant; still I think that I as musketry instructor should know everything concerning the platoon exercise.

2121. Did you learn the platoon exercise much more accurately at Hythe than you would have done with your regiment, supposing both platoon exercises to be the same?—No, I do not think so, but I could not have communicated it.

The witness withdrew.

BREVET-COLONEL E. NEWDIGATE, examined.

Colonel E. Newdigate.

24 March 1870.

School of Musketry, &c.

2122. (*Lord E. Cecil.*) You are assistant adjutant-general at Aldershot?—Yes.

2123. We are anxious to know whether, if it were thought desirable on other accounts to remove the school of musketry from Hythe to Aldershot, there would be any physical impediments to doing so?—If fixed times were laid down for using the ranges, I do not see any difficulty. If fixed times were laid down for the classes to go through their courses when the ranges were not required for the annual course of musketry instruction so as not to interfere with the regiments quartered at Aldershot, I think that it could be arranged.

2124. With the number of men going through Hythe every year would not it be necessary that they should have the butts at their disposal at all times?—I do not know how many courses there are.

2125. There are four courses in the year?—I think that it could be done.

2126. If it could be done do you think that it would be advisable to remove the school of musketry to Aldershot?—I think that Aldershot would be the best place.

2127. Why?—Because so many soldiers go there for one thing, then it is an easy place of reference, and the inspector of the district might be in charge of the school.

2128. If the school was removed it might perhaps be contemplated to reduce the school from its present condition to that of a training and normal school for the education of instructors rather than for the education of the men; would that make any difference?—No, I think not; I think that would be a great advantage. It should be a training school.

2129. Aldershot being the great central military station in England it would seem natural perhaps that the instruction in musketry should be in that vicinity?—That is my opinion.

2130. Have you a strong opinion upon the point?—I have a strong opinion that Aldershot should comprise the instruction of arms as much as possible, and I think that the more it is concentrated there the

Colonel E. Newdigate.

24 March 1870.

School of Musketry, &c.

greater would be the facilities for the imparting of that instruction.

2131. Has the suggestion been at all mooted amongst the officers?—No, I never heard it mentioned till it was suggested to me.

2132. It would be possible to multiply the ranges infinitely at Aldershot, would not it?—At Woolmer there is plenty of ground for ranges. I do not see why several regiments should not be encamped at Woolmer in the month of May for musketry instruction, and for drill too.

2133. (*Lt.-Col. Fletcher.*) If the shooting were at Ash would not it be necessary, owing to the distance of the ranges from the camp, to build barracks there?—No, I do not think so; it is not so very great a distance, the guards quartered in the north camp march out every day, and prefer to do that to being under canvas at Ash.

2134. Would the adjutant-general's department without an increase in the staff be able to conduct the duty of the district musketry inspectors if they were instructed in those duties?—I do not think they would. I think they would want a little assistance they have harder work than anybody.

2135. (*Sir C. Russell.*) Were you ever through Hythe yourself?—No.

2136. Do you see any difficulty in combining with the instruction given in a normal school of musketry at Aldershot instruction in simple field engineering —I think the same officer might superintend both of those branches.

2137. And Aldershot would be a fitting place for that instruction?—Certainly.

2138. (*Lord E. Cecil.*) Are you in favour of maintaining the system of allowing battalions to compete in shooting?—The firing should be regimental entirely and only marksmen; there should be an allowance for prizes within the regiment, but I do not approve of the system of battalions competing against each other.

2139. For what reasons do you disapprove of that system?—I am aware that there have been instances of irregularities in the marking which are very difficult to detect.

The witness withdrew.

LIEUTENANT-COLONEL C. B. EWART, C.B., Royal Engineers, examined.

Lieut.-Col. Ewart, C.B.

24 March 1870.

Regimental instruction in field engineering.

2140. (*Lord E. Cecil.*) You are in command of the Royal Engineers of the London district?—I am.

2141. I believe that both before the Crimean war you have superintended instruction in field engineering and more especially of late that which has been given to the second battalion of the Scots Fusilier Guards at the Tower; perhaps you will kindly explain to the Commission what you have done in that direction?—In the year 1852 I was employed as instructor in field works at Chatham, under the late Sir Harry Jones, then director of the Royal Engineer establishment, and at that time it was arranged between Sir Harry Jones and the Adjutant-General that detachments of different regiments of Guards and of the Line should send parties of one sergeant and 25 men each to form classes of instruction during the spring and summer of that year; we had about 200 men under instruction at a time, and I think we had four courses. The instruction which was given was the sort of work which those men would have to do in the Field; we did not attempt to make Sappers of them; what we aimed at was giving them an insight into what they would really have to do in the Field. I will state the subjects they were instructed in: they were taught to make gabions and fascines; they were taught to prepare and throw hand grenades; they were taught escalading, the preparation of musketry holes or rifle pits, as they are now called, the demolition of field works, the duties of covering parties, throwing up portions of first and second parallels, throwing up batteries and magazines, widening saps which had been prepared by Sappers, throwing up field entrenchments, the means of surmounting military obstacles; and they were further, upon wet days when it was not convenient to work out of doors, given instruction in the lecture room as to the names of different parts of field and permanent works, the different kinds of field works that would be used in the Field, the defence of houses and of villages, and a general outline of the system pursued in attacking a fortress. That instruction was carried out at the present school of engineering at Chatham, and I believe it was intended to have repeated it the next year, but the Chobham camp was established and that prevented it, as pontooning and field-works were carried on there, and all the troops available were employed there, and the year after that the Crimean war began. The recent instruction at the Tower was proposed by the officer at that time in command of the battalion of Guards quartered there (Lieut.-Colonel Fletcher), and the tools were obtained from the War Office; a non-commissioned officer of the Royal Engineers was employed as instructor; he was not specially sent for this duty, but he is the instructor attached to the Tower Hamlets Volunteer Engineers and he gave up a great deal of time during the day to the Guards when he was not required for the service of the Volunteer Engineers. I should mention that there was some little difficulty in getting ground for the instruction, but part of the ditch of the Tower was used, and an old building on the wharf which was not otherwise required was turned into a shed for sand modelling. The Guards were instructed in making gabions and fascines; they threw up a small portion of a first parallel, so as to show them the work of each of the three reliefs; they threw up a one-gun portion of a battery; they were shown how to trace batteries elevated, sunken, and half-sunken; they were taught how to lash barrel piers together and they formed a raft of barrel piers; then they were practised at launching the piers and forming a raft on the water; they were given such limited instruction as was practicable in what we call sapper bridging, which was a particularly useful thing for them to be instructed in, because it shows them the way a broken arch in the field would be temporarily repaired for the passage of troops; they were taught how to revet with gabions, fascines, and sand bags; they were instructed in forming rifle pits and making sand bag loopholes; they were shown how a redoubt is traced, and they threw up a length of about 18 feet of it; they were also shown many of the other works on a small scale by sand modelling. Generally each day there were six or eight men sand modelling, and 16 or 18 men at work; the party never exceeded about 30 a day. About 90 men in all, including six or eight sergeants, went through this course of instruction. I gave them a general lecture myself upon the duties of troops in the field in connection with field works. Several officers used to attend, especially the commanding officer and the adjutant. I should mention that the officers took a great interest in the instruction.

2142. Did the men as well as the officers take a great interest in this instruction?—All took a great interest in the instruction, both officers, non-commissioned officers and men, and I should mention what I think very praiseworthy on the part of the men, that they received no pay for it, because generally speaking it has been the habit to give the men a small allowance to make up for the wear and tear of boots and clothes, but these men were all volunteers and received no pay for it. The instruction was carried on during about three months.

2143. Have you any acquaintance with the school of musketry at Hythe?—I was quartered at Hythe as an engineer officer for two years. I had charge of the Shorncliffe Camp and that part of the coast.

2144. You know generally the system of musketry now existing in the army regimentally?—I know it generally.

2145. Do you think it would be possible to require of the regimental musketry instructors in the first place to qualify themselves for giving instruction in musketry, and in the next place to superintend the instruction in those subjects to which you have referred, namely, the elements of field fortification?—I think it would be quite practicable.

Regimental instruction in field engineering.

2146. You think that the musketry instructors would have sufficient time?—I think a great deal of it could be done during the winter months when there is no musketry instruction to give, because that is only carried on during the spring and summer, and probably by some little reduction in the musketry course part of this work might be added to it.

2147. When the musketry instructor is employed his time is fully occupied?—During the spring and summer he is pretty constantly employed.

2148. (*Sir D. Cameron.*) Would there be any difficulty in getting tools and implements for the purpose of this instruction?—Yes, a good deal of difficulty has been experienced in getting them for the use of the Guards at the Tower, and there was considerable delay. It is a somewhat new thing, and it appears that there are no general regulations at present under which those tools can be issued. I think it would be very desirable if there were some regulations that would enable them to be given for this purpose.

2149. Did you examine the men theoretically?—Yes, I questioned both the non-commissioned officers and the men on the works.

2150. Do you know on what principle the men were selected for this instruction—were they the most intelligent men?—In the instruction I spoke of first that took place at Chatham in 1852 they were principally selected as being men of good conduct rather than men who were good hands at the work.

2151. Was there much wear and tear of clothing?—At that time at Chatham they were allowed 4*d.* a day as compensation.

2152. I mean at the Tower?—There must have been a certain amount of wear and tear there.

2153. In the case of those whom you examined what sort of examination did they pass?—I found them very intelligent. I was quite surprised at their answering the questions I put to them so well.

2154. Did they take to sand modelling readily?—Yes, they took a great interest in it.

2155. You think there would be no difficulty in carrying out that kind of instruction throughout the army?—Not at all. It would mainly depend on getting tools and on there being ground available for the purpose. You may do a great deal with a small amount of ground.

2156. (*Maj.-Gen. Wilmot.*) You do not think the wear and tear of clothes is so great as to hinder such an arrangement being made?—No, the men appear to have worked entirely voluntarily.

2157. You do not think such an amount of expense is thrown upon the men as to make it distasteful to them?—No, but I think it would be desirable if they were given some small compensation as part of the system; if the instruction was made compulsory a very small compensation would be sufficient; 4*d.* a day was given to the detachments I speak of at Chatham.

2158. How many hours a day were they under instruction at the Tower, or how many hours a week?—The Guards were under instruction about three hours a day, each course occupying from three weeks to a month.

2159. (*Lt.-Col. Fletcher.*) Do you not consider that consequent on the advance of military science it will be more than ever necessary to instruct the officers and men of the infantry in field engineering, owing to the increased work which in war will now be thrown on the Royal Engineers?—I have always thought it very desirable, and it is now particularly so.

2160. Also would it not be the case in the event of a war that the officers of the Royal Engineers would have to turn their attention to the more scientific portions of their work?—Yes, quite so. In fact, in the Crimean war we never found that we had engineer officers enough to do what they had to do, and now the want would be felt a great deal more, because many additional duties would fall upon them.

2161. Therefore the work of making gabions, fascines, and similar works ought to be left to the infantry?—Yes; we never could attempt to do these ourselves. All that we could do would be to superintend them.

2162. You probably consider that even the superintendence of such works ought to be left to the infantry officers?—Yes. I might instance what we did before we went to the Crimea. At Varna the gabions and fascines were prepared in large quantities by the divisions and then were sent in to the engineers' depôt at Varna; but any superintendence which at that time was required was given by the engineers attached to the divisions.

2163. Of course it would relieve the Royal Engineers very much if the preparation of those works were left to the infantry?—The Royal Engineers would be able to attend to other duties if Regiments could do those things themselves.

Recreation rooms.

2164. (*Lt.-Col. Chesney.*) As to recreation rooms, you have not long since built recreation rooms at Windsor on rather a new principle, have you not?—I have.

2165. Will you state to the Commission upon what principle those recreation rooms have been established?—The principle adopted in the re-construction of the Guards barracks at Windsor, which has been going on under me during the last four years, has been that we should have under one roof, first, a canteen with a tap; second, a grocery store and a bar for the sale of miscellaneous articles to the married people or to the pay sergeants of companies; and, thirdly, a good reading room, with a book room attached and a recreation room. The recreation room was provided with a bar, with the intention that tea or coffee or provisions should be served from that bar. What we had in view in this was that there should be under one roof a central administration; that is to say, that the non-commissioned officer should be in charge with his assistants, and that one kitchen should serve for the whole. We considered that by this arrangement we saved fuel, and we saved non-commissioned officers and men; but we took care that there should be separate entrances; in fact, no one can go from the tap of the canteen into the recreation room and the reading room without going into the open and walking round to another door, and in the same way the grocery store was separated from the canteen.

2166. Can you tell us whether any objection has been raised to that arrangement?—I have not heard any objections. I am very strongly in favour of the system myself. I have tried both systems. I reconstructed the old canteen at Hounslow on the same principle by adding to it; and at the cavalry barracks at Windsor, which were also reconstructed under me, I was anxious to have done the same thing; but at that time it was not approved of, and the recreation and reading rooms were placed in a separate building by themselves. I very much prefer the whole under one roof, but with separate entrances.

2167. (*Lord E. Cecil.*) Have you any suggestions to make with regard to the improvement of recreation rooms? Do you think that the fuel which is at present allowed by Government is sufficient?—The fuel does not come under my department, but I have not heard of any serious complaints about it.

2168. (*Lt.-Col. Chesney.*) It has been suggested to the Commission that the present canteen committee should have charge of the recreation room of the regiment also, and be allowed to devote the profits of the canteen towards improving the recreation room. Do you see any objection to that?—I think that that would be desirable, because I know from having been

Lieut.-Col. Ewart, C.B.

24 March 1870.

Recreation rooms.

employed on the staff at Head quarters at the Horse Guards, and having had, when there, an opportunity of seeing a great number of reports upon canteens and examining the canteen accounts, that there were very large profits, and the difficulty was to arrange how these profits should be spent, and eventually it was decided that the provisions were to be cheapened very much; but as a general rule commanding officers were not in favour of cheapening the beer too much; they did not think that the beer should be sold much below what it was sold for outside. If you merely keep the beer at the price at which it is outside, you make a large profit.

2169. (*Lord E. Cecil.*) The soldier would naturally prefer to drink pure beer instead of adulterated beer if he had the chance?—Yes.

2170. Always, provided you kept the price the same?—Yes, you should not have it higher certainly than outside; but the soldier would rather go to the canteen, because he can go there without dressing himself.

2171. Have you formed any opinion with regard to the question whether such an institute as has been spoken of should be built inside the barracks, or whether the men should be allowed to go to an institute outside the barracks?—I consider it very desirable that anything of that kind should be Regimentally conducted, and should be within the walls of the barracks.

2172. I suppose in some places there is a difficulty in providing sufficient accommodation for lecturing purposes. Would you be in favour of having a large lecture room built in garrisons?—I think that in a large garrison an establishment for lectures, or which could be used as a theatre, would be desirable.

2173. You would, in short, make the same building available for several purposes; you would make it capable of being turned into a lecture room or a theatre or a place of recreation, even for dancing if a ball were given by the non-commissioned officers of the garrison or regiment?—Yes, it might, I think, be used for all those purposes.

2174. (*Mr. Parker.*) Do you think that such instruction in simple field works as you have described should form part of the regimental training of officers and men?—I think it would be very desirable to the extent of a short course.

2175. Do you think that such a course could be given by a regimental instructor?—I think it might, provided that he had instruction in those things, and I think if he was to instruct in those duties he ought to go through a short course of instruction at the school of Engineering at Chatham.

2176. It has been suggested that some such instruction might be combined with the musketry instruction at a central school of arms, would you think it preferable to have a separate central school in which should be given instruction in engineering?—I should prefer that the officer should qualify for his musketry at Hythe, and qualify for his Engineering at Chatham.

2177. Do you think it would be possible for the same officer to give instruction both in musketry and in Engineering, having separately qualified for musketry at Hythe, and for Engineering at Chatham?—Yes, I think so.

The witness withdrew.

CAPTAIN AND ADJUTANT THE HONOURABLE P. S. METHUEN, Scots Fusilier Guards, examined.

Capt. P. S. Methuen.

24 March 1870.

Regimental instruction in field engineering.

2178. (*Lord E. Cecil.*) I believe you are adjutant of the 2nd Battalion of Scots Fusilier Guards?—Yes.

2179. Last year and this year has there not been some field engineering instruction given to your battalion at the Tower?—Yes.

2180. Will you give the Commissioners some idea of the effect of that instruction upon the men. Has it been beneficial or otherwise?—It was very beneficial as regards the health of the men. The average of sickness during the three months before the instruction was carried on was as follows, September 31·50, October, 27·46, November, 26·46, whereas in the three months after the instruction was given the average sickness was as follows, December 24·77, January 19·67, February 18·25.

2181. Did you observe that in their general conduct there was a marked improvement in consequence of this instruction?—It gave them plenty to do and less time to get into trouble.

2182. Would you be in favour of extending it largely throughout the army?—Yes.

2183. I suppose you would apprehend some difficulties in some quarters, or do you think that every barrack and every station would afford the appliances for such instruction?—I think that in every case where a bit of land is attached to the barracks the officers and men on joining the regiment should go through a course of field engineering. If they once went through that course I do not think that they would require to go through the course again for some time.

2184. Would you offer any extra inducements, prizes, or any working pay?—No, none; it ought to be considered as a part of their drill. I think the men employed should be allowed compensation for the wear and tear of their boots. I think also an extra serjeant should be appointed to superintend the party, and act as instructor.

2185. (*Lt.-Col. Fletcher.*) Did you find that the men took much interest in their course of instruction?—Yes, they did.

2186. Did they pass any examination in the theoretical part of it?—Yes, all of them did before they were dismissed.

2187. Did most of them answer their questions well?—Yes, certainly, most of them did. Then they were the best men we could get out of the battalion.

2188. You took a great deal of interest yourself in it?—Yes.

2189. Do you think that it was owing a great deal to the interest which some of the officers and the higher non-commissioned officers took in it, that the men worked so well?—I think the success greatly due to the interest shown for it by some of the officers.

2190. (*Maj.-Gen. Wilmot.*) Do you think, taking one of the sergeants whom you have so instructed, he would be competent now to instruct others in those things which he learned himself?—Yes, I think so, without going to Chatham. He would be all the more competent if he had gone to Chatham, but still he is fairly competent without having gone there.

2191. Supposing the instruction to be given generally throughout the army, would you like to see every regiment go through a certain course of it every year as a part of its annual drill and training, or would you confine it simply to men on first entering the army, to have them taught, and then left alone afterwards?—I should think that the men could be thoroughly instructed on first joining, and that it should be optional for a man to go through a second course.

2192. In addition to the works outside you have a sand modelling room?—Yes.

2193. Do you think that any of the sergeants who have gone through a course of instruction with you could instruct the men of their regiment in what they learnt there?—Yes, Certainly.

2194. The work in the modelling room involves no wear and tear of clothes?—No.

2195. You do not think that the work outside involves sufficient wear and tear of clothes to prevent the men from engaging in it?—No; they can use their swabbing clothes. I think they might complain of wearing out their boots as well as their shirts.

2196. (*Lt.-Col. Fletcher.*) Was not it the fact that ne men asked to be allowed to extend their work in ne modelling shops in the afternoon?—Yes, they like very much.

2197. (*Sir D. A. Cameron.*) How many non-commissioned officers and men are employed at one time this instruction?—Between 20 and 30 men; two asses, about 15 in each.

2198. Do you attribute the decrease in the sickness the employment in that work of so small a number men?—To a great extent, as also to the great umber of men employed on working fatigues.

2199. You think that the decrease of sickness is to e accounted for by their employment?—Yes; we ever got so low an average before.

2200. (*Maj.-Gen. Lysons.*) For what length of time as each class under instruction?—The course would e 21 days, but sometimes it would be more and sometimes less.

2201. It would be 21 days provided there was no in?—Yes; and some classes might want more time han others would. 21 days was the average.

2202. (*Lord E. Cecil.*) Have you heard of any omplaint in your battalion as to the insufficiency of uel and lighting in the recreation room?—Yes.

2203. Could you suggest any improvement in that aspect?—I think that we should get the allowance hat we used to have, but it was cut down I think.

2204. When was it cut down?—I think that it was either at the end of September or the beginning of October.

Capt. P. S. Methuen.

24 March 1870.

Regimental instruction in field engineering.

2205. (*Sir C. Russell.*) We have been told that your apparatus was valued at about 140*l.*, are you of opinion that a less expensive apparatus would answer nearly the purpose, or do you think that you only had what was actually necessary in the way of appliances?—I think we had only what was necessary, but it ought not to have cost 140*l.* ar anything like that sum.

2206. Have you ever made anything approaching to an estimate as to the cost at which you could supply the necessary materials to your battalion?—No, but I could do it very easily, and I will send it to the Commission.

2207. (*Maj-Gen. Wilmot.*) Was the apparatus which you used so entirely destroyed that it was of no value afterwards?—No, certainly not; there was no extraordinary wear and tear.

2208. If you had an opportunity, at the same station where you are now, the same apparatus would serve your instruction perhaps this year and next year too?—Yes.

2209. The first outlay is comparatively all that is required?—Yes.

2210. (*Lt.-Col. Fletcher.*) The apparatus comprised a barrel pier bridge and also some of Alderson's platforms, did not it?—Yes.

The witness withdrew.

Mr. Thomas Carson, Regimental Schoolmaster, examined.

Regimental Schoolmaster Carson.

24 March 1870.

2211. (*Lord E. Cecil.*) You are schoolmaster of he Royal Engineers at Aldershot?—Yes.

2212. How long have you been in the service?—16 years.

2213. Have you ever served abroad?—Yes, at Gibraltar and the Cape of Good Hope.

2214. How many years have you been stationed at ome since you returned from foreign service?—Seven years.

2215. Have you been the whole of that time at Aldershot?—I was 17 months at Dover and eight months at Aldershot with the 59th regiment, about three years and three months at Parkhurst with the 5th Depôt Battalion, and the remainder of the time at Aldershot with the Royal Engineers.

2216. The Commission are very anxious to have a little additional information on the subject of recreation rooms, and perhaps you may have some suggestions, from your own personal experience, to make upon that subject?—I managed recreation rooms for the three years following their first institution in the 59th regiment and the 5th Depôt Battalion, and from my experience of them their success is unequivocal, and they have unquestionably conferred greater benefit upon the private soldier than any other moral agency which has been brought to bear upon him. Men of all tastes find occupation in them, and there is generally quiet and good order prevailing. I have heard for some years past that it was probable that there would be an amalgamation of those institutions with canteens; that would be a step that I would deplore. Its effect would be to lower the tone of recreation rooms to that of the canteen, rather than to raise the tone of the canteen to that of the recreation rooms. The canteen and its neighbourhood contrast unfavourably with the recreation rooms, and any step to amalgamate these institutions by placing them both under one roof would be a retrograde movement. I think from my experience of the management of recreation rooms that great advantage would result from their being amalgamated with canteens as far as management goes. It was a very liberal idea of the war minister at the time to concede the management of the recreation rooms altogether to the soldier, for which change the soldier was scarcely fit, and practically now, though nominally the committee is elected by the private soldiers, it falls into the hands of one of two men, perhaps the president, perhaps the librarian. I think that where the canteen is in regimental management, excepting the supply of furniture, fuel, and light, which should be continued as at present, the support of the recreation rooms should fall upon canteen funds. The subscription to recreation rooms could then be abolished, their doors would thus be as freely and widely open as those of the canteen, and men could resort to them without let or hindrance of any kind. In that way I think the canteen funds would be spread most beneficially over a greater number of men, and every man would have a better chance of participating in the benefit of the funds than perhaps he has at present. The elective committee of the recreation room is a failure, few subscribers care to serve on it, and I know from my own experience the difficulty there is in getting together the members of the committee in order to close accounts or to transact other necessary business. In the matter of refreshments, if we sell refreshments we do so in competition with the canteen, for many things which we sell in the recreation rooms they sell also in the canteen; but if the recreation rooms were under the management of the canteen committee those refreshments might be sold at a much less rate than at present, as then the recreation rooms would have the advantage of the wholesale purchases made for the canteen, instead of, as now, buying from the canteen itself, at retail prices, most of the articles sold in them. Regiments in which an interest is taken in recreation rooms, are sure to be in possession of pictures and other property, which are carried about with them; it may, therefore, be desirable to recognize recreation rooms to the same extent as schools in Schedule of Baggage on page 122 of the Transport Regulations. As regards libraries, the sum now paid into them, which is a compulsory allowance of 5*s.* a quarter out of the recreation room fund (that is, per company), is altogether too small a sum at small stations. At Parkhurst, for instance, there were 16 companies, there being eight depôts, and we could barely pay our way, that is to say, out of the sum that we had to provide for keeping the books in proper repair, and in providing a very few new books, and for meeting various contingencies connected with the library, we were just barely kept from going back. I find this passage in the 16th section of the fifth Report of the Council of Military Education on Army Schools:—"In 59 instances "the number of volumes has been reduced, and in

Recreation rooms.

Regimental Schoolmaster Carson.

24 March 1870.

Recreation rooms.

"some of these the decrease bears so large a pro-
"portion to the whole as to threaten early extinc-
"tion," which bears me out to a remarkable ex-
tent. "All the above libraries, 59 in number, are,
"except those of the Royal Artillery at Woolwich,
"very small libraries, where the subscriptions are
"insufficient to cover the expense of repairs and
"renewals." Now abroad the same sum only is allowed, and I know, from experience at the Cape of Good Hope, it would be impossible there to purchase even at the enhanced rate of 25 per cent. the same books as at home. At Gibraltar, before recreation rooms were at all recognized, I managed the reading room of the 31st Regiment, and we had the same difficulty to contend with there, we had to purchase papers and books at an increased price. The allowance at present is not sufficient, and as showing the difficulty that we have felt in the matter of the library I happen to have by me an old recreation room form of report of the 5th Depôt Battalion at Parkhurst, and in it I find that there was paid to the library the sum of 7*s.* 6*d.* per company instead of the authorized 5*s.* We were the the only corps or battalion using it, and we found it to our own interest to make the extra contribution.

2217. (*Lt. Col. Chesney.*) Do I rightly understand you that you would give up the recreation room grant to the library entirely?—The principle I would act on is this, I would take from those who have and give to those who have not. I would do away with the recreation room grant in its present form. A grant of 7*s.* 6*d.* per quarter for each company serving at home, and 10*s.* per quarter for each company serving abroad, should be given for the maintenance of the garrison libraries. As a matter of simplicity of account this allowance should be placed by the Control Department to the credit of the Garrison Library Committee, on the fifteenth day of the second month of each quarter, on the certificate of the officer commanding the garrison of the number of companies present in it at that date, instead of passing through recreation room accounts and having to be collected from each regiment serving in a garrison as at present. Regiments having canteens of their own should not have any grant in aid of their recreation rooms; those regiments so exceptionally situated as not to have canteens of their own should receive a special allowance in aid of their recreation rooms of 7*s.* 6*d.* per quarter for each company if serving at home, and 10*s.* per quarter for each company if serving abroad. The corps I belong to now suffers very materially from having no regimental canteen, and is placed at a great disadvantage by the organization of a branch of it. The Royal Engineer train consists of two troops, each troop is composed of two sections, each section numbers 100 men, and there is besides a depôt numbering over 40 men. Its total strength is equal to that of a cavalry regiment, compared with which it receives only one-fourth the allowance in aid of recreation rooms. This, I believe, explains the non-progressive state of the recreation rooms, though seven in every ten men subscribe to them, paying the maximum rate. Each section, as regards the recreation room allowance, should be considered a company, the depôt should also be considered one.

2218. (*Lord E. Cecil.*) I understand you to say that you would not have the canteen and the recreation room under the same roof?—No.

2219. With respect to the comparative advantages of recreation rooms outside the barrack walls and recreation rooms inside the barrack walls, which do you think the men would most approve of, which do you think would be most beneficial for them provided they could get equally good or better refreshments inside the barracks and at the same price as outside?—From my own experience they would patronize both.

2220. Can you suggest anything by which the recreation rooms inside the barracks might be made so inviting as to induce the men to patronize them altogether?—No. I believe no matter how tempting or how inviting the recreation rooms inside the barracks may be made, the men will go out of the barracks; we had at Parkhurst everything to induce them to come to the recreation rooms inside the barracks. We even had billiard tables.

2221. Can you assign any reason for the desire shown by some of the men to go outside the barracks for recreation instead of remaining inside?—No, except that the men desire to go out of barracks to get away from restrictions for the time being. The men are fully aware of everything provided for them inside and many of them are grateful and have a very proper feeling with regard to it, still they will go outside no matter what is provided for them inside.

2222. (*Lt.-Col. Chesney.*) At Parkhurst they have a similar institute in the town, have they not?—An institution existed in Parkhurst for about four years called the soldiers' institute, which was got up by subscription. At the time the recreation rooms in barracks were opened, it was thought that the subscriptions to it would decrease, but that was not the result. The men subscribed to both places, frequenting each as it suited them. We charged 1*d.*; they charged 3*d.*; so far from their subscriptions decreasing they rather increased, and the institution was very prosperous till 1866, when a change of depôts took place. When the new depôts came to the station a little struggle took place, and the number decreased, and I think the commanding officer for that reason closed the institute, but it was not in debt at the time; there was a sum standing to its credit.

2223. (*Lord E. Cecil.*) Have you ever heard any complaints made with regard to the insufficiency of the fuel and lighting of the recreation room?—No, my experience was that the recreation room was well lighted, and with economy there was plenty of fuel, and many men subscribed for no other purpose than to have the advantage of sitting by a good fire in the winter. The provisions of War Office Circular 846 of the 9th December 1863, are liberal. It may not be generally known, that by it where the rooms are kept open after tattoo, one-sixth more fuel may be issued on the requisition of the officer commanding.

2224. You would not advocate any increase of the Government allowance in that respect?—Some rooms are much more easily warmed than others. The model recreation rooms are much larger than the rooms we had at Parkhurst, and having the same number of fire-places, and consequently receiving the same allowance of fuel, I can quite understand they would be very much colder, and in that case an increased allowance of fuel would be necessary.

2225. Do not soldiers generally prefer warm and well lighted rooms to cold and badly lighted rooms?—That is the greatest inducement to men to resort to them, and is, in fact, the most essential condition of the success of recreation rooms, because the recreation rooms well warmed and well lighted contrast with the barrack room.

2226. Do I rightly understand you to say that you would prefer that the whole of these buildings, the canteen and the recreation rooms, should be under one management, under one committee, and one sergeant?—They could be under one committee of officers, but they could not be under one sergeant. I would have a sub-committee for the recreation rooms nominated by the commanding officer, and a sub-committee as at present for the canteen; the librarian would have the actual charge of the recreation rooms, and the canteen serjeant that of the canteen, as at present.

2227. (*Sir D. A. Cameron.*) Would you allow beer in the recreation room?—No.

2228. (*Lord E. Cecil.*) Would you have any special rooms where the soldiers could see their friends; male as well as female?—I have been repeatedly in our recreation room, and I have seen men bringing their friends into the reading room. They are permitted to receive them there.

2229. Female as well as male?—Yes; those are persons whom I believe from their style to have

ome from a distance. They are received there by the oldiers, and they partake of refreshments there.

2230. Do the men look upon that as a great boon? —I think so.

2231. Have you any other suggestions to offer o the Commission?—There is one subject to which would wish to refer. By General Order No. 28 f April 1868, schoolmasters are not allowed to fill ither the office of treasurer or president of the egimental recreation rooms. My objection to that rder is this. I do not know of any way in which, esides actual school work, a schoolmaster might act nore profitably, as far as influencing the education of he men goes, than by mixing himself up in the nanagement of the recreation room; for instance, in he revision of the list of books to be purchased for he garrison library.

2232. (*Lt.-Col. Chesney.*) Before that order was ssued was it a frequent thing for schoolmasters to take harge of the recreation room?—Not very frequent. know of several instances where schoolmasters were ngaged in the management of recreation rooms.

2233. Do you know the origin of that order, or whether there was any special reason for it?—The reason schoolmasters believe to be this. About a year before the order was issued a young man who came from the Royal Military Asylum at Chelsea, and who was a man of rather blemished character before his appointment, became schoolmaster of a certain regiment, the recreation room funds of which he misappropriated. We believe in consequence of that this order was issued; but the origin of the prohibition was so well understood in the garrisons of the Curragh and Dublin that it almost amounted to a public stigma on schoolmasters. There is a further point in connexion with this to which I would wish to refer. The commanding officer often has a difficulty in providing men to take charge of the recreation room. It may happen that the senior non-commissioned officers are sufficiently engaged in other matters, and he might wish, if it were not for this prohibition, that the schoolmaster should share the burden of the management of these recreation rooms; but he is prohibited from doing so.

2234. Is the prohibition looked upon as a grievance by schoolmasters?—Yes, they regard it as a stigma.

2235. In a large garrison like Aldershot, for instance, if the recreation rooms inside the barracks were made thoroughly comfortable, do you think it would be regarded as a boon to the men to have another set of rooms of the same sort in the town for the same harmless amusements?—Yes.

Regimental Schoolmaster Carson.

24 March 1870.

Recreation rooms.

2236. The men you think would still go to the town?—Yes, I think so. I have known men to leave the barracks in Parkhurst, to go out for a walk in the country, to come back and wash and refresh themselves in the little institute in the town and go out again and return, remaining all the time perfectly sober, notwithstanding that they had the same advantages in barracks. The advantage of that institute was that it kept many of them out of the low public-houses.

2237. (*Maj.-Gen. Wilmot.*) Supposing the recreation room and the canteen to be separate buildings, but under the same management, could it not be so arranged that all ordinary refreshments could be sold at the same price at both places?—That should be so.

2238. In which case no rivalry need exist between the two?—No, every article sold in the recreation rooms should be sold for and on account of the canteen.

2239. Supposing all canteens had a room large enough for the accommodation of men who wished to drink beer, would not it then be unnecessary to take beer into the recreation room?—I think so.

2240. (*Lt.-Col. Fletcher.*) Are the recreation rooms kept open after roll call?—Yes.

2241. Do you find the men use them much then?—At Parkhurst very many used them then. This return will show that we had billiard tables there which were a great attraction to the men (we realized by the use of those billiard tables in one quarter 13*l.* 8*s.* 5*d.*), and those men who had been out and had not read the papers during the day would come then and read them, but nothing occurred that made the opening of the rooms inimical to the discipline of the battalion.

2242. Are the libraries open after roll-call?—No, the libraries are only open a certain number of hours a day for the men to change their books.

2243. (*Mr. Parker.*) To what hour are the recreation rooms open?—Half-past 10.

Adjourned.

Thursday, 7th April 1870.

PRESENT:

THE RIGHT HONOURABLE LORD DUFFERIN AND CLANDEBOYE, K.P., K.C.B., IN THE CHAIR.

LORD EUSTACE CECIL, M.P.
GENERAL LORD DE ROS.
LIEUT.-COLONEL SIR CHARLES RUSSELL, BART., V.C.
LIEUT.-GENERAL SIR D. A. CAMERON, K.C.B.
MAJOR-GENERAL EARDLEY WILMOT.
MAJOR-GENERAL LYSONS, C.B.
REV. DR. BUTLER.
C. S. PARKER, ESQ., M.P.
LIEUT.-COLONEL FLETCHER.
LIEUT.-COLONEL CHESNEY.

HIS ROYAL HIGHNESS THE DUKE OF CAMBRIDGE, K.G., &c. &c., examined.

H.R.H. the Duke of Cambridge, K.G.

7 April 1870.

Army schools.

2244. (*Chairman.*) I will first ask your Royal Highness whether it would be possible, advantageously, to establish by general regulation a system of compulsory attendance at school for soldiers who cannot read and write; would you make the attendance at school compulsory?—No, I certainly would not. I think that all compulsory education is an impossibility. I think that you ought to give such advantages to those men who have acquired knowledge that it would come to the men's own minds that they had better attend school; but the compelling a man to read and write is, I think, an impossibility.

2245. (*Lord de Ros.*) As a recruit?—Yes.

2246. *Pari passu* with the drill?—Yes. You cannot compel any man to attend school; it is like taking a horse to drink water when he will not drink.

2247. (*Chairman.*) Your Royal Highness would not require the men to enter school at all?—I would encourage their doing so by every means in my power.

2248. But you would not think it necessary for a recruit to enter school, so as to see whether he could learn or not?—There is no objection to its being to that extent compulsory, that they should all go to school, but very soon after going to school it would be developed whether a man was able to learn or not, and the moment that you were satisfied that a man had no capacity or will to progress with his education, I should not go on compelling him to attend school.

2249. But still you would see no objection to the attendance being rendered in some degree compulsory, and that an opportunity should be given to the school-

Army schools.

master to ascertain whether or not a man possessed the requisite capacity?—Most assuredly. I think that it would be a very great advantage to do so; but the question is what you call a recruit. I think that a recruit at first has not time to attend school at all. I think that so much time must be devoted to forming him into something like a soldier that he would not be able to attend school, say for the first three or four months; after that time I think that he should attend school.

2250. Of course there must always be a certain proportion of men joining the regiments whose education might be considered as hopeless?—Exactly so.

2251. And those men would be eliminated as soon as their incapacity appeared?—Yes. I would let it be clearly understood that whilst every man had an opportunity of testing his capacity for instruction, as soon as it was found that it was of no avail to continue it, it should not be carried on as a mere parade, but that he should then be understood to fall into the ordinary routine of duty without requiring him to go on with it.

2252. (*Lord de Ros.*) Would you leave that to the discretion of the schoolmaster?—I would leave it to the discretion of the commanding officer. I am quite satisfied that the more you require commanding officers themselves to attend to these subjects, the more easily you will get the system to work satisfactorily.

2253. (*Chairman.*) I daresay that your Royal Highness would not recommend that men already in the army should be restrained, even to that extent?—I would not compel any man to attend school, because I think that there are men whom you might send to school every day, but who would never get beyond what they knew on the day that they commenced; but I think that that fact is very soon ascertained, and then I think that you ought to hold out inducements (which is the case now), and that a man would soon find it to be greatly to his advantage to possess information, and as a matter of course he would be desirous to acquire it; and I should give him every facility of acquiring it in any way that you could allow him to do so, without, of course, its interfering with his duties, which must be the first consideration.

2254. Would your Royal Highness be inclined to leave it to the discretion of the officers in command of the regiments to determine whether the attendance at school should take place during the period of drill, or subsequently?—I would leave it to the commanding officers as much as possible.

2255. Do you think that it would be advisable that the Horse Guards should lay down as a permanent regulation that so many hours during the week, or during the month, should be absolutely devoted to instruction in school, leaving it to the commanding officers to regulate the periods during each day, or during the week, in which that regulation should be complied with; for instance, that the Horse Guards should say that so many hours per week, five or six, as the case may be, must be devoted to instruction; but that the commanding officer is to determine whether there is to be an hour and a half one day, or an hour one day and half an hour the next, and so on?—You must leave great discretion to the commanding officer, because the circumstances in different garrisons are so very different. For instance, one garrison has a very large amount of duty, and of course the men would have to perform it, and if so, they would not have time to go to school. Of course, under such circumstances it would be an absurdity to lay down a regulation which could not be carried out; and it is always very objectionable to lay down anything which would not be complied with. Therefore, I think, that whilst you say that a certain number of hours, whenever practicable, should be devoted to school, it should be very much left to the discretion of the commanding officer; because, otherwise, I do not see how you could make school attendance come in with the other avocations of a soldier, which at times are light, and at times are very heavy.

2256. (*Lord de Ros.*) Your Royal Highness would take into consideration the difference of the seasons of summer and winter?—Yes. In winter time I think that the school would be very much more attended than in summer. I think that in summer there should be very little school, because there is then a great deal of out-door work; a man is then engaged during the day, and he comes home fatigued, and so on, and is incapacitated from attending school.

2257. (*Chairman.*) But you would not object to a general regulation emanating from the Horse Guards, to the effect that so many hours over a certain period, per day, without actually distributing the time, should be absolutely devoted to instruction, subject, of course, to such modifications as might appear desirable?—I think that you might to a certain extent do that by laying down such a regulation as would show that the object of the authorities was that such should be done; but I think that you must leave a great deal to the discretion of the commanding officer, because it depends so much upon the circumstances of the station where the corps happens to be in quarters.

2258. Would you consider it desirable in time of peace, which is the only period which we can pretend to consider, that promotion from the ranks to the position of sergeant, &c., should be dependent upon the possession of an educational certificate?—I think that whenever practicable it is very desirable that it should be so, but I would not make any regulation absolute, because I think that there are circumstances which require the commanding officer to promote a non-commissioned officer or a private who perhaps has not the information which would qualify him for a certificate. I think that it would be very hard, and very disadvantageous to the service, if you made such a certificate absolutely necessary; but of course it is very desirable, and the commanding officer himself would feel the necessity and advantage, for his own sake, of its being so. Therefore, I think, that as a rule it would be well to have such a requirement, but I should not make the rule so stringent that the commanding officer would be debarred from promoting a man unless he had a certificate.

2259. Supposing that we were to say that the rule should be that a man should possess a certificate, but that on the recommendation of the commanding officer, and subject to the approbation of the Commander-in-Chief, or of the General of the District, such relaxation as your Royal Highness mentions should be permissible, would that be sufficient?—The commanding officer promotes his own non-commissioned officers without reference to anybody; and therefore I do not think that you should interfere with him in that respect at all; you should not make it compulsory that if he deviated from the rule he should report it to a higher authority, because I think that that would very much stand in his way in promoting a man whom he thought really qualified. I think that it is desirable, and essential, that you should let it be understood that as a rule a man should be promoted with a certificate; but that of course under circumstances where a commanding officer wished to promote a man without a certificate, he should do so, if he thought fit. Of course the higher authority would call upon him for explanation if that authority thought it expedient to do so; but I should still leave it to the commanding officer.

2260. Would you object to the commanding officer reporting the fact, even though it did not require confirmation?—I should object to it, because nobody can be so good a judge of the matter as the commanding officer; nobody can know the details of a man's character so well as the commanding officer.

2261. Might it not rather impress the commanding officers with that which your Royal Highness seems to consider is desirable, namely, that these persons should possess these certificates, if while the discretion was left to them to make exceptions to the rule, they were recommended to bring those exceptional cases under the notice of the officers in command over

hem?—In my opinion it would be a great pity to nterfere with the unfettered discretion of the com- anding officers. I remember many years ago, when was in the 12th Lancers, a corporal or two, who vere the best corporals in the regiment, but who ould not read or write—consequently they were never romoted beyond the rank of corporal, but as corpo- als they were most efficient men—they were encou- aged to learn to read and write, but they would not o so, and consequently they were not promoted, ecause it is impossible to make a man a sergeant vho cannot read or write, but still he may be a very fficient corporal, and a very good man to keep other nen in order.

2262. Your Royal Highness probably would not hink it desirable that the schoolmaster should have he rank of warrant officer?—Most undoubtedly not. We had that at one time, and it led to the greatest pos- ible confusion. I was at Dublin, in command, when he system was introduced, and the result was that in hose days these men considered themselves more ike gentlemen than anything else. They used to write to the Chaplain-general, who was then at the ead of the department, and to report their command- ing officers. We had endless trouble and confusion arising out of it, and they were positively encouraged to do so, and the result was that it produced such a bad feeling against the whole system, that it was very nearly breaking down. Since we have relaxed that state of things, the system has worked admirably; and the relaxing that original system has been an encouragement to the good schoolmasters, and the whole system has been found to work beneficially for the army, instead of the reverse.

2263. Do you think that the soldier assistants make good schoolmasters?—If you ask my opinion, I decidedly prefer a man being a schoolmaster who has first been a soldier, because he understands dis- cipline. When these young men first came they did not understand discipline, or what the meaning of discipline was; they did not understand the position of the commanding officer as regards themselves, they did not understand that he was superior to them and that the officers were superior to them, and they consequently thought that in their own sphere they were supreme, and such being the case, there was, of course, no controlling them in any way. It is desirable that there should be as little interference as possible with the schoolmaster, but there should be perfect submission on his part if the necessity arises; and that, I think, you can only instil into the mind of a man who from early life has known what discipline means.

2264. The particular class to whom we are refer- ring have submitted certain objections to some of the regulations to which they are at present subjected, amongst which there appears to be put prominently forward the examination of their kit; that hardly seems to be necessary, does it?—I do not think that it is necessary. Some irregularity occurred, and it was felt that there ought to be some restraint on them, and then this order was given out; but there is no necessity for that order being carried out very strictly.

2265. Do you think that it is necessary that they should wear a sword and chevrons; would it not be better, while preserving a certain amount of uniform, that it should be rendered as little military as pos- sible?—Certain advantages would arise from that, because their duties are completely non-military, and therefore to that extent, if you had a separate uniform for them, there would be no disadvantage. They had a uniform so very like that of the officers that it was found to be better to make a change. On the other hand, as they have to deal with soldiers and soldiers only, or their children, a uniform is essential, because it carries with it a certain weight. A soldier attaches great importance to small matters, and the uniform is one of them, and the moment a man is in uniform he is in authority; a man in plain clothes has no authority at all, and we maintain that principle very stringently. We do not allow an officer to interfere unless he is in uniform, because the fact of his having a uniform on characterizes him as being a man in authority, and on the same principle, I say, that a certain distinctive and military mark of what he is, ought to be given to the schoolmaster.

H.R.H. the Duke of Cambridge, K.G.

7 April 1870.

2266. (*Lord de Ros.*) The same as in the case of the surgeon or assistant surgeon?—Yes. Status of schoolmasters.

2267. (*Chairman.*) The schoolmasters complain that their pay is rather insufficient; do you think that that is a well-founded complaint?—I think that their pay has been rather reduced of late. I admit that perhaps it is rather lower than it ought to be in the case of men who aspire to a higher sphere of knowledge.

2268. From the evidence which has been sub- mitted to us, it has, I think, been brought very clearly to our notice, that commanding officers do everything in their power to assist the schoolmaster in his duties?—I am sure that they do to the fullest extent; and I would let the schoolmaster be inter- fered with as little as possible. I am sure that the less he is interfered with the better; but, at the same time, he must perfectly understand that, if anything arises which requires interference, he must be sub- missive to any order or directions which he may receive.

2269. You would attest him and keep him under the Mutiny Act?—Yes; but I do not think that he should be superior to the serjeant-major. I think that only the serjeant-major ought to be superior to him in the regiment; and if the schoolmaster was put over him after a certain length of service, I am afraid that there would be a great clashing, whereas now there is none.

2270. It has been suggested to us that the liability of a schoolmaster to reduction to the ranks is an ob- jectionable contingency, and that dismissal would be a preferable punishment; would you agree in that opinion?—I decidedly think that there is a great awkwardness in reducing a schoolmaster to the ranks; at the same time dismissal is a very serious thing; a man's whole career is at an end, and it is a very serious punishment to give a man for, perhaps, an offence which in itself might be dealt with more leniently.

2271. Could your Royal Highness suggest any medium punishment?—I think that a man might be fined to a certain extent; a regulated scale of fines might certainly be inflicted for any minor offences, but for offences of a serious nature, which do not often occur, but which have now and then occurred, such as gross cases of drunkenness, or immorality, or cases of defalcation, I do not think that there is any alternative left, except to reduce the man to the ranks, unless you dismiss him. The only thing is that, if you dismiss him, he may afterwards give a great deal of trouble, by declaring that he has been ill-treated, and so on. There is not the same meed of justice given to a man who is dismissed as is given to a man who is reduced to the ranks, because he is still in the army; and he has the power of being brought forward again in various ways, and retrieving his character, while if you dismiss a man, he is ruined for ever.

2272. So that your Royal Highness rather thinks that reduction to the ranks is, under certain circum- stances, an indulgence?—It is decidedly more an indulgence than dismissal, though I very much object to it, if it is possible to avoid it.

2273. (*Lord de Ros.*) Would he not be a very mischievous man if you reduced him to the ranks?—Yes, he might be; but he might be very mischievous if you dismissed him, because you would have no control over him.

2274. (*Lt.-Col. Chesney.*) Might you not inflict upon him loss of service, as is done with a boatswain, and so on, in the navy?—Certainly.

2275. (*Sir C. Russell.*) I suppose that to those men, who were soldiers originally, a reduction to the ranks is practically no hardship at all?—It would certainly be a lesser hardship.

H.R.H. the Duke of Cambridge, K.G.

7 April 1870.

2276. But to those men who are civilians, it appears from the evidence which we have received, that it is a hardship ?—Yes ; and therefore I think that it is better to get schoolmasters from the ranks than to get civilians, because you can deal with men from the ranks much more satisfactorily than you can in the other way.

Recreation rooms.

2277. (*Chairman.*) Has your Royal Highness any strong opinion in regard to the canteen and recreation rooms being in juxtaposition or being separated ?—That is one of the most difficult questions to deal with. There is a great advantage in having them under one roof, but there are also very great disadvantages, and I am almost inclined to think that the disadvantages are more marked than the advantages. The advantages are these, that you can bring the management of the whole thing under one direction. The disadvantages are, that many a man goes to the canteen who would never think of going to the recreation room, and many a man goes to the recreation room who is not generally in the habit of going to the canteen. I am afraid that the recreation room would never attract a regular canteen man ; whereas, on the other hand, I should fear that a recreation room man would be very much attracted by the canteen if it was put so close before him. I am afraid that it would have an effect on the good men, and not on the bad. I think that it would not improve the bad men, but that it might have a demoralizing effect on the good men. Certainly the entrances ought to be kept quite separate. But I must admit that there is a very great difference of opinion in the army on that subject ; in fact, a Committee sat which reported in favour of the canteen and the recreation room being under one roof.

Model school, Chelsea.

2278. Would you be inclined to remove the Duke of York's School into the country ?—No, I am not in favour of it. I think that it is better to have it in London. The mothers and the friends of the boys can see their children here, whereas they could not do so in the country. I think that it would be very well if we could a little extend the premises, and if the Normal School was done away with you would have an opportunity of very materially improving the Institution. The situation is very healthy, and I believe that the only reason why the boys have not been so healthy as at the Hibernian School is because they have been so cramped for room. The situation of the Duke of York's School is on a gravelly soil, and we know that the Chelsea Barrack, which is close by, is very healthy.

2279. The only thing is that, generally speaking, the atmosphere of London is not supposed to be so good for children as that of the country ?—I have lived a good deal in London, and I confess that I think that it is the healthiest place I was ever in in my life ; and if you took the statistics I believe that you would find that London is healthier than most places with which you would meet. It has great advantages in the facility of obtaining access.

2280. I suppose that the boys get no holidays ?—No ; they get whole holidays, but they do not get continuous holidays.

2281. They do not go home ?—No.

2282. (*Lord de Ros.*) Has your Royal Highness been struck with the bad condition of those premises, and the bad state of the paint and whitewash and everything of that kind in that establishment ?—Certainly, but we have not money for it ; it is under the Office of Works, and we can do nothing.

2283. (*Lord E. Cecil.*) Does your Royal Highness think that there is sufficient room for recreation purposes ?—I think that they might make a great deal more of it in the large field in front of Chelsea Hospital ; they might avail themselves of the bridge, and they have great facilities to take the children to Battersea Park, and I should let them rove about there, and stray for two or three hours. I would give them a half-holiday twice a week, and they might play at cricket, or anything else, and breathe fresh air. I think that arrangements of that sort would make the boys very much more healthy than I admit they now are. They are very small boys, and therefore they are not accustomed to much roving about, or amusing themselves beyond the mere amusement of a little boy by playing with a ball, or a hoop, or something of that sort.

2284. (*Lord de Ros.*) Your Royal Highness knows the Hibernian School well ?—Yes.

2285. There is a great contrast ?—No doubt.

2286. There is an excellent playground there ?—An excellent one. I was very much surprised to see that it has been stated here that the boys of the Duke of York's School were supposed to behave so ill in going into church, and so on. I have inquired into that matter, and I cannot discover that there is any foundation for this assertion. I believe it will be found to be quite incorrect, and I regret the statement was made.

2287. (*Chairman.*) No schoolboys are very demure on entering church ?—No, but I have not heard a single complaint made.

2288. (*Lord de Ros.*) I was very much struck with the dirty state of the place ; the rooms were dirty, and the beds were not property or neatly made, particularly in the normal part of it ?—I am sorry to hear you say so.

If the Commission will allow me I should like to say a word more with reference to the recreation rooms. I think that the recreation rooms are an excellent system, and that the present canteen system is an excellent system ; but it has its disadvantages, and one is the great difficulty which we have in keeping serjeants in charge of the canteens from peculating. I am sorry to say that we have had more instances of that kind than could be conceived possible ; we have had constant changes of serjeants, and it was thought an advantage. Now, I believe it to be a great disadvantage ; I believe that if you got a steady non-commissioned officer who would attend to the matter, it would be a great improvement, and that he would not have the same desire to peculate as a man has who only takes the place for six months. A man takes it for six months, and he thinks that it is his harvest time, and he tries to make as much out of it as he can. We constantly have cases of most excellent men who get into difficulties at the canteen, and who are ruined for life. If we could have a change in that direction, I think that it would be very desirable. Then there is a subject connected with canteens which is of very great importance; there is a great deal of money often in hand, and the difficulty is what to do with this money. A committee of officers has hitherto superintended it ; but a committee of officers is rather a doubtful mode of supervision There are some regiments in which individual officers take great interest in the canteen ; and where that is the case there is very good supervision ; but I am sorry to say that there are a great many regiments in which the officers do not take the same interest in the matter ; besides they dislike having the charge of this money, and this can be easily understood, for if they have the charge of the money there is the responsibility of replacing money which may be lost. Officers do not like to have that responsibility. My conviction is, that the only way of getting over that difficulty, is by having a captain in every regiment receiving some remuneration for taking charge of the canteen and recreation room. I think that the same officer should have charge of the two. I do not think that they should be under the same roof if it could be avoided ; at all events there ought to be separate entrances ; but I think it essential that there should be an officer in every regiment to have charge of those funds ; and until you have that I am afraid you will find that the chances of irregularities or peculation, instead of diminishing, will only increase.

2289. Do you think that an allowance to the paymaster would effect that object ?—If the paymaster would undertake it, I should not object at all ; but the paymasters hitherto have always objected to undertake it, and you cannot force them to undertake

it. I think that in every regiment a captain should be paid for that duty, and that is the feeling throughout the army.

2290. (*Lt.-Col. Chesney.*) At present an officer may have to make up a large sum of money, such as 70*l.*?—Yes, that happened the other day. It is a question of very great importance, and as this subject is under consideration, I hope that it may attract the attention of the Commissioners.

2291. (*Chairman.*) Would your Royal Highness like to make any suggestion with regard to the amount of pay which an officer taking charge of the canteen should receive?—I think that such an officer ought to be paid the same amount as an adjutant's pay. You might oblige him to give security, so as to provide against defalcation, and so on. We should then get out of a very great difficulty. We are now in a very great difficulty, because we have constant defalcations, and we do not know where to get the money from. The officers say, "We are not responsible for this, we only superintend it; the serjeant "has neglected his duty, and therefore we decline to "pay." There is another thing upon which I should also wish to remark. I see that it has been stated that the money should be left more at the disposal of the commanding officers, as regards the profits from the canteen fund. The sum retained in hand at present has been reduced as much as possible We tried the other system, and it did not answer at all. The singular proposals which have been made as to how that money was to be spent are remarkable, and therefore the only way is not to allow much money to be kept in hand; and as to the surplus, we decide upon how it is to be spent, because as the canteen receipts arise from every non-commissioned officer and soldier of the regiment, it is essential that whatever you do with the money, it should be made generally useful to the regiment. For instance, commanding officers very often want to give it to pay for the baggage of married soldiers on the move, but that is of no advantage to the unmarried soldiers, and the large majority of soldiers are unmarried. I have had some very injudicious proposals made, which has satisfied me that the distribution of the profits should be regulated by authority.

2292. Would there be any objection to supplying that money to the recreation room?—To a certain extent I think that it might be applied to the recreation room, and with great advantage; but I think that there would be an amount of money in hand beyond what the recreation room would require, and I think that we should keep the distribution in our own hands. I do not object to coffee and tea in the recreation room, but I should very much object to the men in the recreation room having beer or spirits, or anything of that kind, because I think that it is not the place for it; it is intended to be a place for men to enjoy themselves rationally, and not to be interfered with by men who might become noisy and troublesome.

2293. (*Lt.-Col. Chesney.*) Do not the men now look upon the recreation room as a great privilege?—I am sure that they do.

2294. (*Maj.-Gen. E. Wilmot.*) You would allow them to have food in the recreation room?—Most assuredly, but I would not allow them to have anything in the shape of spirituous drinks.

2295. (*Sir D. A. Cameron.*) You would allow them to smoke there?—Certainly. On that point there is another matter which I think is of importance—there is no doubt that unless you have these recreation rooms in barracks they are of no use. If you have the recreation room away from the barracks, however good it may be, the men will not go to it. The moment a soldier is obliged to dress himself he will not go to these places. Now one would be very much surprised to see soldiers walking about London with white jackets unbuttoned, and walking about in their shirt sleeves. In the barrack you let them go about anyhow; they may go about in any way they like, and then they enjoy themselves; but if you force them to dress, they say, "We will not take the "trouble of going to this place, we will go to some "public house, where we can enjoy ourselves much "better." That has been found to be the case wherever the recreation rooms are away from the barracks.

2296. (*Chairman.*) Upon the subject of the schools, do you think that it would be necessary to maintain the Normal School at Chelsea?—I have very great doubts whether it would be necessary. I think that men who are intended for schoolmasters must pass examinations, and that they ought to have an opportunity of obtaining a certain amount of experience in instruction at a school. I think that you might do that by having such a class attached to the Duke of York's School; but I do not see the advantage of the Normal School, it is an entirely separate establishment, and I think that if we could get the premises which are now occupied by the Normal School, and could convert them to the uses of the Duke of York's School, it would be a great reason for not removing the Duke of York's School, because I think that it would improve it very much. I admit that the Duke of York's School requires certain improvements, and I should like it to have that increased amount of accommodation.

Normal school.

2297. Your Royal Highness is in favour of maintaining a school of musketry for the army?—I am very much in favour of it. I do not see how the army could go on without it. I have read with great regret the opinions of several commanding and other officers; but it must be remembered that commanding officers are apt to object to any arrangement which takes away their officers or men, even for a time, from their direct control. I believe that the system we have adopted at Hythe is thought so highly of abroad that the French school has been remodelled on our system, and that the Prussians have established a school on the model of Hythe, so that, although we are a non-military nation, we have actually taken the lead in this system. I admit that it is a very dull and extremely tedious system, and unless it is strictly kept up it will deteriorate, but it is essential. Commanding officers do not like whole companies of their regiments being taken off duty at a time for musketry instruction and practice, but that cannot be helped; it is impossible to have a proper system unless you do it.

School of Musketry.

2298. Do you think that it is absolutely necessary, not only that the officers should be instructed at Hythe, but that the rank and file should be passed through Hythe?—You do not pass a great many of the rank and file through Hythe, and it is a great advantage to pass a certain number of privates through, because many men who pass will probably become musketry instructors. It is exactly like sending a corporal and a private to the Maidstone establishment for riding.

2299. (*Lord de Ros.*) They are all selected for it?—They are all selected for it; and if the army at any time is to be increased, you have assistants who would be very useful, and, I think, it a very good thing, keeping it within due bounds, that a certain number of privates should be at Hythe. Then a certain amount of duty must be done there, and you may as well have these privates as any other men to perform this duty, and they will learn things which must hereafter be to their benefit. I cannot tell you the advantage which the school at Hythe has been to the army; it has raised the whole character of the non-commissioned officers and men, because it has made them think. I believe that they never thought at all till they went to Hythe, and since that system has been introduced, the education, and everything else, has been improved; but you must keep it up strictly. There is another thing which I should like to mention,—officers object to being taught what they call the elements and rudiments of drill. These are taught at Hythe, and with great advantage to the service. Old officers and young all go through the same course. They are taught the elements of drill in squads. In all foreign armies that is the case; in

H.R.H. the Duke of Cambridge, K.G.

7 April 1870.

School of Musketry.

the Prussian army the officers drill their own recruits —with us that is not the case, and I therefore consider the Hythe instruction in this respect of great advantage to the officers. I know that it is not popular, but that is no reason why it is undesirable; there are many things which are not popular, but I do not think them on that account undesirable.

2300. (*Chairman.*) Do you think that there would be any advantage in establishing the school of musketry in the neighbourhood of a great garrison, rather than where it is?—I would not do so, because I think that it is a thing which is apart, and that it ought to be kept separate; I do not wish to mix it with anything else; it is established for study, and for no other purpose, and the sooner the persons who are there get through their study the better, and they will return to their regiments. I am not wedded to the town of Hythe; you may place it anywhere you like, but I would not put the musketry school in a garrison. Then, I also wish to remark, that Hythe is directly under the Horse Guards; no order emanates from Hythe which does not emanate from the Adjutant-General, and, therefore, the idea of Hythe not being head-quarters is a complete mistake. The Adjutant-General has charge of the school, and at the same time the general superintendence of that establishment; therefore the officer in charge of Hythe is virtually the superintendent under the Horse Guards, in the same way as Lord de Ros will remember that at the riding establishment the colonel in charge of it was responsible under the Horse Guards for the riding of the army; and the superintendent at Hythe cannot issue any orders or instructions without their being my orders or instructions, and he reports to me upon every subject that arises. The inspectors of musketry are on the staff of the army; they are not officers of Hythe. They are exactly like brigade majors. A brigade major of the 67th regiment happens to be at Aldershot, and his own regiment is there, and he gives orders to that regiment, certainly not by virtue of his own position, but by virtue of the orders of his general, and therefore it is not a question between a captain of the regiment and the colonel. In the same way the musketry inspector is also a captain of the regiment, and he gives reports to us because he is on the staff, and is employed by us for those duties.

2301. (*Lord de Ros.*) Supposing that the chief of the establishment at Hythe were called assistant adjutant-general for musketry, would there be any objection to that designation?—No; you may call him anything you like, but he has been called inspector of musketry because that is his especial duty, just as we have a commandant of the riding establishment, because that is his especial duty.

2302. (*Chairman.*) In connexion with this subject, one of our witnesses made the suggestion that if one of these inspectors of musketry were to report unfavourably of a regiment it might bring him into collision with the commanding officer of that regiment, and that when once an unpleasantness of that kind had occurred, the commanding officer would become prejudiced against the system of musketry instruction, and the shooting of the regiment would consequently suffer. As a civilian I was much struck with that remark, and I asked the witness in reply whether the discipline of the army, as exercised at the Horse Guards, was not sufficient to overcome any feeling of that kind?—Any officer who would give an answer in the terms which you mention knows very little of his duty. Some of the commanding officers take very little interest in musketry, but they are responsible for the musketry of the regiment; and I always find that in those regiments where commanding officers attend to these duties, the regiment shoots well; but it is in regiments where commanding officers and the officers in general pay little attention to the subject, that the men shoot badly; this is much to be regretted. I am quite satisfied that in these cases neither the commanding officer nor the company officers attend properly to these duties. Every now and then we have a bad musketry instructor, and then he is immediately removed, and another officer is put in his place.

2303. Then you would not be inclined to make any alteration in the present system?—I would not make the slightest alteration, because I think that if you do so you will fall off in shooting, whereas now it is admirable, and as we have a very small army, we ought to keep it as efficient as we can. I cannot understand how these musketry instructors are to be taught if you have not a school of instruction. As to the commanding officers teaching the musketry instructors, I should be very sorry to see such a system adopted.

2304. Do you think that it would be possible to impose upon the regimental musketry instructor any other duties in addition to those which he discharges, such as instructing the junior officers of the regiment in the elements of field fortification?—I think that there are periods of the year when his time is fully occupied, and more than occupied; but there are other times when he has nothing or very little to do, and during those times if you could make him available for other duties, I think that it would be very desirable to do so. I think that the musketry instructor ought to be called upon to do any duties which are desirable. If I had the command of a regiment I should make my musketry instructor do any duty which I thought fit, if he had not other duty to perform; if he objected, I should report him, and the authorities would support the commanding officer. If you chose to make the musketry instructor available for other duties, I have no doubt that you can do so, but not during the time of musketry instruction. No man has a heavier duty on his hand than the musketry instructor then has.

2305. Those are all the questions which I desire to put to your Royal Highness, but we shall be very glad to be favoured with any further suggestions which may occur to you?—I saw that it was suggested that the Duke of York's School and the Hibernian School should not be under military authority, which, I think, would be a great mistake. I cannot help thinking that, excepting they are physically disqualified, the boys at the Hibernian School and at the Duke of York's School ought to go into the army; the country gives them all the advantage of being educated, and I think that they are bound to go into the army. Of course if boys are physically unfit, or if there is any reason which makes it undesirable that they should go into the army, they ought not to be required to do so; but, unless they are physically unfit without very good reason to the contrary, I think that those boys should go into the army, because they turn out very good boys and capital boys for the band, and that sort of thing; and as the public pay for their education, I think that the public have a right to their services.

2306. (*Lord de Ros.*) Would you allow them to go into the navy?—Yes. Then I think it very desirable that they should be encouraged more in music; from many industrial schools we take boys who are better musicians than the boys at the Duke of York's School, and I think that that is owing to their not paying as much attention to music; but they turn out very well, and they are very good boys.

2307. (*Lord E. Cecil.*) Would your Royal Highness give the boys greater advantages both at the Duke of York's School and at the Hibernian School in industrial training?—They are very small and young boys, and you cannot do very much with them. I do not think that it is desirable to keep them after 14; after 14 they are difficult to manage, and do better in the regiments, but up to the age of 14 the more industrial training they get the better. I think that bringing them up to music is a great advantage to them, and that after all is a sort of industrial training.

2308. (*Lord de Ros.*) I believe the Hibernian School clothes itself, in a great measure?—I should like to see the Duke of York's School clothe itself.

School of Musketry.

2309. (*Maj.-Gen. Wilmot.*) At many large schools in the neighbourhood of London they do all the repairs of the buildings?—Yes; and I do not see why they should not do so in the present instance as far as their age will admit.

I would further remark with regard to the system of musketry in the army, that I think it very desirable to encourage competition in shooting. I think that the men have not ammunition enough. Take the case of Volunteers; a Volunteer fires away in a week 90 rounds, and thinks nothing of it. Why are men not to have more ammunition? Of course it ought not to be thrown away, but I think that competition should be encouraged, and that you should make regiments fire against regiments, and sergeants against corporals, or sergeants among themselves. All those things are very desirable, and as it is a dull thing as a rule, I think that the more you encourage it by these competitions the more life you throw into the whole system.

2310. (*Lord de Ros.*) I believe that in some case the men have subscribed for practice ammunition?—Yes, but I think that we ought to do more in that way; we are kept to a hard and fast line of 90 rounds a man. I do not know that I have anything further to add.

2311. (*Chairman.*) There is one question which I have omitted to put to your Royal Highness. With regard to the special classes, does that system work satisfactorily?—I think that it is a most desirable system, and I am glad it has been referred to. I think that if you had special classes men would find great advantage from them, because those who worked through them would certainly get on and get to be non-commissioned officers. That is a great advantage to them, and it would encourage men to pass as recruits, and prepare themselves for these special classes when their turn came, and in that way the more you encourage them the better.

2312. (*Lord de Ros.*) But would you excuse them from duty in order to attend the special classes?—Certainly; from evening parades and things of that sort. In most regiments men who are disposed to go to school are exempted from evening parades.

2313. Would you excuse them from mounting guard?—Mounting guard is a very difficult question, because in some regiments in garrisons that duty is heavy, and, therefore, you would find many men very glad to go to these classes for the purpose of getting off guards. That would not do; it would throw the duty upon others. I do not think that they could be excused from certain duties, but I think that the commanding officers would always regulate the duties to be performed to meet the object in view.

2314. (*Maj.-Gen. Wilmot.*) I think that we found that the feeling at Hythe was very much in favour of increasing the number of non-commissioned officers, and diminishing the number of privates?—I quite agree that you ought not to have too many privates, but if there is a smart young private who goes there, and goes through his preliminary drill for a non-commissioned musketry instructor at Hythe, he probably gets better instruction there than he would get elsewhere, and when his time came he would get through his course in a very short period, and he would be fully qualified as a musketry instructor. You must have a certain number of duty men there, and I think it much better to have them belonging to Hythe than having a detachment of troops specially sent for duty. I do not think that that would answer.

2315. (*Sir D. A. Cameron.*) Colonel Haliday mentioned that the men were badly selected?—I would have a selection.

Army schools.

2316. (*Lt.-Col. Chesney.*) I would ask your Royal Highness, with reference to the numbers of hours a week which should be set apart for school, whether you would prefer leaving it to the commanding officers of regiments?—I should prefer leaving the mode of doing it to the discretion of the commanding officers; it is more convenient.

2317. With regard to the rank of a schoolmaster, would it be objectionable if he held a serjeant-major's rank, and was regarded as non-combatant, in the same way as in the mess there are persons, staff clerks for instance, nominally senior, but who always sit below the serjeant-major?—I think that the serjeant-major of the regiment should always be supreme and should be the senior non-commissioned officer of the corps. Now, if you do not make the schoolmaster a warrant officer (which I hope you will not think of doing), he must be a man of the regiment, and you ought to have no man in the regiment higher than the serjeant-major; there must be one person supreme, and that is the serjeant-major.

2318. With regard to the industrial work of the boys at the two military schools to which reference has been made, would your Royal Highness be inclined to encourage them to do industrial work on certain days in the week, as is done at certain civil schools?—Certainly; I think it very desirable.

2319. Would your Royal Highness be in favour of giving to soldiers in a large garrison some sort of large room for lectures and entertainments, better than is the case now, say at Aldershot for instance?—At Aldershot I think that there should be a good room. We have the old club house, where there is a very good room, but the club house does not belong to the public. At present I understand the club to be entirely under private management. I think that that is a great mistake. All the large stations ought, in my opinion, to have some such room.

His Royal Highness withdrew.

Adjourned.

APPENDIX.

APPENDIX I.—ARMY SCHOOLS, LIBRARIES, RECREATION ROOMS, AND LECTURES.

A.—QUESTIONS AND REPLIES ON THE SUBJECT.

QUESTIONS ISSUED BY THE COMMISSION.

I. Would there, in your opinion, be any difficulty in setting aside a certain time daily, during which attendance at school should be compulsory on soldiers not on duty, who have not given proof of the possession of a satisfactory amount of rudimentary education?

II. In the event of a system of compulsory attendance at school being introduced generally into the service, would it, in your opinion, be preferable that such attendance should commence with recruits on first joining their regiments, or be deferred until after the recruit has been dismissed from drill?

III. Do you think that it would be advisable, or the contrary, to make a third-class certificate of education an indispensable qualification for promotion to the rank of full corporal, and a second-class certificate for promotion to the rank of serjeant, uniformly throughout the service?

IV. Would you see any objection to giving schoolmasters, after a certain length of service, the rank of warrant officers, as contemplated by the school regulations of July 1857; or do you consider the present regimental position of schoolmasters sufficiently good to secure a satisfactory class of candidates for the appointments?

V. Will you favour the Commission with your opinion as to the practical working and results of the present regulations for libraries and recreation rooms, and with any suggestions for alterations or improvements which you may think it desirable to make in connexion with this subject?

Do you consider that it would be advantageous, as a general rule, to place the recreation room adjoining to, though still separate from, the canteen?

VI. Have you reason to be satisfied with the present system of lectures to the troops, or do you consider that their attractions and utility could be in any way increased?

The above questions were addressed to the following officers:—

General the Right Hon. Lord Strathnairn, G.C.B., &c., &c., Commander of the Forces in Ireland.
Lieut.-General the Hon. Sir J. Yorke Scarlett, G.C.B., Commanding the Aldershot Division.
Lieut.-General Sir J. Hope Grant, G.C.B., Quartermaster-General to the Forces.
Lieut.-General Lord W. Paulet, K.C.B., Adjutant-General to the Forces.
Lieut.-General H. Eyre.
Major-General D. Russell, C.B., Commanding the South-Eastern District.
Major-General Freeman Murray, Commanding the Chatham District.
Major-General G. J. Carey, C.B., Commanding 2nd Infantry Brigade, Aldershot.
Brevet-Colonel C. R. Egerton, Deputy Adjutant-General to the Forces.
Brevet-Colonel J. W. Armstrong, C.B., Deputy Adjutant-General, Ireland.
Colonel R. P. Radcliffe, Commanding the Royal Artillery in Ireland.
Colonel A. T. Phillpotts, Commanding Royal Horse Artillery, Woolwich.
Colonel J. Hall Smyth, C.B., Commanding Royal Artillery, Aldershot.
Colonel G. P. Eaton, Commanding 17th Brigade, Royal Artillery, Dover.
Brevet-Colonel C. Cameron Shute, C.B., Commanding 4th Dragoon Guards.
Lieut.-Colonel R. Clarke, Commanding 7th Dragoon Guards.
Lieut.-Colonel A. Nugent, Commanding Scots Greys.
Lieut.-Colonel the Hon. I. de V. Fiennes, Commanding 9th Lancers.
Brevet-Colonel V. Baker, Commanding 10th Hussars.
Brevet-Colonel T. Oakes, C.B., Commanding 12th Lancers.
Brevet-Colonel Soame G. Jenyns, C.B., Commanding 13th Hussars.
Brevet-Colonel E. B. Cureton, Commandant of the Cavalry Depôt, Canterbury.
Brevet-Colonel C. W. Randolph, Commanding 3rd Battalion Grenadier Guards.
Major and Brevet-Colonel W. G. Cameron, C.B., Commanding 1st Battalion, 4th Regiment.
Brevet-Colonel A. C. Robertson, Commanding 2nd Battalion, 8th Regiment.
Lieut.-Colonel the Hon. S. Mostyn, Commanding 2nd Battalion, 23rd Royal Welsh Fusiliers.
Brevet-Colonel J. C. McLeod, Commanding 42nd Royal Highlanders.
Brevet-Colonel R. B. Hawley, Commanding 4th Battalion, 60th Rifles.
Lieut.-Colonel J. Sprot, Commanding 91st Highlanders.
Brevet-Colonel E. T. Gloster, Commanding 97th Regiment.
Brevet-Colonel J. W. S. Smith, C.B., Commanding 1st Depôt Battalion, Chatham.
Brevet-Colonel A. M. McDonald, Commanding 7th Depôt Battalion, Winchester.

(i.)—ANSWERS received from GENERAL LORD STRATHNAIRN, G.C.B., &c. &c., Commander of the Forces in Ireland.

I. The most gifted men are often the idlest, and I think that, so far from there being any objection, it would be a benefit to the soldier and an advantage to the service to render his instruction compulsory when off duty, *not daily*, but on certain days of the week.

The desideratum is to gain the goodwill of the soldier and to direct his inclinations to education, and for this reason I would not compel him to come to school *daily*, but only so often as would ensure his acquiring instruction gradually, leaving him plenty of time for recreation and healthy exercise.

The duties of artillery (particularly horse artillery) and cavalry soldiers are so engrossing, on account of their having horses and guns to clean, &c., in addition to the work of an infantry soldier, that when they have to attend field-days they have scarcely any time whatever for recreation. To make attendance at school compulsory on them daily would be neither right nor politic.

II. Certainly not on their first joining; it would sicken them of the service. This would not prevent them being encouraged to come to school.

III. Certainly not; I think that gallant and valuable non-commissioned officers, who would be of the greatest use, and give the best example in dangerous and trying circumstances in the field, and who possess the art of exercising discipline, would be lost to the service, were these certificates of education required.

IV. I see no objection, but think that it would be a very proper encouragement for them; but they should possess not only the requisite knowledge, but the tact and temper required for teaching.

V. I think that in foreign armies a description of instruction and reading is given by means of the libraries which is attractive to them as soldiers, and acts advantageously on their military feeling. Regimental libraries are supplied with books containing selections from campaigns of the good deeds and gallant conduct of officers and soldiers in the field,—saving a colour, a general, or an officer,—cutting their way, when surprised, through an enemy,—rescuing or saving a wounded comrade,—swimming a river in heavy marching order,—good or devoted conduct.

I have recently reported on the disadvantageous effect which the new and improved system of canteens, which sell good and popular eatables, exercise on the recreation rooms, and their useful appendage, the refreshment rooms. All my constant efforts to keep them up, except in isolated cases, where a commanding officer takes a great interest in, and understands the matter, have failed. In India, where at that time no competition existed between the refreshment room and the new canteen system, the system of refreshment rooms was attended with good results. When supplied with the eatables and drinkables which the soldiers like, they added to the attraction of the library and recreation room. So unable have I found the refreshment system in Ireland to compete with the canteen that I have suggested the canteen should furnish the refreshment room with refreshments. The Commission might like to ask for my reports on this subject.

It cannot be denied that the success of the whole system of refreshment and recreation rooms is not nearly so great in Great Britain as it is in India; besides other disadvantages, it has to compete with that great attraction the tap and the public house. In India British regiments under my command had from 2,000*l.* to 7,000*l.* in the savings bank. Their return to England caused the greater part, if not all, of these sums to disappear. Still I think that my suggestion as to the canteens, and one or two other conditions, would place them in a better position and render them more attractive and of greater use than at present.

VI. Lectures have not come before me as a recognized system.

Strathnairn, General,
Commander of the Forces in Ireland.

(ii.)—Answers received from Lieut.-General the Hon. Sir J. Yorke Scarlett, G.C.B., commanding the Aldershot Division.

I. In mounted corps the time of the soldier is so fully occupied by his duties that he could ill spare more than one hour daily, if that, for compulsory education. In infantry, time could be found.

II. When a recruit joins either cavalry or infantry, the school and the gymnasium should supple his mind and body before he commences anything beyond the most elementary military drill; neither should be made irksome to him, they should be a pleasing introduction to military life.

III. I am not aware how much may be included in third or second class certificates; but I am of opinion that no private should be made a corporal unless he can read and write and has a knowledge of the simple rules and practice of arithmetic, all which are necessary for the performance of his duties.

The colour-serjeant requires a better knowledge of numbers and book-keeping; of course the more all grades know the better, provided the knowledge is accompanied by firmness of character, good temper, and discretion, and strict straightforward honesty; without these last-named qualities the more a non-commissioned officer knows the worse servant he will be.

IV. I don't see the advantage of making the schoolmaster a warrant officer if it places him above the regimental serjeant-major, who ought to be the man of most importance next to the officers.

If it is desired to raise the importance of education in a regiment there should be a *Captain Instructor* for fortification, drawing, and languages, with a non-commissioned staff under him to superintend instruction generally in the regiment.

V. The present regulations with regard to libraries and recreation rooms appear to work with good results. More light is needed in the recreation rooms, as men will not go to them if gloomy.

There is no objection to the vicinity of the canteen if on the regimental system and under a separate roof.

VI. The lectures are useful, instructive, and entertaining as a rule, but, of course, much depends on the lecturer. I think the men appreciate lectures of a familiar nature on science, history, or wars, more than magic lanterns and comic performances; they don't like to be treated as children. A good lecture room and a good theatre have much influence over men, and tend to keep them from evil haunts.

J. Yorke Scarlett, Lieut.-General,
Commanding Division, Aldershot.

(iii.)—Answers received from Lieut.-General Sir J. Hope Grant, G.C.B., Quartermaster-General to the Forces.

I. Should the authorities consider they have sufficient power to make a soldier's attendance at the school compulsory, I conceive one hour in the day might be set aside for this purpose, to train men who are not sufficiently educated. But, in my opinion, an education beyond reading, writing, and arithmetic, as far as the rule of three, is not required for a private soldier.

II. The recruit in the summer season has little time to spare for education. But during the winter months he could well afford an hour or two from 4 o'clock to 6. In India it is different. There is abundance of time during the day when a man cannot go out of barracks, which could be devoted to education.

The commanding officer of a regiment should, in my opinion, have the power to make it compulsory for every recruit to attend school.

III. It would be very advisable *not* to promote non-commissioned officers without a certificate, as stated in the question; but commanding officers, at the same time, should have it in their power to promote a man for distinguished conduct in the field, for undoubted good character, or who might be well adapted to make a good drill serjeant. These men would no doubt try to improve their education and attend school, though perhaps unable to obtain a certificate.

IV. I would not raise a schoolmaster above his present position. If made a warrant officer he would rank above all non-commissioned officers, and would not be able to associate with them. He also would not be able to do so with the officers. His present position, in my opinion, is quite high enough. I would even make their dress less like that of an officer.

V. The regulations for libraries and recreation rooms are excellent. I have no suggestions to make in connexion with this subject.

I think it would be better to build the recreation room and canteen separate. But, if they are to be together, in my opinion, the entrances should be from different sides of the building. No doorway should be provided between the canteen and recreation room.

VI. The present system of lectures is occasionally very interesting, but it depends upon the ability of the army schoolmaster, or the individual officers who give the lectures. When not likely to be amusing the attendance is very small. The magic-lantern is of very little use to the men, but a great amusement to the children of a regiment.

Remarks.

I should conceive it very advisable to place *all* schools for the army entirely under the control of the Director General, and all inspectors to be appointed from home. While I commanded a regiment in India (up to 1857) the school was only once visited by an inspector, about a couple of months before I left the regiment. I had no army schoolmaster; a serjeant in the regiment performed the duty very creditably. The recruits were never asked the question whether they would attend school or not. All were obliged to go, and apparently had no objection; but with the old soldiers it was left optional. Some eight or ten per troop attended. The children in India were educated in the same simple manner as the soldiers—in reading, arithmetic, and writing. It would, however, be, in my opinion, a great improvement if the boys were taught trades, viz., carpentering, shoemaking, &c., and especially in a cavalry regiment, working at the forge. This would tend to make them useful soldiers and also give them the means of supporting themselves after they leave the army.

J. Hope Grant,
Horse Guards, Lieut.-General, Q. M. G.
9th March 1870.

v.)—ANSWERS received from LIEUT.-GENERAL LORD W. PAULET, K.C.B., Adjutant-General to the Forces.

I. I am of opinion that compulsory education of adults annot be carried out, and I consider para. 453, section 7, ueen's regulations, provides for everything necessary nder this head as regards soldiers.

II. If compulsory attendance is enforced, I think that e recruit should be excused until dismissed from drill, uring which his time is fully occupied.

III. If there are men with these certificates available would give them the preference, but not to the exclusion soldiers of proved valour, or of those who showed tact d temper as disciplinarians.

IV. I would not give the schoolmaster superior rank to e serjeant major. I believe as many candidates come rward as are necessary to fill the vacant appointments.

V. I think they work well.

The further the library and recreation room are separated om the canteen the better, so that they are within the rrack wall, and the men are not obliged to dress to take lvantage of them.

VI. I believe the lectures are very satisfactory, well ttended, and afford interest and amusement to the soldiers.

W. PAULET,
Adjutant-General.

---

v.)—ANSWERS received from LIEUTENANT-GENERAL H. EYRE.

I. Generally speaking there is no real difficulty in finding ime for the soldiers of the infantry *not on duty* attending chool.

Exceptional circumstances may occasionally interfere o prevent it, but it rarely happens that a commanding fficer may not be able to make the necessary arrangements r so desirable an object.

When a regiment happens to be in garrison, where the en's duties are very heavy, of course the facility to attend chool is lessened.

In the cavalry the men as a rule have less time than n the infantry; but in both the commanding officer can enerally make time for some school instruction.

As to attendance at school being made compulsory, I hink anything of the kind would be very undesirable and ery futile. It is useless to march a man to the school and it him down to the table if he is determined not to learn; nd there always has been more or less jealousy on the art of our soldiers on this subject. "When they enlisted they did not expect to be sent to school;" this stupid otion should be corrected when they are attested as ecruits.

If proper encouragement is given I am sure that all those who are worth teaching may be attracted to the school; and nothing more effectually does it than a liberal exemption from drills, of which the well-drilled soldier has too many in general. Of course such exemption would be conditional on attending school and being well reported of by the schoolmaster.

The system of national education which has been submitted to Parliament, if successful in the country, can scarcely fail eventually to have more or less effect upon the army, by means of the recruits before they enlist having had somewhat more instruction at the parish schools than the generality of them have now. Of course some considerable time must elapse before this can be seriously felt, if it ever is.

In the meantime the new scheme of short enlistments makes the education of our soldiers, especially the recruits, more than ever a question for the consideration of the Commission.

Unless the plan of enlistment (as I understand it) is modified with respect to the non-commissioned officers, they will relinquish their active service at the end of six or three years; indeed, after the present generation of non-commissioned officers are gone, their successors will probably be a very short time non-commissioned officers before they too are discharged to the Reserve, and the demand for *qualified* men to fill the constantly recurring vacancies will be incessant, and greater than the supply.

With us, this is one of the difficulties of effectually carrying out a system of short enlistments. I believe it will have to be qualified, as far as non-commissioned officers are concerned, by some special arrangement for keeping them, at least the good ones, for a longer term. The younger the private soldiers are, of course the more you require experienced and educated non-commissioned officers.

Any good rule which is acted upon with respect to the officers of the army, should, I think, be applied in principle to the soldier if possible. At Sandhurst, for example, valuable prizes (besides their commissions) are offered to those who distinguish themselves by their proficiency and their general conduct. It may be worth considering whether the same principle might not with advantage be applied to the soldiers' schools. But instead of books and prizes of that kind, I rather think that small sums of money given to the men, or to their credit at the savings' bank, would be more valued; or rewards of each kind could be tried.

II. Subject to what I have said in the foregoing answer to Question I. about compulsion, I consider that recruits cannot too soon be taught to look upon the school attendance as an important part of military training, but, till they have completed their drills, their attendance at the school should be made very easy to them, the drills and schooling being so proportioned that the whole time occupied by both may not exceed that prescribed for parades.

The 32nd Article of War implies (but does not distinctly state) that attendance at school may be enforced if thought necessary, and in general I believe that the recruits will at first be found to go to the schools readily enough, and without disputing their liability to be sent there. It is afterwards that they take up the idea of the old soldier, and attend less willingly.

There is certainly some inconsistency between this 32nd Article of War and the army regulations, as well as the practice of the service, and there is no doubt that this and every other question relating to the soldier should be made clear and unmistakeable.

In order to promote this object, and to remove any uncertainty with respect to the soldiers of the future being subject to attend their regimental schools for instruction, I feel sure that it is very desirable to have the same made known to all recruits on their being attested; and, still more to impress its importance upon them afterwards, I recommend a paragraph to that effect being added to those already printed in the soldier's pocket ledger for his information and guidance on various matters. The young soldiers read over and consider these well-intentioned memoranda very constantly. Moreover, such admonitory observations serve to show their friends what is done for their improvement.

III. No soldier should be made a corporal unless he can obtain at least a third-class certificate; and a second-class one should be required for a serjeant.

To promote uneducated privates to be non-commissioned officers is very injurious to the service, and contrary to reason.

There are special and appropriate rewards for soldiers of good, long, faithful, or meritorious service, without entrusting them with important duties for which their want of education makes them totally unfit.

To see uneducated men made non-commissioned officers is little encouragement to the young soldiers to qualify for such advancement by improving themselves at school.

The admirable plan of training up boys for the navy I have often thought might be applied to the army, with benefit alike to the service and to the country. It would not only provide annually for hundreds of destitute boys, but would eventually supply an educated class of young men well qualified by education to make good non-commissioned officers.

However, I confess I am not prepared to propose any matured scheme for consideration.

IV. I think that the schoolmasters of each grade are extremely well provided for in all respects, and I know of nothing to justify any addition to the privileges which they now enjoy.

A superintending schoolmaster has already the relative rank of a commissioned officer (ensign), with the pay exceeding that of a lieutenant of under seven years; and the same class of schoolmaster, after 14 years' service, receives 8*s.* a day, being a higher rate than any commissioned officer under the rank of captain. Then the other advantages of schoolmasters are very great, and they are comparatively well provided for, whether by half-pay or pension.

Of course it may sometimes happen that a schoolmaster may have proved himself to be of such superior acquirements and so valuable, that his case deserves exceptional consideration. I only object to *promising* any further promotions as a *right*.

I presume it is known to the Commissioners that at present there is no such rank in the army as that of "warrant officer," although it exists in the navy.

This question relating to the schoolmasters naturally suggests another of some interest, viz., Has the present system of instruction in our regimental schools for non-commissioned officers and privates and soldiers' children been so successful as to fully justify the great additional

expense incurred by it, and to what extent has it proved superior to the old system? I much doubt whether the service receives the full value of the additional money thus expended. I even doubt whether as many soldiers are now instructed to qualify for non-commissioned officers as there were formerly when the commanding officers of regiments were more personally responsible than they consider themselves at present, and when they selected their own schoolmasters.

V. The present system of libraries and recreation rooms is founded, I believe, on recommendations which were made by a committee, of which I was the president, in 1861.

I am not prepared to say whether all the recommendations contained in that report have been fully carried out everywhere, but I know that many of them have been adopted. In old barracks difficulties about the required accommodation have existed.

I have reason to believe that the plan recommended with respect to libraries has given full satisfaction.

As to recreation rooms, I am very strongly in favour of their being quite a separate establishment from the canteen in every sense. If they are not, they become virtually a mere extension of the canteen, and will not be worth continuing. What with the canteens inside the barracks, and public-houses every few yards outside, as is the case at all military stations, the facilities for the full enjoyment of such places of refreshment are ample; but places of resort like the recreation rooms, which are intended to be altogether more refined in their character than canteens or public-houses, are not to be found.

There are in every regiment more non-commissioned officers and privates than is generally supposed to whom the chief recommendation of the recreation rooms would be their contrast to drinking places; and this would be still more the case, no doubt, if a higher class of recruits should be attracted to the ranks of the army by the short term of service or by the many advantages which are every day being given to good soldiers. The two establishments cannot be connected or in contact without the influence of the canteen prevailing.

VI. Of lectures I am not aware that there is really any organised system. They are sanctioned and encouraged by the regulations of the army, and they more or less take place from time to time when some officer or other party volunteers to deliver one.

Possibly the Council of Military Education could make some arrangement for procuring periodically such printed lectures of an instructive and amusing kind as may have been delivered in the different institutions, and may be, at all events some of them, suitable to soldiers. A sufficient supply of suitable lectures prepared by officers, or even by the schoolmasters, cannot be calculated on; and printed ones will read equally well, provided they are of an interesting kind. It is useless to attempt dry ones, however clever they may be.

In the report of the committee of August 1861, to which I have alluded, trades-rooms or workshops were suggested, where the accommodation would admit of them. The Commission having entered on the subject of recreation rooms, they may possibly consider the question of trades worth notice, for it must be remembered that there are many trades which would never be brought into active use in carrying out repairs of barracks or any other Government work that is likely to be done by the troops.

Henry Eyre,
3rd March 1870. Lieut.-General.

(vi.)—Answers received from Major-General D. Russell, C.B., commanding the South-Eastern District.

I. None. The attendance at the gymnasium of soldiers under 10 years' service is compulsory. All men under six years' service might in like manner be compelled to attend school.

When a soldier can read his Bible correctly, write a decent letter to his friends, and do the first four rules of arithmetic, compulsory attendance might be dispensed with, while every encouragement should be held out to him to continue to attend of his own free will.

In 1848 an order was issued in the 84th regiment that all men joining should attend school until they could sign their names in the company's ledger.

A recruit, after a short attendance, objected to do so any longer, stating that he had no wish to learn to read and write, and that I had no right to make him. I pointed out to him his folly and his sin, and told him I was quite aware I had no power to make him learn, but that I had authority to order him to parade when and where I pleased. I accordingly directed him to parade at the school with the other recruits, and to remain there with his book and slate before him until all were dismissed.

If my recollection be correct, this man afterwards qualified for a non-commissioned officer.

No objection was ever afterwards made by any one to attending at school.

II. The attendance should commence with recruits on their first joining their regiments—one hour every evening, excepting on Saturday—and be continued until each man has acquired the knowledge specified in the previous answer.

This might tend to break the present ruinous habit of soldiers rushing out of barracks the instant their work is done—too generally to take part in the iniquities so often provided for them in the immediate neighbourhood of their quarters.

Education and character would be a better standard for recruiting than inches.

III. Most desirable that there should be an educational test for the promotion of non-commissioned officers, but I should be inclined to leave the qualifications to be defined by the commanding officer according to the circumstances of the regiment.

The following scale was introduced into the 84th regiment in 1848, and worked admirably until the regiment took the field in 1857:—

"For the appointment of lance-corporal.—A private must "be able to read and write tolerably, to make out a decent "guard report, and read written orders.

"Before promoted to corporal.—He must have so far "improved in his reading and writing as to do both well; "he must be perfect in the first four rules of arithmetic; "and possess a thorough knowledge of duties in camp and "garrison, including advance and rear guards and flank "patrols.

"Before promotion to serjeant.—He must be able to "write correctly from dictation; and in arithmetic, have "advanced as far as and including the rule of three; must "have acquired some knowledge of geography, history, and "grammar, and be able to answer any question in com-"pany drill, including light infantry; drill a squad of "recruits, without arms, and put a company through "company's drill.

"Before promotion to colour serjeant.—In arithmetic he "must have advanced as far as the first four rules of "fractions, including practice; have acquired a good know-"ledge of geography; be thoroughly acquainted with all "the details of company's duty, payment and messing of "a company, &c. He must be able to answer any question "in battalion drill, and command a company at drill, "including light infantry."

IV. Yes, I should be sorry indeed to see the schoolmaster higher in rank than the regimental serjeant-major. The present position of schoolmasters is sufficiently good to secure all that is required.

The great want is that of soldier assistants. Inducements are not held out to men to qualify, and when qualified to retain those appointments.

V. The working and results I consider good; and the benefits to be derived from libraries and recreation rooms will be largely increased, should education be made compulsory. Much, however, in all these matters depends on the views entertained and the personal interest manifested by commanding officers.

I am of opinion that the recreation room should be at the farther end of the barracks from the canteen. And I annex a copy of a letter I addressed to the Assistant Quartermaster General, Aldershot, in March 1866, when called upon to give my opinion on the proposition to unite the canteen and recreation rooms under one roof.

"I desire to express my decided dissent from the pro-"posed arrangement, as I consider it to be one that would "go far to nullify all the efforts made of late years to "raise the tone and morals of the British soldier.

"I am of opinion that the canteen should be for the sale "of liquor alone, that nothing else should be obtain-"able at it, that its situation should be as far as possible "from the recreation room, that, while the liquor sold "should be invariably of the best quality, no extraordinary "inducements should be held out for its consumption, "but that, on the contrary, all attractions should be "devised and arranged in a regiment with a view of "encouraging the men to frequent the recreation room.

"I consequently hold that the reading, recreation, and "refreshment rooms, and grocery store, should be under "one roof and one management. And I submit that thus "the country would possess a happier, a healthier, and "a better army, in every sense of the word.

"Many a young soldier would be saved from becoming "an habitual tippler, to degenerate in due time into an "habitual drunkard, and might be led to see that there

was another end in existence beyond that of mere sensual indulgence.

"A defaulter forbidden the canteen, but admitted to the recreation and refreshment rooms, might be encouraged to reform his ways.

"An old soldier striving desperately to put on a badge before discharge might have some hope if the buildings were thus separated, which he could never possess with the smell of liquor continually before him.

"Wives and mothers going for their tea and sugar, soldiers going for their bacon, tobacco, &c., would not be tempted to take a glass.

"The recreation and reading rooms as now established at this camp, by their quiet tranquillity, attract of an evening many a man tired of noise and racket. They would by this proposed change become liable to the intrusion of half-drunken soldiers, and degenerate into scenes of noisy strife and contention, and pots of beer would be the stakes played for at the various games, the present frequenters being either corrupted or drawn away.

"I feel strongly on this subject, knowing well the utter ruin the proposed amalgamation would bring upon the future prospects of many a soldier; and I can testify, after 13 years' trial, to the benefits accruing from the separation and arrangements I suggest; as I consider it to have been one of the principal causes, under God, of the comparative immunity from crime and sickness enjoyed by my late regiment."

The authorities decided that the canteen and recreation rooms should be under one roof.

All, however, that I have since observed has deepened my conviction of the correctness of the opinion expressed in the above extract, that they should be quite distinct and removed the one from the other as far as practicable.

VI. Not sufficiently attractive.

I append a letter from the superintending schoolmaster, Mr. Stewart, on the subject of lectures and how attended.

D. Russell, Major-General,
Commanding South-eastern District.

Dover,
9th March 1870.

Enclosure accompanying Major-General Russell's answers.

Western Heights, Dover.
28th February 1870.

Sir,

In reference to the subject of lectures to the troops I have the honour to state that they are not generally appreciated; some subjects having special reference to military matters, such as Medals of the British Army, Victoria Cross Gallery, Overland Route, &c., may attract a tolerable audience; but the greater number of lectures, even with the addition of a little music and singing, are poorly attended. The audience generally consists of the married men, their wives and children.

The following are the numbers present at the lectures given to the regiments stationed at the Western Heights during the present lecture season. In the numbers given "adults" include men and women:—

Subject.	Number of Adults present.			Lecturers.
	1st. Bat. 4th.	97th.	91st.	
China and Chinese -	39	21	21	Schoolmaster Masterson.
Views in Scotland -	24	34	44	Rev. J. Millar.
Castles and Abbeys -	49	30	21	Schoolmaster Bacon.
Æsop's Fables - -	56	23	12	Rev. J. Hammond.

Scientific lectures often attract larger audiences; but there are few who come forward as lecturers.

On the other hand, readings, combined with music and singing, attract largely, notwithstanding the admission is by payment, whereas the lectures are free. At one of these entertainments recently given by the 91st Regiment the number present exceeded 350; and upwards of 300 attended one given last week by the 97th Regiment.

I have the honour to be, Sir,
Your most obedient servant,
J. Stewart,
Superintending Schoolmaster.

Lieutenant-Colonel Greaves,
Brigade Major,
Dover.

(vii.)—Answers received from Major-General Freeman Murray, commanding the Chatham District.

I. As regards soldiers of the line, I am of opinion that there would be no difficulty.

As regards the Royal Engineers, there is at present a compulsory course for recruits and a voluntary class in the evening; beyond this it would not, I think, be expedient to set aside any certain time daily for education, as, in the case of trained sappers, interference would thus be occasioned with their working at their trades.

With regard to the soldiers of the Royal Artillery, there would as a general rule be no difficulty, except in case of the men being required as working parties in re-arming works, &c.

II. It should commence, in my opinion, with recruits on their first joining their regiments, so that the recruit may at once get into the habit of considering some rudimentary education at any rate a necessary part of his military training; such compulsory attendance should not, and need not interfere with his drill.

As instruction drill beyond four hours daily cannot be very well carried out, an extra hour for schooling would not prove irksome.

III. I think it would not be advisable to make these certificates indispensable for promotion as regards non-commissioned officers in the line, because good men, capable of becoming efficient corporals, are to be met with who might fail in obtaining a third-class school certificate. As to serjeants, there are many of them whose services are valuable in that rank, but who would not be able to pass for a second-class certificate.

In the corps of Royal Engineers, sappers have to pass an examination before being promoted to the rank of lance-corporal, and all non-commissioned officers have to be examined by a special board before obtaining the rank of serjeant, under special regulations framed for the Royal Engineers.

As regards the Royal Artillery, it would in my opinion be advisable to make a second or third class certificate an indispensable qualification, except in some instances, such as promotion for gallant conduct in the field, &c.

IV. I see no particular objection, although I consider the present regimental position of schoolmasters sufficiently good to secure a satisfactory class of candidates. There might be some danger, if steps were taken to improve upon the present class of candidates, that they should ultimately become dissatisfied with the position of warrant officer.

V. The practical working and results of the present regulations for libraries and recreation rooms are satisfactory.

I think it would be a great improvement if a large room should be always attached to the recreation establishment for use as a theatre, lecture or concert room, and that certain light refreshments, such as tea, coffee, bread and butter, &c., should be obtainable at the recreation rooms. Such provision is made in connexion with the recreation rooms belonging to the Royal Engineers in the Brompton barracks; and in those for the troops of the line in Chatham barracks, this system is found to work very well.

I do not think that it would be advantageons to have the recreation rooms adjoining the canteens, if at the former place refreshments could be obtained as suggested above; still the canteen should not be so far off as to preclude men playing at bowls, skittles, &c. from obtaining a glass of beer.

VI. They answer fairly, but I consider that these lectures might be made more attractive. I have my doubts, however, as to the chance of increasing their utility in any great degree.

Freeman Murray, Major-General,
Commanding the Chatham District.

Chatham,
March 17, 1870.

(viii.)—Answers received from Major-General G. J. Carey, C.B., commanding the 2nd Infantry Brigade, Aldershot.

I. No.

II. Until dismissed drill.

III. Yes, in both cases.

IV. The present system ample, in my opinion.

V. The present system appears to work right well, and is a great boon to the men, especially in winter.

Separated on account of the noise.

VI. Simple lectures on campaigns, illustrated by plans and maps, and on other *military* subjects, bringing forward the acts of soldiers which have led to their advancement in life, would doubtless be received with much attention and good results.

G. J. Carey, Major-General.

Aldershot,
March 2, 1870.

Appendix I. (A.)

Army Schools, &c.

(ix.)—Answers received from Brevet-Colonel C. R. Egerton, Deputy Adjutant-General to the Forces.

I. I have always been opposed to a compulsory attendance at the regimental schools, by either drilled soldiers or recruits.

I have had practical experience both of the evils resulting from it, and the unsatisfactory results obtained therefrom.

Soldiers *ordered* to attend school look upon it for the most part as an extra parade imposed upon them, and an interference with their leisure hours. They do not go there in a frame of mind to profit by the instruction offered to them, and they, for the most part, idle through the time, and are a nuisance and hindrance to those who do wish to profit and improve.

I have known cases of insubordination, such as general coughing and shuffling of feet, arising from it.

You may order men to school, but you cannot make them profit by it.

I would place the pressure on in another direction, by requiring a certain standard of educational proficiency for each step of promotion, and by promoting, as a rule, only those who are found able to pass the required test.

Some exceptions must be admitted, as in cases of meritorious conduct and service, or of gallantry in the field, which it must be left to the discretion of the commanding officers to reward with promotion; but such cases should invariably be referred to in regimental orders as special cases.

Much also may be done by commanding officers interesting themselves in the school, and encouraging men to attend. Having the school at the hour of evening parade, on say two days of the week, and allowing those whose names are on the books to attend instead of parade has a good effect. I am satisfied better results will be obtained in the way I have pointed out than by compulsory attendance.

II. Should it be determined to introduce a system of compulsory attendance, it would be preferable to limit it to the recruits.

They would be more amenable and might be led to consider it part of their training as recruits.

They would be able also to attend more regularly than drilled soldiers, who are prevented by guards, pickets, orderly duties, &c., from attending.

III. Yes; I think, subject to occasional exceptions as referred to in a preceding answer, (see No. I.), the plan may be adopted generally with advantage to the service.

The following scale was adopted at my suggestion in the 89th regiment in 1851, and I believe is still acted up to; at any rate, it was for many years, and with great success and advantage to the regiment:—

"Linen Hall Barracks,
Dublin, 5th March 1851.

"1. Privates candidates for lance corporals:—Good reading and spelling, fair writing from dictation, and the first four rules in simple arithmetic."

"2. Lance corporals candidates for corporals:—The same as for lance corporals, but in a very much improved degree, good writing from dictation, and compound addition, subtraction, multiplication, and division."

"3. Corporals for lance serjeants:—To write well and correctly, both as regards spelling, grammar, and punctuation, and a good knowledge of arithmetic up to proportion."

"4. Lance serjeants for serjeants:—In addition to the above, a thorough knowledge of fractions, and to be able to keep correctly a company's accounts, and in all respects to be able to fulfil the duties of a pay serjeant to a company on detachment."

"Nos. 3 and 4, in addition, will be examined by the adjutant as to their knowledge of their duties in the field and quarters, in which they are expected to be proficient."

"5. Seniority on the list or simple absence from the defaulters' book, if unaccompanied by the required qualification, will not be considered as any claim to promotion."

The possession of a corresponding school certificate would have the same effect.

IV. I am opposed to such a measure.

The serjeant-major should be the highest grade in a regiment next to the officer.

In the interests of the regimental schools also I consider that it is not desirable to place the schoolmasters in a grade so far above those they have to teach.

It has been objected to the trained schoolmasters, that they are above their work, and cannot descend to the very rudimentary teaching that is requisite, but delegate it to the assistants, and that they keep aloof from the non-commissioned officers.

It is obvious how much, when this feeling exists, it must impair their influence and usefulness.

I have had experience of many valuable exceptions, and it is notable when they throw themselves into their work, and are cordial with the non-commissioned officers and men, and assist in their amusements, how much good they may do, and how certainly the school will be well attended.

V. I think the present regulations for the libraries and recreation rooms work very well, and I have no suggestions to make for their improvement.

When the canteen is a regimental one, I think it is an advantage on the ground of management to have the recreation room in the same building with it, but the tap-room should have a separate entrance and be entirely cut off from the recreation and refreshment rooms.

One committee of management, and one set of accounts, would with this arrangement suffice.

On the other hand, if kept distinct and in separate buildings, the machinery of two committees and sets of accounts would be required, and you would have two regimental establishments, in opposition to each other.

VI. I think the lectures I have heard have been, as a rule, too dry and scientific for soldiers.

I have found "readings," occasionally by officers, but as a rule by the non-commissioned officers and soldiers themselves, to be very popular, and it was surprising how much talent and humour as well as good taste was displayed by them.

The pieces to be read were always first approved by the committee.

C. R. Egerton, D.A.G.

Horse Guards, 26th March 1870.

(x.)—Answers received from Brevet-Colonel J. W. Armstrong, C.B., Deputy Adjutant-General, Ireland.

I. In the cavalry and other mounted corps there would be difficulty in setting aside a certain time daily. The infantry soldier has far more leisure at his disposal, and except in garrison towns, where the duties are severe, there is no reason why he should not attend school.

II. It should commence with the recruit, and not be deferred until after he has been dismissed from drill.

III. It is very desirable that candidates for promotion should possess the qualifications of second and third class certificates of education. I am not in favour, however, of making such qualifications indispensable, as experience has proved that some of the best and most efficient non-commissioned officers,—both in the field and in quarters,—have been very deficient in educational attainments. A non-commissioned officer, although an excellent clerk and a first-rate accountant, may yet be utterly incompetent either to drill, direct, or control the men placed under his charge.

IV. I would advise no alteration in the existing regulations.

V. I think the working and results of the present regulations for libraries and recreation rooms are satisfactory; but not having commanded a regiment for some time I am not in a position to offer any practical suggestions.

It would not be advantageous, as a general rule, to place the recreation room adjoining the canteen.

The canteen should not be made too attractive, lest the recreation room should suffer in popularity.

VI. Yes; so far as I know.

J. W. Armstrong,
Colonel, D.A.G.

(xi.)—Answers received from Colonel R. P. Radcliffe, commanding the Royal Artillery in Ireland.

I. I am not in favour of compulsory education with men of the usual age of soldiers, but would rather induce men by every means to take advantage of the opportunities that are offered them to improve themselves. Amongst other inducements I would excuse such duty men from afternoon parades as show themselves to be *really anxious for education* and allow them to go to school instead of parade. I mean by "men who show themselves to be "really anxious for education," such men who work hard when in school and not those who only go there to avoid parade.

II. If compulsory attendance were introduced I think it would be preferable that such attendance should be enforced on recruits rather than on duty men. It would be rather a relief than otherwise to the recruit who is sometimes rather overdrilled on first joining the army.

III. I think a third and second class certificate should be indispensable for promotion to the ranks of corporal and serjeant respectively, except in rare cases amongst the

cavalry and artillery, in which branches of the service the work is so continuous that but little time is afforded for school education. I enforce the above rule in my brigade though I give a loophole to a few *exceptionally good* non-commissioned officers who have not received the certificates required, but in these cases I call for a special report from the captains commanding their batteries to show in what way they are very superior to their brother non-commissioned officers of the same rank. I might remark that I think the examination papers for these certificates might with advantage be made less difficult.

IV. I think the schoolmasters generally are very efficient, that they are contented with their position, and might not perhaps be improved by making too much of them.

V. I consider the present working of the regulations for libraries and recreation rooms satisfactory. The great object to be attained is to make the rooms as comfortable and convenient as possible, and this comfort may be much increased by improving the warming and lighting (more especially the latter), of which most of the recreation rooms are very deficient. I do not recommend the recreation rooms being joined to the canteens.

VI. The lectures are generally good and instructive. They are very well attended, and are appreciated by the men.

R. Radcliffe,
Colonel, R.A.,
Commanding Royal Artillery in Ireland.

(xii.)—Answers received from Colonel A. T. Phillpotts, commanding Royal Horse Artillery, Woolwich.

I. I do not consider that there would be any difficulty in setting aside one hour per day for men belonging to the mounted branches of the service, under two years service, for four or five days in each week when not required for duty.

II. Recruits on first joining.

III. It would be advisable.

IV. I consider the present position of schoolmasters sufficiently good.

V. The results are satisfactory.

I consider it would be advantageous to have the recreation rooms adjoining the canteen.

VI. None are given in this garrison that I am aware of.

Woolwich, 14th March 1870. A. Phillpotts, Colonel.

(xiii.)—Answers received from Colonel J. Hall Smyth, C.B., commanding Royal Artillery, Aldershot.

I. I consider that to compel old soldiers to attend school would not only not be advantageous but would be detrimental to the service. The men would feel that they were treated as children; their passive resistance would irritate the schoolmasters and prevent them devoting much time to the willing scholars.

II. Every recruit should be compelled to attend school until he has obtained a third-class certificate, or until the commanding officer has satisfied himself that any further instruction is useless. Some schoolmasters complain that recruits at drill are often so fatigued and wearied that, however willing they may be to learn, they fall asleep. This, to a certain degree, might be prevented by commanding officers selecting the time for instruction and its duration, according to the season. For instance, recruits after riding, drill, or gymnasium exercise should not be expected to attend, particularly in summer.

III. No man should be promoted to the rank of non-commissioned officer who has not obtained a third-class certificate. A serjeant ought to possess a second-class one, and non-commissioned officers of the higher grades should have a first-class, modified to a certain extent.

IV. A schoolmaster of the first class ought to rank as a warrant officer, and those of the second class with serjeants-major. I do not consider that the present position of schoolmasters is sufficiently good for the attainments expected from them.

V. To attract numbers to libraries and recreation rooms amusements must be found; and that those who wish to improve themselves may be able to do so, means should be provided. I consider that the one great object gained is by the use of well-lighted cheerful rooms, with newspapers, light literature, games, and refreshments; the well-disposed soldier is kept away from public-houses and places of low entertainment, and the nearer these rooms are to those occupied by the men the better for the soldier and the State he serves. I have found even the gratuitous supply of writing paper leads to increased correspondence with distant relatives, and draws many subscribers.

If the canteen be near the barracks the recreation room might be under the same roof; but it should have a separate bar where light refreshments can be procured. When the canteen is some distance from the barracks (for instance, the Royal Artillery canteen at Aldershot, and the rooms occupied by the Royal Horse Artillery) a recreation room should be allowed in the barracks.

VI. Whether instructive lectures are of utility or not, depends greatly on the interest officers take in getting up entertainments which combine amusement as well. Then the attendance is always good; and whenever officers of superior attainments exert themselves for the instruction and amusement of the soldier, they have an attentive and grateful audience.

In conclusion, I would only add that it is useless to endeavour to force education on the soldier. All that can be done and all that is necessary is to convince him that it is for his own advantage to avail himself of the means within his reach. This conviction is becoming general, and as it becomes more so, we may reasonably hope that the improvement in the position of the British soldier that has been taking place for many years past may further raise him in the social scale.

J. H. Smyth,
Colonel on the Staff,
Commanding Royal Artillery, Aldershot.

(xiv.)—Answers received from Colonel G. T. Eaton, commanding 17th Brigade, Royal Artillery.

I. I consider there would be a difficulty in setting aside a certain time daily for *compulsory* school attendance of *duty* soldiers.

II. Recruits should be compelled to attend school for *one* hour daily, four days in the week during the period they are at drill, which in the 17th Brigade lasts eight to nine months.

III. I think it would be advisable, as a general rule, as soldiers would then find time and opportunity to give voluntary attendances until they qualified themselves for certificates.

IV. I would have no objection, in fact, would strongly recommend that the rank of warrant officers, contemplated so far back as 1857, be given to schoolmasters, after eight or ten years' service, provided they are recommended by their commanding officers.

I consider that the present position of the schoolmaster is not so good as it was; but, that if *chevrons* be abolished (especially in the case of those masters who, prior to 1863, were not required to wear them), and a step in rank given them as above, a much greater inducement would prevail than at present of securing a satisfactory class of candidates for the appointment.

V. The working and result of the present regulations are satisfactory, but the Government allowance of 2*l.* 10*s.* per quarter for four batteries is inadequate to cover the supply of new books, binding, and the wear and tear of the different games, &c.; the subscriptions are barely sufficient to pay the librarian, purchase periodicals, newspapers, &c.

VI. I have reason to be thoroughly satisfied with the endeavours made, in the brigade under my command, for these lectures to be both attractive and instructive; but I must admit, that, as a rule they are a failure. This is easily accounted for. Entertainments of readings and music, becoming pretty general now throughout the service, I believe have taken the place of magic lantern lectures; and they have proved beyond doubt that the soldier is going with the stream, that he will support that which is novel and varied, and that he gets tired of that which at the best is dry and monotonous.

I consider, therefore, that as the results are not commensurate with the expense, the magic lantern system should be abolished, and the money devoted to the purchase of school materials.

G. T. Eaton, Colonel,
Commanding 17th Brigade,
R.A.
Dover Castle,
5th March 1870.

(xv.)—Answers received from Brevet-Colonel C. Cameron Shute, C.B., commanding 4th Dragoon Guards.

I. There would be no difficulty whatever in the cavalry if there was a larger proportion of men to horses; but I would not have compulsory education for the old soldiers.

II. In cavalry I would make attendance at school compulsory for recruits from the day on which they are dismissed the riding school, and have then only field drill to learn.

III. I have for the last two or three years made these certificates indispensable to promotion. The rule has been strictly acted up to, and it has answered. I made one

exception in the case of an old soldier of Crimean distinction.

IV. I see many objections and no object. I think the prostitution of military rank, to evade increase of pay when serving, or to promote retirements (such as making colonels generals because they cease to be soldiers), a great error, and it has done much to make military rank less valued by soldiers, and to lower the position of the army socially and in general society.

The more the schoolmaster is on terms of equality with the regimental and troop serjeant-majors and serjeants, the more likely he is, by good tact and manner, to have a good voluntary adult attendance at his school.

The children of a regiment were never so well brought up as when a good serjeant was appointed schoolmaster by the colonel. I consider that a child's education is not a mere question of school hours; the children should constantly be under the eye, more or less, of the schoolmaster and schoolmistress, always obliged to be clean and tidy and well conducted. In both the regiments I have commanded the boys and girls have been clothed by the officers, each having an annual suit, for the care of which the schoolmaster and schoolmistress should be responsible; and this, during the six years I was adjutant of the 6th Dragoons, was never objected to; but the present schoolmasters and schoolmistresses, as a rule, are above anything but what is strictly scholastic.

V. The present regulations would work well, but that to not one barrack in 30 have buildings been added effectively to carry them out.

The best and most popular recreation room is a large well lighted and well ventilated fencing-room; it is always crammed in long winter evenings, and manly exercises are better worth encouraging among soldiers than bagatelle.

In the regiment which I command care and attention are always paid to make the recreation room a source of recreation and comfort to the men. Every year, when practicable, athletic sports are held, principally supported out of its fund, and arranged by its committee. During the winter months readings, concerts, entertainments, &c., are organized, and are found to conduce much to the amusement and recreation of the men in barracks.

The number of subscribers in the regiment is at present 287, the strength of the regiment being 487. Each man pays 3*d.* per month subscription, which includes the use *ad libitum* of stationery for letter writing. The room is open from 9 a.m. until 10 p.m.; it is, however, seldom frequented until after evening stables, a dragoon's duties leaving him little spare time before that hour.

VI. I do not think that the lectures are much cared for by the men.

C. C. SHUTE, Colonel,
Commanding 4th Dragoon Guards.

(xvi).—ANSWERS received from LIEUTENANT-COLONEL R. CLARKE, commanding 7th Dragoon Guards.

I. In cavalry regiments at Aldershot, during the drill season, it is scarcely possible to find time for dragoons to attend school. Their field days, and stable duties after, frequently lasting till four or five p.m. In the winter season, however, and at country stations, there is nothing to prevent their attendance between the hours of two and four p.m. *for four days a week.*

II. Recruits in cavalry regiments have as much work as they can possibly get through during the first 12 months they are in the service; but I would recommend their compulsory attendance during the whole of their second year's service, or until they had a satisfactory amount of rudimentary education.

III. No soldier should be promoted to corporal until he had obtained a third-class certificate of education; in like manner, corporals before being promoted to serjeant should be in possession of a second-class certificate. The only exception to this rule should be when it is desirable to promote non-commissioned officers and men for gallant conduct on active service.

IV. I do not understand the position of a warrant officer. If the non-commissioned officers are better educated, their society and the advantages of their mess, &c. would be quite good enough for a schoolmaster. If the schoolmasters are provided with better quarters at home, abroad, and on board ship, and relieved from showing their necessaries, and from wearing chevrons, they ought to be satisfied.

V. The reading and recreation rooms are very popular with the well-conducted men, and I have every reason to believe will become more so. A greater variety of games is desirable. The recreation room should not be near the canteen.

VI. I have never heard a schoolmaster lecture, and cannot give an opinion. I do not think that lectures are cared for by soldiers.

ROBERT CLARKE, Lieut.-Colonel,
Aldershot, Commanding 7th Dragoon Guards.
15th March 1870.

(xvii.)—ANSWERS received from LIEUTENANT-COLONEL A. NUGENT, commanding Scots Greys.

I. I am of opinion that soldiers should attend school as a duty until able to read from a book of easy narratives, to write an easy passage from the same from dictation, and in arithmetic to work simple multiplication; and I see no difficulty in setting aside, say, one hour and a half daily for this purpose for the men not on duty.

II. A number of the recruits would be able on joining to pass the necessary examination; but to give the others an opportunity of acquiring voluntarily the amount of education necessary to enable them to pass, I would recommend that the attendance of any of them should not be made compulsory until they had been six months joined.

This also on account of a recruit (in the cavalry particularly) having quite sufficient on his hands on first joining.

III. I think any man who either through indolence, false pride, or inherent dullness fails to acquire a certificate of education, in proportion to the rank to which he aspires, should be held to be ineligible for promotion.

The following Regimental Order was published in the Scots Greys on the 17th April 1868, and having been adhered to has been found to work very satisfactorily, viz.:—

"In accordance with the Queen's Regulations the commanding officer has approved of the following qualifications for promotion," viz.:—

"*From private to lance-corporal.*"

"To read the second school book, to write an easy passage from the same (from dictation), and in arithmetic to work simple multiplication."

"*From lance-corporal to corporal.*—3rd class certificate.
„ *corporal to serjeant.* —2nd „
„ *serjeant to higher rank.* —1st „

"An examination of candidates for certificates will take place once a quarter. The names of non-commissioned officers and men holding certificates will be entered in a book kept for the purpose."

IV. Giving a schoolmaster the rank of warrant officer would not afford any stimulus to exertion in the performance of his duty, unless some other condition was annexed than simply length of service.

I think that the prospect of attaining to a higher rank would have the effect of securing a superior class of canditates than could be had without it; at the same time, the duties of regimental schoolmaster ought to be efficiently performed by a person holding the rank of 1st class staff-serjeant, *i.e.*, equivalent rank to that of regimental serjeant-major.

V. The present regulations for libraries and recreation rooms, as observed by me, work very well practically. It would be an advantage to have the latter adjacent to the canteen, but I would recommend that sufficient accommodation be provided to enable these branches to be kept quite distinct, and to ensure for the recreation room that freedom from the noise, &c., inseparable from a canteen which is necessary in a room used for reading and writing.

I would also recommend that an increased number of bagatelle tables, and those of a good size, be provided, this amusement having been found to be a great attraction.

VI. In general the subjects selected for lectures to the troops are not such as possess any interest for the class for which they are intended.

I consider that the magic lantern might occasionally give place with advantage to a system of penny readings.

A. NUGENT,
Dublin, Lieut.-Col. Scots Greys.
26th February 1870.

(xviii.)—ANSWERS received from LIEUT.-COLONEL THE HON. I. DE V. FIENNES, commanding 9th Lancers.

I. There would be no difficulty, I think, in setting apart a certain time daily, and making attendance at school compulsory for soldiers who have not made satisfactory progress in rudimentary education.

II. I am of opinion that it would be better, in the Cavalry at any rate, that a recruit should not commence his attendance at school until he is dismissed his drills.

I would, however, have a voluntary class for those who might be disposed to attend.

III. I think it would be very advisable in the case of Corporals and serjeants that they should receive a certificate of education before obtaining promotion to their respective ranks.

IV. I see no objection to giving schoolmasters the rank of warrant officers after a certain length of service.

V. The libraries and recreation rooms, I think, work very well, and are a great boon to the men.

As a general rule, it seems to me advantageous that the canteen should be near the recreation room; where this is not the case, there should be a bar adjoining the recreation room where the men can obtain coffee and light refreshments.

In my own experience at Newbridge, where the canteen was somewhat distant, a refreshment bar was opened in the recreation room, and proved very successful.

VI. I am, on the whole, very well satisfied with the present system of lectures; to be attractive, they must be amusing and not too lengthy.

Ivo de Vesci Fiennes, Lieut.-Col.,
Commanding 9th Lancers.

(xix.)—Answers received from Brevet-Colonel V. Baker, commanding 10th Hussars.

I. No difficulty in the infantry, nor for a certain number of days in the week in the cavalry. I am a strong advocate for compulsory education in the army.

II. Certainly with recruits on joining.

III. Yes, except in special cases.

IV. I think the present position of schoolmasters sufficiently good.

V. The recreation rooms are rarely large enough, and might be made more comfortable. I should like to see the recreation room arranged as a theatre or lecture room, so that it might be used for those purposes, and every reasonable amusement afforded to the men.

I see no advantage in placing it next the canteen, and possible disadvantages.

VI. The system of lectures is good, but the lecturers are not often very competent.

V. Baker, Colonel,
10th Hussars.

(xx.)—Answers received from Brevet-Colonel Oakes, C.B., commanding 12th Lancers.

I. During the summer it would be impossible to find time for the men to attend regularly. Might be done in winter.

II. Preferable that attendance commence with recruits on first joining their regiments. Agreeable to Regimental Orders, all recruits in the 12th Lancers are obliged to attend school; until dismissed their drill they attend about four hours a week.

III. I think it would be advisable to make a third-class certificate of education an indispensable qualification for promotion to the rank of full corporal, and a second-class certificate for promotion to the rank of serjeant.

IV. I think it would be objectionable, and a disadvantage to the service to give regimental schoolmasters any higher rank than they have at present.

V. The practical working and results of the present regulations for libraries and recreation rooms are good, and very satisfactory.

No; I consider it would be a disadvantage to have them very near each other.

VI. Yes; I recommend lectures being more frequently given.

T. Oakes, Colonel,
Commanding 12th Lancers.

(xxi.)—Answers received from Brevet-Colonel Soame G. Jenyns, C.B., commanding 13th Hussars.

I. I think there would be great difficulty in a *cavalry* regiment in adopting the plan suggested. A cavalry soldier has so very little time to himself that compulsory attendance at school would make men discontented; but I think the attendance of recruits on *joining should* be compulsory. I have always compelled men who cannot read and write fairly to attend on joining the regiment under my command.

There are 62 recruits now attending school in the regiment under my command; of these eight cannot read or write. After they are dismissed drills I do not make school attendance compulsory.

I find that men who are thus compelled to learn something, constantly attend an evening voluntary class in the winter till they can read and write fairly.

II. Certainly on joining as recruits. I know that men had rather get over their drills and school attendance at *the same time*, so as to be able to look forward to lighter work when dismissed.

III. Yes, decidedly, *except always* in the case of special efficiency on points of drill or duty; and I think a commanding officer should not be tied down as to his choice of men for promotion in particular instances.

IV. I think it would be a very good regulation in thoroughly deserving cases.

I think schoolmasters should have a chance of promotion as well as other non-commissioned officers.

V. I think the present system works *very well indeed*, and it is a great source of comfort to the men.

I would suggest three rooms instead of two, occupying the same space; one room, a small one, being entirely given up to *writing*.

Certainly not adjoining the canteen. Quiet and steady men reading or writing would be annoyed by men who had perhaps been drinking too much at the canteen going in and out and making a noise.

VI. The system of lectures works well, and I think they are sufficiently attractive.

I think it would be a great boon to the men, particularly in the cavalry, if gas or lights were allowed to be kept burning in the library and recreation rooms an hour longer. I have tried the experiment and never found the indulgence abused; the roll being called in the reading room after it had been called in the troop rooms.

Soame G. Jenyns,
York Barracks, Colonel, 13th Hussars.
10th March 1870.

(xxii.)—Answers received from Brevet-Colonel E. B. Cureton, Commandant of the Cavalry Depôt, Canterbury.

I. I think every soldier should be compelled to attend school, and to learn to read and write, but I am of opinion the time should not be taken from his recreation hours.

II. I am of opinion that in the cavalry the attendance might commence on the recruit's first joining, and that the most suitable time would be the evening stable hour, as the recruit will gain knowledge of his stable duties at morning and mid-day stables.

III. I am of opinion that it should be left to the discretion of the commanding officer, who would take care not to promote men deficient in education.

IV. I am of opinion that the present regimental position of schoolmasters is good, and should secure a satisfactory class of candidates.

V. I think the regulations for libraries and recreation room work very well; these rooms are very popular and much frequented by the men; the only complaint at this station is, that the recreation rooms are far too small. Out of a total strength of 972 non-commissioned officers and men, there are 774 subscribers.

I think it would be a disadvantage to place the recreation room too near to the canteen.

(The accommodation of canteens might be much improved.)

VI. I do not consider the present system of lectures is attractive, and they draw but small numbers. I think if, with a lecture, they had some musical entertainment, instrumental and vocal, they would be popular among the men, and a considerable number would attend; I am of opinion that such entertainments would be very beneficial in keeping soldiers in barracks during long winter evenings.

E. B. Cureton, Colonel,
Canterbury, Comdt. Cavalry Depôt.
2nd March 1870.

(xxiii.)—Answers received from Brevet-Colonel C. W. Randolph, commanding 3rd Battalion Grenadier Guards.

I. There would be no difficulty in setting aside a certain time in the *afternoon*. Should a man, however, be under punishment, it might interfere slightly with that.

II. It is my opinion that compulsory attendance should commence with recruits first joining. This has been carried out for many years in this battalion, and has answered well.

III. This is exactly what is carried out in this battalion, and I consider it most essential.

IV. I consider the present regimental position of schoolmasters sufficiently good.

V. The present regulations relative to libraries and recreation rooms work well.

I think it advantageous to place the recreation room adjoining, though still separate from, the canteen.

VI. This entirely depends upon the ability, or rather aptitude, of the schoolmaster to make these lectures attractive. In this battalion the lecturer possesses the power of amusing.

C. W. RANDOLPH,
Captain and Colonel,
Commanding 3rd Battalion Grenadier Guards.

Windsor,
24th February 1870.

(xxiv.)—ANSWERS received from MAJOR and BREVET-COLONEL W. G. CAMERON, C.B., commanding 1st Battalion 4th Regiment.

I. I would decidedly make the attendance compulsory as described.

It is the only means of securing continuous daily attendance at the school, without which but little progress is made by the soldier, and the public gets but a poor return for its heavy outlay on the educational establishment of the army.

In this regiment the attendance of soldiers, not on duty, has always been compulsory up to five years' service, unless previously dismissed by the schoolmaster as able to read and write fairly, and possessing a sufficient knowledge of arithmetic.

But I found some time since, that any duty during the day is frequently made an excuse for non-attendance, and the men are now ordered to attend in all cases, when not actually employed on duty during school hours, and are marched to school by a non-commissioned officer, and the rolls checked by the serjeant-major.

Parades and other duties should be so arranged, that, except when on guard, the soldier can rarely claim exemption from attendance at the compulsory class.

They should also be given tasks to prepare in their quarters to a much greater extent than is now the case, and be thus kept usefully employed during much of their idle time now spent in dissipation.

When once a man has put his name down for the special class (which is chiefly for the instruction of candidates for promotion) attendance should likewise be compulsory.

The evening class should be quite voluntary.

II. I think, that the compulsory attendance of recruits should commence from the time they join and before they have got into bad and idle habits; their drill and attendance at the gymnasium can be so arranged as not to interfere with their attendance at school.

III. Most decidedly; as I found some months ago, and gave orders to that effect, which have been attended with the best results.

It is, however, nearly as difficult for our men to obtain third-class certificates at home as second-class ones in India, and I would recommend that one uniform system be enforced at home and abroad.

One of the chief obstacles in teaching the men properly is the difficulty in obtaining good school assistants, and something should be done in this direction.

I think there should be a qualified serjeant selected in every regiment to assist the schoolmaster in instructing, and to enforce that good order, discipline, and attention at the school, which from his habits of command, he is better able to do than the schoolmaster.

Sixpence a day in addition to his pay would be sufficient remuneration.

He should be one of the effective serjeants of the regiment, to be relieved every year; a serjeant withdrawn permanently from duty is apt to lose much of his authority over the men.

One of his duties would be to march the compulsory class to school and see that there are no absentees.

IV. I see no regimental objection to giving schoolmasters the rank of warrant officers after a certain length of service, and in raising their rank it is very likely that a better class of candidates may be secured for the appointment.

V. From my experience at home and in India, I am of opinion that the establishment of libraries and recreation rooms has had a most beneficial effect.

In India they and the workshops are invaluable as a means of recreation and useful occupation, without which the soldier's life is unbearable when confined to barracks during the heat of the day.

As a sanitary measure they are also important in hot climates, where (as I found at Aden during two years residence) the best preservative of health was to keep the soldiers' minds and bodies actively employed and not allow them to sleep away half their time and get into a lethargic state; bad for their livers and digestion.

Our recreation room and library at Dover are nearly always full in the daytime and evening, and form a great attraction to the respectable soldiers.

I think we should not be too impatient of results; it will be a long time perhaps before they are fully apparent in the improved moral tone of the army.

But I am sure, that not only is there a great improvement gradually going on, but that these institutions, which afford a pleasant retreat to the respectable soldier from his noisy and comfortless barrack-room, will be partly the means of inducing a better class of men to enlist.

They cannot be expected to have any great beneficial influence on the confirmed drunkard, who has been addicted for years to intemperance and debauchery; their influence and that of our excellent schools will be chiefly felt by the young soldiers, who it is to be hoped will grow up with very different habits.

I have not had sufficient time to prepare a full report on the questions submitted to me, and can think of hardly any suggestions at present regarding the management of libraries and recreation rooms.

The present regulations are sufficient to ensure the success of the institution provided a proper interest is taken by the commanding officers of the regiments, and an officer in each corps is selected to superintend, who will take a pride in his office.

I would suggest that there should be small libraries at each hospital, branches of the garrison library, and in charge of the surgeon.

Under existing regulations, patients in hospital are seldom well supplied with books and papers.

Complaints have been made, that the charges for damage done to very old books are so heavy, that the men are afraid to take books away from the library.

I think some instructions might be given limiting these charges.

I consider that it is decidedly disadvantageous to place the recreation room adjoining to the canteen, so that the men can pass in and out from one establishment to the other.

This is by no means conducive to the comfort of the quiet men who frequent the library and recreation room.

VI. As far as I have seen, the lectures are not of that amusing character which attracts soldiers; but the recreation rooms are used for penny readings and glee singing, and other entertainments, which are very popular with the men.

I cannot see that any further assistance is required from Government; every regiment has now ample means of affording the men every sort of amusement in the recreation room.

In large garrisons the regiments vie with each other in getting up these entertainments, as here at Dover, and the attendance of the men is so large that there is hardly room for them.

W. G. CAMERON,
Colonel, Commanding 1st Battalion
4th (King's Own) Regiment.

Dover,
9th March 1870.

(xxv.)—ANSWERS received from BREVET-COLONEL A. C. ROBERTSON, Lieut.-Colonel, commanding 2nd Battalion 8th (the King's) Regiment.

I. I think there would be no difficulty in organizing a system of military training in which compulsory school attendance should form part of the daily routine of the instruction of all non-commissioned officers and privates, by whom the teaching of the schoolmaster was required and for whom it was likely to prove beneficial.

In organizing such a system of training the hours of instruction should be prescribed by a general or district order, but the manner of employing them left mainly to the discretion of officers commanding battalions. Subject to certain general regulations, and under the immediate control of the general commanding the brigade or district, officers commanding battalions should be permitted to vary the soldier's employment so as to adapt his daily routine of instruction to the climate of the place where he was serving, to the season of the year, and to his special defects and individual requirements.

At home, during the summer months, setting up drill, running drill, and gymnastic exercises might be practised for an hour before breakfast.

Two of the forenoon hours might be devoted to battalion

light infantry drill, and for two hours in the afternoon the battalion might be broken up into squads, to each of which such special exercises might be assigned as were considered most suitable for the soldiers composing it.

While, for instance, awkward, stupid, and careless men were employed during these afternoon hours in practising the manual and platoon or bayonet exercises, and while 3rd class shots received extra instruction in position drill, young non-commissioned officers and smart well-conducted privates, if imperfectly educated, might be ordered to attend school.

Throughout the winter months one or two drills a week would suffice for a non-commissioned officer or a smart private, and, if thought advisable, all the remainder of the prescribed training hours might be spent in school by men of this class.

Private soldiers, when perfect in their drills and exercises, and non-commissioned officers after obtaining second-class school certificates, might during the greater part of the year be exempt from attending parade or school in the afternoon.

II. I think school attendance should commence as soon as the recruit joins, and should be compulsory on every recruit until dismissed from drill.

During this period, there being no interruptions from guards and duties, school attendance is continuous, and the schoolmaster has ample opportunities afforded him to judge of the recruit's aptitude for learning.

After the termination of this probationary period I see no advantage, either to the public service or to the individual soldier, in enforcing school attendance on men of vicious dispositions and dissolute habits, or on the hopelessly stupid, or on the incorrigibly idle.

A certain amount of elementary education is a necessity for an efficient non-commissioned officer, and when defective the public interest clearly requires that the necessary training to remedy the defect should be enforced.

As regards private soldiers, the education of those only is a matter of public interest who are intelligent and well-conducted. A commanding officer ought therefore to be allowed to exercise his discretion in selecting for compulsory education those only whom he considers likely to repay the trouble and time spent in their instruction.

The stupid, the idle, and the vicious should be permitted, and might even be encouraged to attend school. But I cannot see that any advantage either to themselves or to their regiments is likely to result from enforcing the attendance of such men. To do so would only overcrowd the classes, waste the time of the schoolmaster, and impede the progress of those soldiers who are likely to benefit from school attendance.

III. I think it would be extremely desirable to make a third-class certificate an indispensable qualification for promotion to the rank of corporal, and a second-class certificate for promotion to the rank of serjeant.

In fact, it appears to me that, until our system of training admits of the application of this rule, our regimental organization, as regards the guarantee it affords for the efficiency of non-commissioned officers, cannot be considered to be in a satisfactory state.

It will be seen by reference to the annexed return that in the battalion now under my command, during a period of nearly four years, I have found it practicable to act on the proposed rule. (Vide Enclosure "A.")

Under the present system of purely voluntary school attendance the supply of men who are both well educated and well conducted is however so exceedingly precarious, that I do not think it would be advisable to make a school certificate absolutely essential to render a soldier eligible for promotion, unless discretionary power were also given to commanding officers to enforce school attendance as part of the regular routine of military training. The judicious exercise of this power would, I have no doubt, suffice, without any other provision, under all circumstances to render it practicable to obtain a sufficient number of well-educated and well-conducted privates to supply all vacancies in the non-commissioned officers' ranks of the army. If, however, it be considered desirable so to stimulate exertion as to obtain educational results proportionate to the quality and quantity of the instruction given, then I think it quite essential that proficiency in school work should be awarded by premiums.

Referring to G.O. 46, 1869, clause 14, which states:

"The amount accruing from fines will be formed into a general fund to be applied under the direction of the Secretary of State for War to objects tending to the benefit of the soldiers of the army generally."

It appears to me that no better way could be devised for applying this fund, than to expend the money accruing from fines in rewarding, and thereby promoting, the educational acquirements of non-commissioned officers by grants of extra rates of pay.

What I suggest is:—

1st. That all serjeants, corporals, and lance-corporals who possess first-class school certificates should receive 3*d.* per diem.

2nd. That all corporals and lance-corporals who possess second-class school certificates should receive 2*d.* per diem.

3rd. That all lance-corporals who possess third-class school certificates should receive 1*d.* per diem.

A return marked "B" is appended, by which it will be seen that in the actually existing state of education among the non-commissioned officers and lance-corporals of the battalion under my command the expense of carrying out this scheme would be 6*l.* 17*s.* 6*d.* per month, and that the monthly average of fines for drunkenness from 1st May to 31st December 1869, was 8*l.* 3*s.* 5*d.*

If the suggested rates of extra pay were granted, and if commanding officers were invested with power to enforce school attendance, there would no doubt be a very great increase in the number of non-commissioned officers holding the higher classes of school certificate; but as soon as it was found that the expenditure for premiums exceeded the income from fines, the expenditure could be easily diminished by raising the qualifying standard for first and second class certificates.

By restricting the premiums to non-commissioned officers and lance-corporals, none but men of good character whose attainments could be made available for the public service would receive rewards. This obviates an objection, which I have heard made to proposals for giving premiums for school work, that good scholars are not unfrequently very bad characters and worthless soldiers.

Two returns marked "C" and "D" are appended, which may be interesting to the Commissioners as showing the educational results obtained under the present voluntary system in a class composed of men specially selected for intelligence and good conduct.

The progress recorded does not seem to me to indicate that there is much effort made on the part of the learners. It will be observed that the few who obtained second-class certificates are classified on joining the class as having already reached a high standard of attainment.

IV. I am not aware of any objection to giving schoolmasters, after a certain term of service, the rank of warrant officers, but I do not consider myself competent to offer any opinion as to the conditions of service necessary to attract suitable candidates for this appointment.

The attainments of those schoolmasters with whom I have served seemed to me quite sufficient for the satisfactory performance of their duties, and their conduct has been such as became their position.

V. I think the present regulations work well and produce good results.

I think that at all barracks usually occupied by the headquarters of a regiment, a stage and other requisites for dramatic performances should be constructed, and I think the expense of this improvement might be admitted as a charge out of canteen profits, a certain proportion of the expenditure being levied from each regiment that occupied the quarters. This addition to recreation rooms, if planned by the engineers, would be very economically executed by the troops themselves.

There is a large class of soldiers who frequent both the canteen and the recreation room, and no doubt it is a convenience to these men when the canteen adjoins the recreation room. If the effect of this convenience were to induce these men to spend less time in the canteen and more in the recreation room, I would consider this an advantage; if the effect were the reverse, I would consider it a disadvantage. I have no experience or other means of forming an opinion which effect would be most likely to be produced. If no change either way were produced in the habits of the soldier (which I am inclined to think would in most instances be the case), then as the increased convenience would be attended by no disadvantage, I should say that whenever practicable the best arrangement would be to have the two establishments adjoining one another, care being always taken to preserve sufficient distance between them to prevent the noise of the canteen causing annoyance to the occupants of the reading, writing, and recreation rooms.

VI. The utility and attractions of a lecture altogether depend on the ability and tact of the lecturer. I do not know any way in which the services of lecturers, eminently endowed with these qualities, can be more frequently secured than they now are.

Generally speaking, lectures do not excite much interest among soldiers. Entertainments in which reading, recitation, and singing are combined are better liked; dramatic representations are still more popular, and are the amusement which soldiers like best. The superior interest they feel in theatricals is manifested by soldiers resorting to them in greater numbers than to lectures or readings, and by

Appendix I. (A.)

Army Schools, &c.

their being ready to pay for admission to the former, but not to either of the latter.

A. Cunningham Robertson,
Colonel and Lieut.-Colonel, Commanding
2nd Battn., 8th (the King's) Regt.

Bury, 5th March 1870.

Enclosures accompanying Colonel Robertson's answers.

Enclosure A.

Return of number of promotions to the rank of Serjeant and Corporal in the 2nd Battalion, 8th "The King's" regiment, from 3rd May 1866 to 4th March 1870, showing the class of School Certificates possessed by each of the Non-commissioned officers promoted.

Class of School Certificate.	Number of each class promoted. To Serjeant.	To Corporal.	Remarks.
1st Class -	2	3	N.B. — The five corporals promoted without certificates are thus accounted for :— 1st. A Lance-corporal appointed Master Shoemaker and afterwards promoted. 2nd. A reduced Colour-Serjeant re-promoted. 3rd. An orderly-room assistant, well educated, promoted under promise of passing the prescribed examination, but which promise has not yet been fulfilled. 4th. A pioneer to corporal of pioneers. 5th. A drummer who after long service as a lance-corporal was promoted to corporal.
2nd Class -	8	18	
3rd Class -	„	30	
No Certificate	„	5	
Total number promoted -	10	56	

Annexed is a copy of a regimental Memorandum issued on 18th September 1866, and which has been acted on since that time.

Memo. for Officers Commanding Companies.

1. Officers Commanding Companies will explain to the corporals and lance-corporals belonging to their companies, that in filling up vacancies in the establishment of non-commissioned officers, if there be two or more men whose qualifications in respect of conduct and efficient performance of duty are nearly equal, the Commanding Officer will generally select for promotion the man who has the best School Certificate, without reference to his seniority in the roll of non-commissioned officers.

By order.
(Signed) J. P. Jones,
Lieut. and Adjutant,
2 Batt., 8th "The King's" Regiment.

Malta, 18th Sept. 1866.

Enclosure B.

Return showing the number of School Certificates in possession of Non-commissioned officers and Lance-Corporals of the 2nd Battalion, 8th "The King's" regiment, together with estimate of monthly cost of allowing holders of certificates specified daily rates of extra pay.

xxvi.)—ANSWERS received from LIEUT.-COLONEL the HON. S. MOSTYN, commanding 2nd Battalion 23rd Royal Welsh Fusiliers.

I. I think it would be difficult to set aside an hour at which the attendance *daily* of every man on duty could be made compulsory. I also am of opinion that such compulsory attendance would be very unpopular among trained soldiers and in every way undesirable.

II. I see no objection to compulsory attendance for one hour daily in the case of recruits, provided their knowledge of reading and writing was such as to make such attendance desirable.

III. I think any arrangement of this sort would interfere with the commanding officer's prerogative in the matter of selection, and that any such interference would be prejudicial to the ends of discipline.

IV. I do. I think the present position of the schoolmaster quite good enough.

V. The recreation room system, according to my experience, works admirably; the only drawbacks that I am aware of have arisen from a want of liberality in the issue of fuel and light, the supply of which is sometimes insufficient for comfort. With regard to libraries, I am of opinion that regimental libraries would be more popular with the men, and that the extra expense of that system would be very trifling. With regard to recreation rooms, I think it very undesirable that they should be placed anywhere near the canteen.

VI. I am not satisfied with the present system of lectures to the troops, the result of my inquiries being to prove to me that they are dull and unattractive.

S. MOSTYN, Lieut.-Col.,
Commanding 2nd Battalion
12th March 1870. 23rd Royal Welsh Fusiliers.

(xxvii.)—ANSWERS received from BREVET-COLONEL J. C. MCLEOD, commanding 42nd Royal Highlanders.

I. There would be no difficulty.

II. Attendance at school should be deferred until after the recruit has been dismissed drill.

III. Notwithstanding the advantage of having a well-instructed body of non-commissioned officers, it would be inadvisable to make any certificate of education an indispensable qualification for promotion.

IV. Since the door of promotion has been virtually closed to the combatant, there are objections to opening it to the non-combatant; however, the present regimental position of schoolmasters is sufficiently good.

V. The practical working of these institutions is good, and their results are beneficial. Still the regimental library, which was established in the 42nd forty years ago, and was maintained until the regiment was ordered home from India in 1867, gave greater satisfaction to subscribers, a more ready access to the books desired, and a better description of book, than the present regulations for libraries affords. The inconveniences of its transport was overbalanced by the advantages it offered.

The regulations for recreation rooms are very good.

The canteen should contain within itself little diversions for the men, but the recreation room should not adjoin the canteen.

VI. The present system of lectures is unsatisfactory, but I cannot suggest anything that would increase their popularity.

J. C. MCLEOD, Colonel,
Lieut.-Colonel Commanding
Aldershot, 42nd Royal Highlanders.
25th February 1870.

(xxviii.)—ANSWERS received from BREVET-COLONEL R. B. HAWLEY, commanding 4th Battalion 60th Rifles.

I. I am averse to making it compulsory on soldiers to attend school.

II. An adult being taken into the service to protect the country, first let him be taught how to carry out what he is engaged for.

III. I am opposed to any school certificate being obligatory on commanding officers in selecting non-commissioned officers.

What you require in non-commissioned officers is temper and determination, such qualifications colonels look for; only a very elementary education is required to back these gifts to form the best non-commissioned officers. Such elementary education the present special school classes afford, *but* these special classes should be carried on in the *summer afternoons* as well as in the winter months.

The order issued year by year in the 4th battalion 60th Rifles, regarding men for special school classes, is attached.

IV. The schoolmaster of the 4th battalion 60th Rifles I would gladly see promoted to the rank of warrant officer. I am in favour of rewarding the class generally by ready promotion to warrant rank.

V. I find the present regulations for libraries, &c. work well. The reading rooms are constantly full. The more

homely and comfortable these rooms are made in furniture and fittings the more they draw.

The refreshment. bagatelle (or billiard), and reading rooms should be under the same roof as the canteen (though still separate). If a man sees a comfortable tea room on his way to the tap room of the canteen, he very likely will enter the former and forget the last.

If the period of enlistment becomes shorter, it will be more *necessary than ever* to look to the good management of the reading room, &c. (Of 125 of the youngest soldiers lately drafted out of the battalion, but nine did not subscribe to the reading room.)

VI. The lectures the men don't care much for. Theatricals they do like (the battalion *built* two theatres in Canada), and such entertainments as in the printed bill sent herewith.

To every canteen there should be *attached* a skittle alley, it is no use unless it is *at the canteen.*

These (skittle alleys) I also built in Canada, but then I was trusted with spending the profits from the canteens.

R. B. HAWLEY,
Colonel, 4th battalion 60th Rifles.

Aldershot,
4th March 1870.

Enclosure to Colonel Hawley's Answers.

STANDING ORDER, 4th BATTALION 60th RIFLES.

"Officers commanding companies will recommend, by office "hour to-morrow, four men per company for the special school "class.

"The commanding officer wishes these men to be good march- "ers, good shots, and men of such general intelligence that they "will be likely to make good non-commissioned officers. Men "at present not being able to read or write are not to be excluded "from the benefit of the class, provided they come up to the "qualification named above."

Mem.—This order has been in use many years.

R. B. H., Colonel.

(xxix.)—ANSWERS received from LIEUT.-COLONEL J. SPROT, commanding 91st Highlanders.

I. Little or no good would in my opinion arise from *compelling* soldiers over 20 years of age, who do not possess a satisfactory amount of rudimentary education, to attend school; it would be very distasteful to and hard upon them.

If men were compelled to attend, the best hours would be from 5 to 7 p.m.

I am about to commence an experiment to induce men to attend. There are in the week five afternoon parades; two "full attendance," under the commanding officer or adjutant, is enough in most regiments. I would allow it to be optional with the men to attend the remaining three, or go to school from 2 to 3.30, but would oblige them to decide on the first of each month between school and parades for that month.

II. The compulsory attendance at school of recruits should certainly be deferred until after they have completed their drill and rifle instruction; after that they should be *compelled* to attend for 12 months, or until they take third-class certificates. The hours I would recommend would be from 5 to 7 on Mondays, Tuesdays, Thursdays, and Fridays, but not oftener. This would also have the advantage of giving them less time to idle and drink in the towns of evenings.

III. At the time I assumed command of the 91st Highlanders, on the 12th November 1869, an order was issued that a third-class certificate for promotion to corporal, a second to sergeant, and a first to colour-sergeant would be necessary. This has greatly stimulated the men and non-commissioned officers to educate themselves.

But the test, as it now stands, is too severe to be of much practical use. I had to give up asking for the first class, and fear I shall have to do the same with the second, in which case I purpose to issue certificates of my own.*

I would not recommend a certificate being *indispensable* to promotion, but the proportion of promotions with and without certificates would in a great measure depend on the strictness of the examination, and the state of education in the corps.

IV. I am not at present prepared to answer this question.

V. The advantage of a recreation room depends exactly on its proximity to the men's barracks.

It has not, in my opinion, any connexion with the canteen. Efforts have been made to sell cakes and coffee in these reading rooms, but never with much success. When the recreation room of my regiment was at the South Front, 470 yards off, there were 197 subscribers; it is now in the barracks, attached to the canteen, and there are 300 subscribers. Coffee and biscuits can be passed in through a window, and are always ready but never called for. The most used recreation room I ever saw was the "Soldiers' Institute," at Chatham, in the barracks; the least used the "Guards' Institute" in London, a mile from the barracks.

Were I allowed to propose I would suggest that all new recreation rooms be built in or as near to the barracks as possible; that the room be capable of holding 300 to 400 persons; that the ceiling be made on good acoustic principles; that a stage be erected at one end; that the room be divided by folding doors into school room, reading room, and game room, and that the screens be so arranged that talking in one room be not overheard in another, and that when necessary they can be folded back to form one large hall for concerts, theatricals, or lectures.

VI. Here lectures are scarcely at all attended; but is it likely that men will leave a warm room and walk half a mile and back across a wet plain to hear a dull lecture in a cold church?

J. SPROT,
Lieut.-Colonel Commanding
91st Highlanders.

Dover,
5th March 1870.

* Since writing the above I have had to give up asking for the second-class certificate. March 22, 1870.

(xxx.)—ANSWERS received from BREVET-COLONEL E. T. GLOSTER, commanding 97th Regiment.

I. It all depends on where a regiment is quartered. In a regiment situated as the 97th regiment is at present the thing would be simply out of the question, as between guards, working parties, gymnasiums, &c., the commanding officer never sees the regiment from one half-yearly inspection to another, and as a rule hardly gets men enough to form a company on parade. I am adverse to compulsory education.

II. The recruits of the 97th regiment attend school compulsorily. I think it would be preferable, if compulsory education is introduced, that men should be compelled to attend while recruits; once duty men you never see them.

III. No. I do not think the best educated men make the best corporals or sergeants, added to which I fear that promotion would come to a dead lock were such qualification made indispensable. A scale of educational requirements, as attached, is required from men seeking to be non-commissioned officers in the 97th regiment; and even with these slight qualifications fault has been repeatedly found with the extreme youth of the non-commissioned officers of the 97th regiment; old soldiers do not come forward for promotion.

IV. I think it would be most unadvisable to put any non-commissioned officer over the head of the sergeant-major. If schoolmasters are to be made warrant officers why not bandmasters, who hold a most respectable and responsible position and are now junior to the sergeant-major?

V. I do not think that the present supply of the various games provided by Government is sufficient. We have always had to expend money in supplementing the Government allowance. The canteen and recreation room should be as far separate as possible.

VI. No; the subjects are usually too childish or dry. Soldiers will not go to hear lectures on the subject of Æsop's fables, or to see magic lanterns, or to listen to lectures on a dry subject like geology; something more rational and instructive ought to be provided for them. At present the audience usually consists of women and drummer boys.

E. T. GLOSTER,
Colonel, Commanding 97th Regiment.

Dover,
4th March 1870.

ENCLOSURE ACCOMPANYING COLONEL GLOSTER'S ANSWERS.

Men for appointment to lance corporal, to read and write fairly and work arithmetic as far as multiplication of money.

For promotion to full corporal, to read fluently books of easy narratives, to write fairly a passage dictated from the same, and to work in arithmetic the four simple and compound rules, and reduction of money.

A candidate in possession of a third-class certificate is held qualified.

For promotion to the rank of sergeant, to read a book of moderate difficulty, to write well a passage dictated from the same, and in arithmetic to work questions in simple proportion, practice, and interest, with a knowledge of regimental accounts.

A candidate in possession of a second-class certificate is held qualified.

Table of Marks for Corporal and Lance Corporal.

Rank and Name.	Reading.	Writing.	Spelling.	Arithmetic.	Total.	Remarks.
Maximum	50	50	50	60	210	

Table of Marks for Sergeant.

Rank and Name.	Reading.	Writing.	Spelling.	Arithmetic.	Total.	Remarks.
Maximum	50	50	50	100	250	

(xxxi.)—Answers received from Brevet-Colonel J. W. S. Smith, C.B., commanding the 1st Depôt Battalion, Chatham.

I. In a regimental battalion there would be no difficulty in the case of duty men not upon duty. This might be done either by enforcing attendance in addition to the usual parades and drills, or in lieu of a portion of them.

I consider the latter preferable, as men thus attend more cheerfully,—the satisfaction of many no doubt arises only from escaping drill, but even of these men, some being in good spirits might acquire a taste for learning, whereas men attending school by compulsion after the usual quota of drill, &c., regard it only as another parade, and very few take that interest in it which can alone make it profitable; like all other classes, their officers included, they require some inducement to undergo the drudgery of learning beyond the mere possession of knowledge.

I am averse from the rigid rule of the compulsory attendance at school of all soldiers until they can give proof of the possession of a satisfactory amount of rudimentary education; my experience and observation dispose me to believe that compulsory schooling on a soldier, who has not some rudimentary education when he first attends a regimental school, is nearly universally a waste of the time and labour of both teacher and scholar. I have never known an instance of a soldier, who had not some previous rudimentary education, acquiring sufficient learning in a regimental school to be useful to him, or to enable him to read and write for amusement; in fact, as a rule, I have no faith in adult education without some previous groundwork in youth.

II. In a regimental battalion I am of opinion that the schooling should be deferred until the recruits have been dismissed drill.

In a depôt battalion, as the recruits embark for foreign service soon after they are dismissed drill, there appears to be no alternative, if the depôt battalion schools are to be utilized at all, but to enforce attendance at school before they are dismissed drill; but this compulsory attendance on recruits uninterested in the work, tired and sleepy, is too often, though not unnaturally, only a form.

Instead of enforcing attendance on all until they have attained a certain standard of proficiency, I would on the contrary empower a schoolmaster to recommend the dismissal of those who after a fair trial show no disposition or aptitude to learn; they are indeed now, for all useful ends, practically dismissed, as the classes are very large, and the schoolmaster directs his teaching to the most intelligent and the most advanced, the results thereby tending mostly to the credit of the school. So long as the general education of the classes from which the soldiers are recruited is so defective, I hold it to be hopeless to expect to educate *every* soldier; the more reasonable and useful aim seems to be to improve the education of those who already possess rudimentary instruction, and to confine the elementary teaching to those who are found to be desirous and capable of learning, as these are the men who furnish the non-commissioned officers of the army, and when their characters correspond, give tone to, and raise the morale of, the army.

III. I do not think it would be advisable. Whilst encouraging education in every way amongst the non-commissioned officers of the army, I would not set up education as the sole or the chief recommendation for promotion; a certain amount of it is of course indispensable, but I consider that the standard of a 3rd and 2nd class certificate for each rank, respectively, of a corporal and serjeant, is much too high to be rigidly adhered to; the material of the army does not admit of so stringent a test,—it should be remembered that even at present there is a great difficulty in every regiment in filling the positions of serjeant and corporal with suitable men, many are retained in each rank for the sole reason that better cannot be found.

IV. I see no objection beyond that I do not think it requisite. I consider that the pay and present position suffice to procure competent teachers.

V. These are on the whole very satisfactory. The success of the practical working depends very much on the temper and accommodating spirit of the librarian, and others in charge.

I would keep the recreation room as far removed as possible from the canteen, the men who attend habitually the one do not as a rule frequent the other; in a general way it may be said that in a depôt battalion the recruits resort to the recreation room, and the soldiers who come from the service companies to the canteen.

VI. I have not lately attended any lectures to soldiers; when I used to attend I did not think that the soldiers generally appreciated them.

A suitable room in barracks provided with chairs, or forms with backs, would assist to induce the men to repeat attendance; perhaps the lecturers do not sufficiently aim at being thoroughly understood. I believe the troops derive more amusement and profit from a few popular subjects perfectly mastered, which they can carry away and talk about, than from a much cleverer lecture of which they only have a confused idea.

J. W. S. Smith, Colonel,
Commanding 1st Depôt Battalion.

(xxxii.)—Answers received from Brevet-Colonel A. M. McDonald, commanding the 7th Depôt Battalion, Winchester.

I. No difficulty, but I suggest that it should be compulsory on commanding officers to enforce attendance three times a week, and that daily attendance should be recommended to him.

II. Considering that the first requirement of a soldier is his military efficiency, I deem it preferable to defer until he is dismissed drill.

III. I am decidedly of the opinion that a third-class school certificate should be expected even for the *acting* rank of corporal, although exceptions might be left to a commanding officer to make. I think a corporal can hardly do his duties without the third-class qualification. I should be disposed not, in all cases, to insist on the higher certificate for serjeants, although its presence should be expected except in some exceptional ones, such as peculiar power to control men, &c., that practically arise.

IV. I think their position at present sufficiently good.

V. In my experience these have worked very well, collecting large numbers of men, and no doubt preventing that idleness so productive of crime. The men through their committee select their own books, and these are purchased after being examined by the commanding officer and approved (at least such was my system); this is a duty requiring much discretion, knowledge of books, and appreciation of their moral tendency, and as the men prefer sensational literature, it would be advisable, in my judgment, to have catalogues of such works as inculcate no bad principle furnished to commanding officers, and the selection confined to such; the catalogues should be as ample, and furnish lists of as attractive works (within bounds) as would please the men.

I could suggest little improvement in the working of the recreation rooms, they seem to possess all the advantages of a club, and to place the soldiers on a far better footing than their officers.

The canteen and recreation rooms under my charge are contiguous, one being on the floor above the other. I can see no drawback to contiguity if there are separate entrances to each, to avoid a quietly disposed man being taken off to treat his comrades in passing the beer bar, and provided the sound of the conversation and fumes of the beer, &c. do not reach the reading and recreation rooms.

VI. I think these do not succeed, they are only resorted to by children and a few of the weak-minded, and those who assist the schoolmaster in teaching; they are cheaply got up and are unattractive.

Schoolmasters are very monotonous in their delivery; the magic lantern slides are childish. I have found *experimental* philosophical lectures and music attractive when conducted by such people as the Polytechnic institution furnishes. I would suggest that suitable persons be hired to go from station to station. Soldiers prefer comic or theatrical displays to science.

A. McDonald, Colonel.

Appendix I. (B.)

Army Schools, &c.

B.—Tabular Summary of the Answers to Questions on the subject

Name of witness.	Appointment.	Opinion as to making attendance at school compulsory on soldiers.	Time at which attendance should commence with recruits.	Should certificates of education be made indispensable to promotion
Gen. Lord Strathnairn, G.C.B.	Commander of the Forces in Ireland.	Advantageous to do so with soldiers not on duty, on certain days of the week, but not daily.	Not on first joining, though they should be encouraged to attend.	Certainly not -
Lieut.-Gen. Sir J. Scarlett, G.C.B.	Commanding Aldershot Division.	In cavalry, not more than one hour daily, as a *maximum*, could be spared for compulsory education. In infantry time could be found.	On first joining, before commencing anything beyond the most elementary military drill.	No private should be ma a corporal unless he c read and write, and h a knowledge of the sim ple rules of arithmet A colour-serjeant requi a knowledge of boo keeping.
Lieut.-Gen. Sir J. Hope Grant, G.C.B.	Quartermaster-General to the Forces.	One hour a day might be set aside for the purpose. Nothing beyond reading, writing, and arithmetic required in a private.	Commanding officers should have the power of making the attendance of recruits compulsory. Time could well be found in winter, even if not in summer.	Very advisable except special cases.
Lieut.-Gen. Lord W. Paulet, K.C.B.	Adjutant-General to the Forces.	It cannot be carried out - -	Not until dismissed drill -	Preference to be given men with certificates, not to the exclusion other qualifications.
Lieut.-Gen. Eyre -	- - - -	Time could generally be found in the case of men not on duty, but compulsory education is undesirable.	Immediately on joining; but till they have completed their drill, attendance should be made very easy.	Decidedly - -
Maj.-Gen. Russell, C.B.	Commanding South-Eastern District.	No difficulty in it. All men under six years' service might be compelled to attend until they could read, write, and work the simple rules of arithmetic.	On first joining. One hour every evening except Saturday.	Most desirable to have educational test for p motion, but preferabl leave the qualificati to be defined by co manding officers.
Maj.-Gen. Freeman Murray.	Commanding Chatham District.	No difficulty in the line, nor as a general rule in the artillery. In the engineers it would not be expedient to carry compulsory education beyond recruits.	On first joining - -	Not advisable in the l but in the artillery sirable, except in spe cases. In the engine an educational test is present enforced.
Maj.-Gen. Carey, C.B.	Commanding 2nd Infantry Brigade, Aldershot.	No difficulty - - - -	Until dismissed drill -	Yes - - -
Col. Egerton - -	Deputy Adjutant-General to the Forces.	Compulsory education unadvisable. If introduced should be limited to recruits.	- - - -	Yes, except in special c
Col. Armstrong, C.B.	Deputy Adjutant-General, Ireland.	In mounted corps there would be difficulty, but none in infantry.	On first joining - -	Very desirable that c didates for promo should have these qu fications, which, howe should not be indis sable.
Col. Radcliffe -	Commanding Royal Artillery in Ireland.	Not favourable to compulsory education; preferable to offer inducements to voluntary attendance.	If compulsory education is introduced it would be preferable to enforce it on recruits rather than on duty men.	Yes, with rare excepti The rule generally forced in the brig under command of witness, unless in ex tional cases when special report is quired.
Col. Phillpotts -	Commanding Royal Horse Artillery, Woolwich.	No difficulty in setting aside one hour a day on four or five days weekly, for men under two years' service when not on duty.	On first joining - -	Advisable -
Col. Smyth, C.B. -	Commanding Royal Artillery, Aldershot.	Decidedly objectionable in the case of old soldiers, but desirable in the case of recruits.	On first joining - -	Yes - - -
Col. Eaton - -	Commanding 17th Brigade, Royal Artillery.	There would be a difficulty in the case of duty soldiers, but recruits should be compelled to attend.	During the period they are at drill; one hour daily, four days in the week.	Advisable as a ge rule.
Col. Shute, C.B. -	Commanding 4th Dragoon Guards.	Would make attendance compulsory on recruits, but not on old soldiers.	After being dismissed riding-school.	The rule has been str enforced, with only exception in a special in the 4th Dra Guards for two or t years.

Schools, Libraries, Recreation Rooms, and Lectures.

pinion as to g warrant rank to schoolmasters.	Opinion as to regulations for libraries and recreation rooms.	Suggestions on the subject of libraries and recreation rooms.	Should the recreation room adjoin the canteen?	Opinion as to present system of lectures to troops.
ction; it would be proper encouragement for them.	- - - -	Libraries might be provided with a better selected supply of books tending to foster military feeling.	The canteen has a disadvantageous effect on the recreation room.	——
ntage in doing so, egimental serjeant- should be next to licers.	They appear to work with good results.	More light required in the recreation rooms.	No objection if the canteen is on a regimental system, and under a separate roof.	Useful as a rule. Lectures on science, history, and military subjects more appreciated than magic lantern exhibitions.
rable - -	They are excellent -	No suggestions to make -	Better to keep them separate. If combined they should have separate entrances, and no internal communication.	Their value depends much on the ability of the lecturer. The magic lantern of little use to the men.
isable to place him the serjeant-major.	They work well - -	- - - - -	The further they are apart the better.	Very satisfactory.
isable; their present ion and privileges sufficient.	They give satisfaction -	Work-shops suggested -	They should be quite separate establishments.	Printed lectures of an interesting character, delivered at other institutions, might be utilized.
ionable; their present ion sufficiently good.	Their working and results good.	- - - - -	They should be quite distinct, and removed from each other as far as practicable.	Not sufficiently attractive.
articular objection; heir present position fficiently good.	Satisfactory - -	Refreshments should always be procurable in the recreation-rooms. A large lecture-hall or theatre should be provided.	Not adjoining, but not too far removed from each other.	Might be made more attractive, but the chance of increasing their utility doubtful.
present arrangements cient.	They work well; a great boon to soldiers.	- - - - -	Should be separate -	Lectures on military subjects suggested.
visable both on mili- and educational unds.	They work very well -	No suggestions - -	Advantageous, on the ground of management, to have them adjoining if the canteen is regimental; but they should have separate entrances.	Too dry and scientific. Readings preferred by soldiers.
teration advised in the ting arrangements.	The results are satisfactory	No suggestions - -	Not advantageous as a general rule.	Satisfactory so far as is known.
cessary to do so -	Their working satisfactory	The warming and lighting (especially the latter) should be improved.	No - - -	Generally good and instructive, and appreciated by the men.
present position iciently good.	Results satisfactory -	- - - - -	Yes, it would be advantageous.	——
sable; their present ition not adequate to ir attainments.	- - - - -	The rooms should be made in every way attractive.	No objection if the canteen is near barracks.	Their utility depends greatly on the interest taken by officers.
ld strongly recommend it, after eight or years' service.	Satisfactory - -	The Government allowance to a battery of artillery insufficient.	- - - - -	As a rule a failure. Readings much preferred. The magic lantern should be abolished.
y objections and no antage.	The regulations would work well if proper accommodation were provided.	Provision of fencing rooms recommended.	- - - - -	Not much cared for by the men.

APPENDIX I. (B.)

Army Schools, &c.

Tabular Summary of the Answers to Questions on the subject

Name of witness.	Appointment.	Opinion as to making attendance at school compulsory on soldiers.	Time at which attendance should commence with recruits.	Should certificates of education be made indispensable to promotion
LIEUT.-COL. CLARKE -	Commanding 7th Dragoon Guards.	In cavalry during the summer months at some stations there would be difficulty, but in winter attendance could be required for four days a week.	Not for the first year, but during the whole of the second year's service.	Yes, except in cases gallant conduct on act service.
LIEUT.-COL. NUGENT -	Commanding Scots Greys.	No difficulty in setting aside 1½ hour daily for men not on duty.	Not until after they had joined six months.	Yes, the rule has been a hered to and has work very satisfactorily in t Scots Greys.
LIEUT.-COL. FIENNES -	Commanding 9th Lancers.	No difficulty in setting aside a certain time daily.	Not until dismissed drill -	Very advisable -
COL. BAKER - -	Commanding 10th Hussars.	Strongly advocated. No difficulty even in cavalry for a certain number of days in the week.	On first joining - -	Yes, except in special ca
COL. OAKES, C.B. -	Commanding 12th Lancers.	Possible in winter, but not in summer	On first joining. In the 12th Lancers recruits are compelled to attend about four hours a week.	Yes - - -
COL. JENYNS, C.B. -	Commanding 13th Hussars.	Great difficulty in the cavalry for duty soldiers, but attendance should be compulsory on recruits.	Certainly on first joining. Recruits in the 13th Hussars who cannot read and write fairly are compelled to attend on joining.	Decidedly, except in t case of special efficien on points of drill or du
COL. CURETON -	Commandant, Cavalry Depot, Canterbury.	Should be compulsory on every soldier who cannot read and write, but not in time taken from his recreation hours.	On first joining - -	Should be left to the d cretion of the comma ing officer.
COL. RANDOLPH -	Commanding 3rd Battalion, Grenadier Guards.	No difficulty in setting aside time for it in the afternoon.	On first joining; the system has answered well in the battalion.	Yes, it is most essenti is carried out in the b talion.
COL. CAMERON. C.B. -	Major, 1st Battalion, 4th Regiment.	Would decidedly make attendance compulsory. It is enforced in witness' regiment with soldiers under five years' service, when not on duty, till a fair knowledge of reading, writing, and arithmetic is acquired.	On first joining - -	Most decidedly; an or to that effect in the re ment has been atten with the best results.
COL. ROBERTSON -	Commanding 2nd Battalion, 8th Regiment.	No difficulty in doing so - -	On first joining; and continue until dismissed drill.	Extremely desirable t they should be so.
LIEUT.-COL. MOSTYN -	Commanding 2nd Battalion, 23rd Royal Welsh Fusiliers.	Compulsory attendance with trained soldiers difficult to carry out, and undesirable; but no objection to it for recruits.	- - - -	No; it would interf with the command officer's prerogative.
COL. MCLEOD - -	Commanding 42nd Highlanders.	There would be no difficulty - -	After being dismissed drill	Unadvisable -
COL. HAWLEY - -	Commanding 4th Battalion, 60th Rifles.	Averse to compulsory attendance -	Military duties should be taught first.	Should not be obligat on commanding office
LIEUT.-COL. SPROT -	Commanding 91st Highlanders.	No good would result from it in the case of old soldiers; but it should be enforced on recruits.	After completing their drill and rifle instruction.	Not universally indisp sable, but in certain portions.
COL. GLOSTER . -	Commanding 97th Regiment.	Adverse to compulsory education; but school attendance is enforced on recruits in the 97th Regiment.	While recruits, before becoming duty men.	No - - -
COL. SMITH - -	Commanding 1st Depot Battalion.	Adverse to compulsory schooling -	In a regimental battalion after dismissal from drill, but in a depôt battalion on joining.	Not advisable -
COL. MCDONALD -	Commanding 7th Depôt Battalion, Winchester.	No difficulty. Attendance should be enforced three times a week at least.	Not till after being dismissed drill.	Decidedly for corpo except in special ca but not in all cases serjeants.

Schools, Libraries, Recreation Rooms, and Lectures—*continued.*

inion as to warrant rank to schoolmasters.	Opinion as to regulations for libraries and recreation rooms.	Suggestions on the subject of libraries and recreation rooms.	Should the recreation room adjoin the canteen?	Opinion as to present system of lectures to troops.
ary - -	Very popular - -	A greater variety of games required.	No - - - -	Not cared for by soldiers.
ssary - -	Work very well practically	An increased number of bagatelle tables recommended.	Adjacent, but still quite distinct.	The subjects do not generally possess interest for soldiers. Readings preferable to the magic lantern.
tion - -	Work very well, and are a great boon to the men.	A refreshment bar should always be provided in the recreation room when the latter is not near the canteen.	Yes, as a general rule it would be advantageous.	Satisfactory on the whole.
osition sufficiently	Accommodation insufficient.	The recreation room should be arranged to serve also as a theatre or lecture room.	No advantage, and possible disadvantages.	The lecturers not often very competent.
nable, and a dis- ige to the service.	Practical working good, and very satisfactory.	- - - - -	No, it would be a disadvantage.	Satisfactory. Lectures should be more frequently given.
l be a good regula- thoroughly deserv- ies.	The present system works very well indeed, and is a great source of comfort to the men.	The provision of three rooms instead of two, one entirely for writing, recommended. Also permission to keep lights in the recreation room an hour longer.	Certainly not - -	The system works well.
position good -	They work very well; the rooms are popular and much frequented.	Recreation-rooms at Canterbury far too small.	No, it would be a disadvantage.	Not attractive, and draw but small numbers. Musical entertainments preferable.
position sufficiently	They work well - -	- - - - -	Adjacent, but still separate	Entirely depends on the aptitude of the schoolmaster.
mental objection -	Have had a most beneficial effect.	Should be under the superintendence of a selected officer in each regiment. Charges for damage to books too heavy.	It would be decidedly disadvantageous.	Not attractive. Readings and musical entertainments much more popular.
are of any objection	They work well and produce good results.	Should have facilities for theatrical entertainments, &c. Canteen funds might be utilised for improvements in recreation rooms.	It would afford increased convenience, and probably not lead to disadvantage.	Generally do not excite much interest; readings, &c. preferred.
ionable. Present on quite good gh.	They work admirably -	More fuel and light required. Libraries should be regimental.	Very undesirable - -	Dull and unattractive.
are objections to it -	Very good - - -	Regimental libraries more satisfactory.	No - - -	Unsatisfactory.
ble - - -	They work well - -	Canteen profits might be applied to general regimental improvements.	Under the same roof, but still separate.	Not much cared for; theatrical entertainments preferred.
nswer) - -	- - - -	Recreation-rooms should be so built as to be available for theatrical entertainments, &c.	There is no connection between the two institutions.	Scarcely at all attended at Dover.
nadvisable - -	- - - -	Supply of games insufficient -	No; they should be as far separate as possible.	Unsatisfactory; the subjects too childish or dry.
ection, but not re- e.	On the whole very satisfactory.	Suitable rooms for lectures suggested.	No; it should be as far removed as possible from the canteen.	Not generally appreciated. Popular subjects more amusing and profitable.
t position sufficiently	Work very well - -	No suggestions - -	No drawback to the arrangement if each has a separate entrance.	Unsuccessful; the magic lantern childish; theatrical displays preferred.

Appendix I. (C.)

Army Schools, &c.

C.—REPLIES TO QUESTIONS ADDRESSED TO ARMY SCHOOLMISTRESSES.

Questions issued by the Commission.

I. Are there any points in regard to the present position, &c. of Army Schoolmistresses which you would wish to bring to the notice of the Commission?

II. Will you favour the Commission with any suggestions which you may think it desirable to make in reference to the system of instruction in Army Schools, so far as it comes under the superintendence of the schoolmistresses?

The above questions were addressed to two Regimental Schoolmistresses.

(i.)—Answers received from Mrs. C., Regimental Schoolmistress.

I. The position accorded to an Army Schoolmistress if married to any one in the service is precisely that of a woman of the regiment. She is included as such in all returns and travels as such with the troops by sea and by land. If unmarried she is privileged with lodging allowance, 8*s.* 6*d.* a week, in lieu of quarters, travels second class and is rationed as a second class passenger in passages by sea. It now sometimes happens under these regulations that a pupil-teacher, when promoted to schoolmistress, is elevated in emolument and treatment above the mistress who trained her.

The pay too of schoolmistresses and assistants is quite inadequate to support an appearance of respectability unless the husband or parents be in a position to help in the matter. Twenty-four pounds a year, the pay of the majority of schoolmistresses, is less than that of a drummer of infantry, while that of a pupil-teacher or monitress, 2½*d.* to 6½*d.* a day, is far less than could be earned by a grown girl or young woman of intelligence at any other, even partial, occupation. A treatment so inconsiderate and illiberal leads, in my opinion, to an indifferent appreciation of the worth, duties, and calling of regimental teachers, both among parents and officers. In India, where I served eight years, the old regulations as to position still obtain, though the pay (10*s.* a month better than at home) is but barely a recompense for the hire of native servants to look after home and children in one's absence. At the same time the duties in India are heavier and more onerous on account of the sole instruction of grown girls being in the charge of the schoolmistress. Civilian schoolmistresses in India draw from four to six times the pay of those in the army there. Schoolmistresses too are liable to be placed on the unemployed list, or discharged altogether without notice; a measure which acts with great severity on unmarried ones and others having no resources to fall back upon, since the smallness of pay precludes the possibility of laying by a provision for such a contingency.

II. The present system of instruction as arranged for army infant and girls' industrial schools is well defined and suitable. I think that in some cases infants are sent to school too young, and that it would be well to leave a discretionary power with the schoolmistress as to the time, under three years of age or so, when they should be admitted as regular attendants.

The grant in aid of the industrial school may be considered too much or too little, according to the intention of Government. If it is solely intended as a means to purchase materials whereby to teach needlework, it is too much by half: but if it is intended to give a fair amount of clothing to each child it is too little by half. At present the common feeling with parents is that for every child attending school a grant of 5*s.* a year is allowed. Quite a wrong impression since but 5*s.* is allowed on the average daily attendance of children over four years of age, which is generally 25 per cent. under the number borne on the books. On Saturday there is generally but a very small attendance, as the mothers keep the elder children to assist in the domestic work, and do not take the trouble of getting the younger ones ready for school. Under such circumstances the Saturday morning school might be done away with.

(ii.)—Answers received from Mrs. D., Regimental Schoolmistress.

I. Single schoolmistresses are treated as second-class passengers, whether travelling by sea or land, and in reference to this and other matters relating to position, I think no dissatisfaction prevails.

The majority of single schoolmistresses receive 24*l.* a year, and the feeling is general that this amount is insufficient.

Increase to 30*l.* only comes with advancement to 2nd class. Very many schoolmistresses of 8 to 12 years standing, of unexceptionable character and ability are only 3d class. Young schoolmistresses see this, and it disheartens many who would, with better pay and prospects, be cheerful and zealous teachers. As a rule the single mistresses rely for assistance on their friends, and those who are unfortunate enough to have no such resources are obliged to deprive themselves of necessaries, in the way of food, to keep up respectable clothing.

It is only when a single schoolmistress is in receipt of lodging money that she can really be said to have a living.

They are not permitted to obtain a ration of bread and meat by paying the Government rate. If this were allowed I feel sure that it would be considered a favour by all single schoolmistresses.

II. The system of instruction is I think well adapted to infants of from three to six years; children under three years are taken together with some who cannot speak. These children are too young to keep themselves clean, or make known their wants; they impair the discipline of the school and take the attention of the mistress from the children who would benefit by her instruction. It would doubtless be to the benefit of the other children if all under three years were excluded from the school. The industrial grant, in its present state, is a cause of annoyance in almost every regiment. The mothers think that 5*s.* is allowed for every child in the regiment for clothing; whereas all children under four years and boys attending the masters school are not entitled to it by the regulation. If it be the intention of the authorities to cloth the children the grant is insufficient; but if the grant is intended only to provide materials for teaching the children to sew, knit, darn, &c. one-third of the present grant would be enough.

It would also I think tend to the convenience of the parents if the hours for the infant school were from half-past 9 to half-past 12 and the industrial school from half-past 1 to half-past 3.

The pay of pupil-teachers and monitresses is too little to induce them to care much about the situation, the pay of the former being 6*l.* a year and that of the latter 4*l.* The parents, in the case of the monitresses, complain that it is not sufficient to find them in clothes and boots.

Appendix I. (D.)

Army Schools, &c.

D.—MEMORANDA RELATING TO ARMY SCHOOLS.

(i.)—Memorandum by the Rev. G. R. Gleig, M.A., Chaplain General to the Forces.

The regimental and garrison schools of the army are an immense boon, both to the men and to the children. No one knows so well as I how hard it was to make this, at one time, understood. But I fancy that there are not now two opinions on the subject among persons acquainted with barrack-life. Men who take an interest in learning acquire tastes by degrees which lift them out of the slough. Not a few of them become religious, and this is strikingly the case in adult schools of which the masters are musical and fond of giving lessons in singing. The men come to them at bye hours and enter in considerable numbers after being taught to sing into the church choir; this is always a result to be rejoiced in. The adults, however, receive from the schoolmaster no direct religious instruction. When he is a wise as well as a good man, he contrives to convey such instruction indirectly, and it tells.

Lads under a certain age, I think 18, are in most regiments put under the chaplain for special religious instruction. Such of them as attend the day-school with the children are present, when duty permits, at the daily Bible lesson. But their special instruction goes on on Sunday, and on two other days in each week, for one hour in each day. I find no young people anywhere so well taught as these lads generally, and the children of soldiers. This is, of course, due in part to the discipline which constrains them to be present when instruction is given. But it is likewise owing—and quite as much—to the skill with which the school

masters open the intelligence of the young people, and the earty manner in which our chaplains and many officers nd their families throw themselves into the work of eaching. The schoolmasters also are always ready to help.

I have seen a good many civil schools, both in town and ountry, but very few indeed come up to the schools of the rmy in this as in other respects.

If I rightly understand a question which has been put to me regarding the moral results of the regimental schools, requires me to say what I think of the moral condition of the drummer boys and soldiers' children out of school. have seen them in all situations, and I honestly declare hat in my opinion they are better disposed in every respect han young people of the same class in civil life. They are vonderfully clean and always respectful, never use bad anguage, and are kind to each other. The moral influence upon them of the schools, both secular and religious, is very striking.

I knew the army long before these schools existed; here is a vast difference between what soldiers' children were then and what they are now, towards bringing which about the schools have played no mean part.

G. R. Gleig,
Chaplain-General.

(ii.)—Memorandum by Brevet-Colonel A. C. Gleig, Inspector of Army Schools, supplementary to his Evidence.

Attendance of Soldiers at School.

I have stated in my evidence to the Commissioners that I should not be disposed to order commanding officers to give men leave to attend school instead of attending drill parades, although I have known this indulgence granted by some commanding officers with very good effect. I should like to qualify this opinion in some degree. I think there could be no objection to make it a rule of the service, to which all commanding officers should conform, that well-conducted men in the first class for drill should be allowed to volunteer for school, and should be exempt from ordinary fatigue and drill parade on the school days. I have seen this plan in operation in one of the best drilled regiments in the service, with excellent effect. It has so many things to recommend it. It makes attendance at school the reward for proficiency in drill, and tends to encourage both school and drill.

I am not sure that I expressed as strongly as I intended to do in giving my evidence, the necessity which I think exists for making men attend school, after having once joined it, whether on compulsion as recruits, or voluntarily, until possessed of a school certificate of the third class at least. The qualifications indicated by this are of so humble a character that it seems to me a waste of time, and of labour, and of money, to keep school open for men who fail to derive so moderate an amount of instruction from their attendance. For the mere discipline of school, which with children is so important, is of less value for soldiers, who are constantly receiving lessons in conduct and manners and so forth outside the school.

Some few men might not be able to get even a third-class certificate. Such men should be dismissed without it, but only after they had attended a certain number of times, and for a certain period, to be established by authority.

A man once at school as a recruit should attend regularly. No duty whatever should be allowed to interfere with his doing so. And only certain *specified* duties should be allowed to prevent the attendance of a man who had been allowed to enter his name on the school books as a volunteer. Guard mounting, picquet duty, and general officers' parades alone, under ordinary circumstances, should be allowed to do so, I think. The school hours must of course be so arranged as to fit in with this with the least interruption of other regimental work.

The attendance of band boys, drummers, buglers, and trumpeters is much less regular in many corps than it ought to be. I think this very important. And I would have it established as a regulation of the service that all such lads, under a certain age, should attend school at least as frequently as recruits, and as regularly.

The attendance of non-commissioned officers cannot be as regular under ordinary circumstances as that of other classes of soldiers may be made. It should be ordered that the most convenient arrangement should be made to enable this class of soldiers to attend. But the widest discretion must be allowed to commanding officers in reference to them. For the commanding officers are responsible for the efficiency of their corps; and this depends greatly upon the character of the non-commissioned officers whom *they* appoint and train.

Soldier Assistants.

I think the system on which assistant teachers are detailed and paid is very defective. So many teachers are allowed for so many nominal pupils, whether these actually are present in school or not. And the proportions are such that if all the pupils were present at one time the teachers could not possibly instruct them. On the other hand it sometimes happens that teachers are paid for doing nothing or almost nothing, when the school attendance is small, and the nominal roll of those belonging to the school is large. It has been proposed to base the number of teachers to be allowed in a school upon the average attendance. But this would not do unless the attendance were less variable than in many schools it now is. Because this arrangement would not provide a sufficient staff of teachers to meet the requirements of the school on days on which the attendance might be much above the average. I think the proper arrangement would be somewhat of this kind.

The number of adults to be taught in one class should be first determined. This would be less in the more elementary classes than in those of more advanced attainments. But all this having been duly considered, the next thing would be to determine how many classes (each to be taught by one man, and one of them by the schoolmaster) the schoolroom would hold. This being done, a soldier should be detailed for every class except the one to be taught by the schoolmaster, to act as school assistant. The assistants thus detailed should parade at the school hour invariably, and should be employed in the school or not according to the number of classes present. But the full allowance of pay for the whole body of assistants should only be allowed by the public when the proper number of men to constitute a class for each teacher was actually present and under instruction in the school at one time. The pay actually drawn, whether in full, or for somewhat less than the full number of classes, should be divided equally among all the assistants. A certain small margin should, however, be allowed in favour of these. Thus if there were any number less than the half of a class absent from school, the attendance might still be allowed to count as a full one, and the full pay of the assistants be drawn accordingly.

If regulations should be introduced by which a regular school attendance can be secured, the defects of the existing arrangements will be very easily removed. But those arrangements, as they now exist, will be more unsuitable than ever.

It has been often recommended that the payment of the teachers should be proportioned to and dependent upon the amount of work they do. And the advantages of such a system of payment, if practicable, are obvious. But it has not been found practicable to secure them. The arrangement which I now submit to the consideration of the Commissioners would, however, to a great extent secure them, as far as the assistants are concerned. And a direct inducement would be presented to them to persuade their comrades to attend school. Under the existing arrangement if a teacher be disposed to be lazy, the inducement is all the other way. Because so long as a sufficient number of names are kept upon the school books to authorize the payment of the assistant, the smaller the actual attendance of men, the more comfortable does he find himself.

I am very far from thinking that either schoolmasters or their assistants discourage the attendance of the troops at school; or would prefer a small attendance to a large one. I am quite sure, speaking of them as a body, that their feeling is all the other way. And this incidental advantage of the change which I suggest is by no means that which induces me to recommend the change. But so far as it goes I think it *is* an advantage. The great object which I have in view is to secure a just proportion between the numbers of pupils and of teachers, with a view to more efficient teaching and to a fair return for the wages which the public pays to the teachers.

Duties of Superintending Masters.

The duties of superintending schoolmasters have changed considerably since this class of officers was first established. I hope they will be still further extended, so as to embrace the examination of detachment schools of importance. A much more appropriate title, because more indicative of the character of the duties which these officers now perform, would be sub-inspector. I think too, and have always thought, that it would be advantageous to the service to employ officers who had never been schoolmaster (perhaps from the half-pay list) in a certain proportion to perform the duties of sub-inspectors of schools. The appointments of these officers would of course not be for life, as in the case of schoolmasters promoted to be sub-inspectors. The expense of retirements would therefore be

saved to the public. And I think it would be of advantage to receive reports of schools occasionally from officers who view them not from a schoolmaster's point of view.

It would not do, however, to employ as sub-inspectors of schools more officers from the combative ranks than from the list of schoolmasters, otherwise the chances of the schoolmaster's promotion would be too much diminished.

Periodical Examination.

Under the existing regulations every regimental school is examined and reported upon twice a year by the regimental schoolmaster, and once a year by a superintending schoolmaster. I think these periodical examinations, at any rate of adult schools, might be made less frequent in regiments in which a satisfactory number of school certificates was taken each year.

Schoolmasters' and Schoolmistresses' Quarters and Allowances.

When the army schools were first established upon their present footing, special quarters were commonly provided for the masters. This is no longer the case; although special quarters are still to be found for them at certain stations. The older masters complain that they are losers by this. The younger ones are of course not affected by it in the same way, because they joined the service since the new arrangements came into force. As schoolmasters are still, upon the whole, better lodged than subaltern officers, I do not think them very hardly treated in this particular. But there are one or two others in which I think they might be more liberally dealt with. I think that a schoolmaster who is expected to prepare lectures for the troops should receive a small addition to his allowance of fuel and of light, as he can only prepare his lectures at night, unless he either neglects his school work, or neglects to take the exercise which is essential to the maintenance of his health. Some additional light can indeed be granted under the existing regulations. But great complaints are made at stations where there is no gas, of the hardship of having to study by the light of a single tallow candle. And at some stations at which there is gas, schoolmasters are not allowed to consume it after it has been put out in the men's barrack rooms. A little more liberal treatment would involve no perceptible addition to the expenses of the schools, and would go far to put men in good humour who at present think themselves hardly dealt with in some respects.

Relating to the subject of quarters, it has always seemed to me to be very hard that when a schoolmaster marries a schoolmistress, the pair are only entitled to the quarters and fuel to which every schoolmaster is entitled who marries with leave. I cannot see on what ground the public is entitled to deprive the mistress of that to which she was entitled before her marriage, and to which she would still be entitled if she married anybody but a schoolmaster or a non-commissioned officer entitled on his own account to quarters.

The regulations under which schoolmistresses are paid bear very hardly upon some of the most deserving of the body, and I think should be assimilated to those under which schoolmasters are paid. The conditions of service of these two classes of teachers are not precisely similar, and this would have to be considered in drawing up new regulations; but there would be no difficulty in that. Under the existing rules of the service some of our most skilful and most hardworking mistresses have no prospect that I can see of ever receiving a larger salary than that which they got on first joining; viz., 24*l.* per annum.

Schoolmasters' Grievances.

Adverting for a moment to the subject of schoolmasters' grievances, perhaps I may be allowed to suggest, with great deference to the Commissioners, that as it is the sense of injustice even more than the amount of substantial injury done to a man which is apt to make him discontented, it might be worth while to consider whether some small addition might not be made to the pay of the older masters who may have been induced to enter the service by the prospect of advantages of which recent regulations have deprived them. Even though this were so small (as it necessarily must be in perhaps most cases) as to bear no proportion to the pecuniary loss which certain changes of regulation have brought upon individuals, the mere recognition of their title to consideration on the score of their lost privileges would gratify them; and an increase of pay, however small, would clearly be a substantial improvement upon their present circumstances, as far as it went.

A. C. Gleig, Colonel,
Inspector of Army Schools.

4th March 1870.

(iii.)—Memorandum by Walter McLeod, Esq., Head Master of the Model School, Royal Military Asylum, Chelsea, supplementary to his evidence.

The following suggestions, respecting army schools and schoolmasters, are respectfully submitted for consideration.

I.—Army Schoolmasters.

1. That the existing Normal School be done away with.
2. That candidates for the office of army schoolmaster be,—
   - (1.) *Civilians* who have been in a training college for not less than 12 months, and who have passed the examination prescribed by the Committee of Council on Education:
   - (2.) *Soldiers* of the rank of serjeant, who have passed such an examination as may be considered necessary:
   - (3.) Pupil-teachers of the Model Schools who have attained the age of 21 years.
3. Civilian candidates to spend six months in the Model Schools; and soldier candidates and pupil-teachers to be sent (1) for six months to a training college at the expense of Government, and (2) to the Model Schools for an additional six months.

Or, soldier candidates might be prepared at a large camp or garrison,* under a first-class army schoolmaster, and sent afterwards, for six months, to the Model Schools; and pupil-teachers might be fully qualified to pass the requisite examination before leaving Chelsea.

4. That all candidates, whether civilians, soldiers, or pupil-teachers, when appointed army schoolmasters, be attached for six months to a garrison school or to a camp.
5. That the pay of the civilian pupil-teachers of the Model Schools be increased *annually*. The rate of pay to be,—

6*d.*	a day for those	between	17 and 18 years of age.
7*d.*	„	„	18 and 19 „
8*d.*	„	„	19 and 20 „
9*d.*	„	„	20 and 21 „

6. That the pay of schoolmasters on appointment be 4*s.* a day, and that it rise by *biennial* and *triennial* increments of 6*d.* a day to a maximum of 7*s.*

The pay therefore to be as follows:—

On appointment	-	-	4*s.* 0*d.* a day.
After 2 years' service	-	-	4*s.* 6*d.* „
„ 4 „	-	-	5*s.* 0*d.* „
„ 6 „	-	-	5*s.* 6*d.* „
„ 9 „	-	-	6*s.* 0*d.* „
„ 12 „	-	-	6*s.* 6*d.* „
„ 15 „	-	-	7*s.* 0*d.* „

7. That if it be considered necessary to arrange the army schoolmasters into classes, the classification be as follows:

III.	Class schoolmasters,	on appointment.
II.	„ „	after 6 years' service.
I.	„ „	after 12 years' service.

All schoolmasters, if deserving, should receive warrant rank after six years' service.

8. That superintending schoolmasters be chosen from Class I.; their pay to be 7*s.* 6*d.* a day, and to be increased to a maximum of 8*s.* 6*d.* a day after 15 years' service.
9. That after 21 years' service the pension of army schoolmasters be 3*s.* 6*d.* a day, and 4*s.* a day after 28 years' service.
10. That the clothing of army schoolmasters be as stated in art. 6 of Army School Regulations of January 1, 1859.†
11. That there be no inspection of the kits of army schoolmasters; and that proper accommodation be provided on board ship for a schoolmaster and his family.
12. The lowering of the pay on appointment and other alterations have tended to introduce a class of candidates inferior in character and qualifications to those formerly received. Major-General Portlock thus predicts the results that have actually taken place‡: "By lowering the pay on "appointment, it lessens the motives for competing for "the appointment amongst civilians, and this, in the end, "would lower the tone and ability of army schoolmasters. "The old system has raised to the position of school-"masters some of its best masters from the army, and the "number of competitors is every day increasing. By "lowering the pay at starting the motive for competing "will be diminished; *civilians will be discouraged from*

* Certain stations, such as Aldershot, the Curragh, and Woolwich, might be recognised as training schools for soldier candidates.
† A sword need not be supplied.
‡ Appendix to Second Report of Army Schools, p. 20.

competing, and soldiers of a lower degree of attainments will be encouraged to compete; the same class of candidates will not be induced to come forward from the civilian class, and the general standard of qualification will be lowered."

II.—Army Schools.

1. That army schools be examined *once a year*, either by the inspector or by the superintending schoolmaster, and *not by the master of the school.*

2. That the *written examinations* required of children be done away with, with the exception of those belonging to the first class, or to the first and the second classes; and that the written examinations be restricted to dictation and arithmetic.

The lower classes and the upper classes in subjects not specified above, to be examined *viva voce.*

3. That the number of school forms be reduced and simplified. A great deal of the master's time is devoted to these forms, to the detriment of the school. Colonel Gleig, when writing of one of the forms which the schoolmaster has filled up, "regrets that the testing of the accuracy of "the schoolmaster's return on form A, leaves an inspector "very little time for observing the master in the manage- "ment of his school, and his assistants in that of their "several classes." If this is the result when *testing* the accuracy of a *single form*, the result to a school may be imagined when several forms have to be filled up, some of them in duplicate, two or three times a year, in addition to the monthly reports and the daily school register.

4. That instead of examining and classifying new men at the time they first join the adult school,—a plan which withdraws the master continually from direct teaching and materially interferes with the discipline of the classes,—an afternoon be set apart, *once a fortnight*, or *once in three weeks*, for such examinations; and arrangements might be made to hold these examinations at such times as shall not interfere with the regular school duties.

5. That the plans in use for registering progress, by requiring each man and each child able to use it to have an examination book (1) for the examinations on joining school, (2) for those of the assistant inspector, (3) for those of the superintending schoolmaster, or of the schoolmaster, are, in reality, a bar to progress. Colonel Maude says.* "The time of the schoolmaster and of his assistants is "frittered away arranging these men into classes, enter- "ing their names in the registers, finding and putting "away their copy books when they attend, and in exa- "mining, classifying, and reporting their progress every "half year, when they have attended so seldom since "the last examination took place, that no great change, "if any, can be expected."

6. That the two-fold classification of schools according to attainments (1) in arithmetic, (2) in reading, is injurious to discipline.

7. That the questions in arithmetic for first and second class certificates should be less difficult, and arranged in proper logical order. It is absurd, for instance, to teach proportion and practice before fractions.

The questions should be printed and placed in the hands of each man; fewer questions should be given, and more time allowed for the solutions.

Full marks are given, at present, when the answer is absolutely correct; but no marks, I understand, are allowed when there is an error in the working, although the soldier may show that he thoroughly understands what he is doing. This disheartens the men.

The stereotyped form of questions must, inevitably lead to "cramming." The schoolmaster knows the kind of question that will be given at the arithmetical examination, and carefully drills his pupils in working sums according to the prescribed models. Greater scope and greater variety would produce more thorough arithmeticians. Slates or scribbling paper should be allowed at all examinations; such aids are allowed to all candidates at the Civil Service and other competitive examinations.

8. That the method of noting the number of mistakes in the dictation exercises is unfair. Dictation is given in order to test the *spelling*, and only those words that are incorrectly spelt should be noted as mistakes in the spelling of words. But in all examinations "the improper use of "capital letters in the exercises written from dictation has "been reckoned as mis-spelling, and it is probable that "nearly a fourth part of the mis-spellings noted were of "this kind, but I have no record of the precise number,"† Mistakes, therefore, which properly belong to composition and grammar are noted under the head of spelling, and thus men and children are made to appear worse spellers than they really are.

9. The fairest method of examination for certificates is to attach a numerical value to the *exercise* in dictation and to *each question* in arithmetic, and to grant a first-class certificate to every man who obtained 70 or 75 per cent. of the total number of marks, a second-class certificate to those who obtained 50 per cent., and a third-class certificate to those who received 40 per cent. of the whole.

Thus, if the number of questions in arithmetic for a first-class certificate were 10, and the total number of marks 200, and if the total number of marks for dictation were 50, deducting *one mark* for every mistake in spelling, then a first-class certificate would be granted to every man who obtained 175 marks, reckoning 70 per cent. of the whole as the number to be obtained by a holder of a certificate of the first order. The same method would be adopted in granting certificates of the second and the third class.

10. That an impetus would be given to education generally in all army schools,—

(1.) If an order were issued that all soldiers should attend school until qualified to read fairly, to write fairly from dictation, and to work questions in the four simple and compound rules of arithmetic, and in reduction of money.

(2.) If a money value were attached to the possession of a first-class certificate.

(3.) If commanding officers only promoted those men who held a certificate.

Promotion to be as follows:—

(1.) A third-class certificate to qualify for corporal.
(2.) A second-class certificate to qualify for serjeant.
(3.) A first-class certificate to qualify for staff-serjeant.

11. Should these recommendations be carried into effect, no real grievances would any longer exist. The army would possess not only a competent, but a contented and a zealous staff of schoolmasters, and an efficient system of education in regimental and garrison schools.

Walter McLeod,
Head Master,
Model Schools, R. M. Asylum.

E.—STATE OF EDUCATION IN THE ARMY.

Table showing the State of Education in the Army on the 1st January 1869, from a return received from the Adjutant-General, dated 1st March 1870.

	Number returned.	Per centage in 1869.	Per centage in 1868.
Class 1. Who can neither read nor write -	15,207	9·00	9·46
„ 2. Who can read but not write - -	15,263	9·04	10·59
„ 3. Who can read and write - -	127,959	75·84	73·80
„ 4. Who have a superior degree of education.	10,283	6·09	6·1

This return does not include nine battalions of infantry and two regiments of cavalry, from which no returns have as yet been received.

The following table shows the proportion of "uneducated" among the several branches of the service, comprising under that term classes 1 and 2 of the above table. The per centages in the last six columns are taken from former Reports of the Council of Military Education.

Corps.	Classes 1 and 2 uneducated.						
	1868.	1867.	1866.	1865.	1864.	1860.	1858.
Cavalry - -	8·20	10·90	19·13	19·78	20·80	22·03	24·8
Royal Artillery -	18·03	18·30	20·42	19·41	22·09	25·65	40·4
Royal Engineers -	0·39	1·34	3·17	3·34	3·44	5·36	3·0
Military Train -	23·44	24·37	24·30	38·62	35·06	42·37	32·6
Foot Guards -	7·16	8·12	8·66	10·06	9·73	10·96	20·4
Infantry of the Line	21·01	23·54	33·99	35·71	36·40	45·62	44·6

Wm. Napier.

Appendix I. (F.)

F.—DOCUMENTS CONNECTED WITH THE ESTABLISHMENT OF ARMY SCHOOLS.

Army Schools, &c.

(i.)—Letter of His Royal Highness the Duke of York to Viscount Palmerston, Secretary-at-War, recommending the Establishment of Regimental Schools.

My Lord, Horse Guards, 26 August 1811.

The advantages which must attend the establishment of regimental schools throughout the Service, for the education of young soldiers and soldiers' children, are so apparent, that I feel it incumbent upon me to request your Lordship will submit the measure to the immediate consideration of the Lords Commissioners of the Treasury.

The efforts which hitherto have been made on this head are unavoidably kept within narrow bounds, owing to the inadequate means of carrying any effectual or general arrangement into execution; and when I state the few wants in which the present difficulty originated, I trust the Lords Commissioners of the Treasury will be induced to sanction the expense, which will be trifling comparatively with the benefits attending such an establishment. In the first place, it is essential that a serjeant-schoolmaster should be appointed to each battalion, and I would recommend that he should be paid according to the rate of pay now attached to the paymaster's clerk; and it would be the duty of this person to instruct the boys receiving pay, and also the soldiers' children, gratis.

It will also be necessary that the Commissioners for the affairs of barracks shall be authorized to appropriate one room in each regimental barrack for the use of the school, with a proportionate amount of fuel in the winter months; and it will be essential to allow an extra charge upon the contingent account of each regiment for the articles of stationery and books which may be requisite for the use of the boys and children.

As the future discipline of the Service is much involved in the importance of this subject, I shall be glad to be furnished with the decision of the Lords Commissioners of the Treasury, in order that in the event of their approval I may take the earliest opportunity of carrying the necessary arrangements into execution.

I am, &c.
(Signed) Frederick,
C. in C.

(ii.)—War Office Circular announcing the Establishment of Regimental Schools.

Circular No. 79.

Sir, War Office, 27 December 1811.

The Prince Regent having had under his consideration the advantages which would result to the army from the establishment of regimental schools for the instruction of young soldiers, and of the children of soldiers, I have the honour to acquaint you that His Royal Highness has been graciously pleased to order, in the name and behalf of His Majesty, that, in each battalion or corps, a regimental school shall accordingly be forthwith established.

The school is to be placed under the superintendence of a serjeant-schoolmaster, and you are to select a person properly qualified for the situation, who is to be an attested soldier, and will be borne on the establishment, with the same pay and allowances as the paymaster-serjeant of the corps.

When the corps is in barracks, a room will be appropriated for the school, and an allowance of fuel in the winter months.

The sum of 10*l.* per annum will also be allowed, from the 25th instant inclusive, on account of the charges to be incurred for stationery and other incidental expenses of the school, and may be stated half-yearly in the paymaster's regimental accounts.

Instructions as to the plan of education to be adopted in the regimental school will be issued by His Royal Highness the Commander-in-Chief.

I have, &c.
Colonel of the (Signed) Palmerston.
Regiment of

Appendix I. (G.)

G.—DOCUMENTS CONNECTED WITH THE APPOINTMENT AND PAY OF ARMY SCHOOLMASTERS.

Army Schools, &c.

(i.)—Royal Warrant creating the Rank of Schoolmaster-Serjeant, dated 2 July 1846.

Victoria R.

Whereas with a view of improving the system of instruction in the regimental schools, We have deemed it expedient to introduce into Our army a class of men better calculated to perform the duties of schoolmasters in the several regiments of Cavalry and Infantry, Our will and pleasure is that such persons as, after having obtained a certificate of fitness from the training school established by Our authority, shall be appointed schoolmaster-serjeants, shall be allowed the pay of 2*s.* 6*d.* a day, with an increase of 6*d.* a day to be granted by Our Secretary-at-War at his discretion, for efficiency and good conduct.

The schoolmaster-serjeants so appointed will take rank next after the serjeant-major, and will be entitled when placed on the pension list to an increase of 6*d.* a day to the pension to which they would have been entitled as serjeants.

It is Our further will and pleasure that assistant-schoolmasters, who shall also have obtained a similar certificate of fitness, shall be allowed the pay of serjeants, with an increase of 6*d.* a day, to be granted by Our Secretary-at-War at his discretion, for efficiency and good conduct.

The assistant-schoolmaster will have the same claim to pension as a serjeant.

In order to secure an efficient superintendence over the regimental schools, it is Our will and pleasure that an inspector of regimental schools shall be appointed by Our Secretary-at-War.

Given at Our Court at Buckingham Palace this 2nd day of July 1846, in the tenth year of Our reign.

By Her Majesty's Command,
Sidney Herbert.

(ii.)—Royal Warrant constituting Three Classes of Army Schoolmasters, dated 31 May 1854.

Victoria R.

Whereas We have deemed it expedient to revise Our warrants of the 2nd July 1846 and of the 30th March 1850, Our will and pleasure is that from and after the 1st July 1854 this Our warrant shall be the sole authority for regulating the appointment, pay, and pension of army schoolmasters and assistant-schoolmasters, and for establishing and regulating army infant and industrial schools.

2. Army schoolmasters and assistant schoolmasters shall be appointed by Our Secretary-at-War from candidates who have obtained a certificate of fitness from the training school established by Our authority.

3. Army schoolmasters shall be divided into classes, to be termed,—

First-class schoolmasters,
Second-class „
Third-class „
Assistant „

The classes shall respectively consist of such numbers as, in the opinion of Our Secretary-at-War, the exigencies of the Service shall require; and the selection for and promotion to each class shall be regulated by Our Secretary-at-War.

4. The first-class schoolmasters shall be warrant officers, and Our Secretary-at-War is hereby empowered to grant warrants to such schoolmasters as he may select for this class. The first-class schoolmasters being warrant officers will rank next to the commissioned officers; and the second and third class schoolmasters will rank next to the serjeant-major, and the assistant schoolmasters will rank as serjeants.

5. The pay of each class shall be as follows:—

	s.	d.		
First-class - -	7	0	a day	without beer money.
Second-class - -	5	6	„	
Third-class - -	4	0	„	
Assistant-schoolmasters -	2	0	„	

6. Schoolmasters of the first class will be entitled to pension at the rate of 6*d.* a day in addition to that of a serjeant-major; and the schoolmasters of the second and third class to 6*d.* a day in addition to that of serjeant.

Assistant-schoolmasters will be entitled to the same rate of pension as that of serjeant.

7. In every garrison or regiment to which a trained master has been appointed, there shall be established, under such regulations as may from time to time be promulgated by Our Secretary-at-War, an infant and industrial school.

8. The infant school is to consist of the younger children of both sexes, and shall be under the sole charge of the schoolmistress, who will instruct the children in reading and writing until they are sufficiently advanced to receive instruction from the trained schoolmaster or assistant-schoolmaster.

9. The industrial school shall consist of the female children, and shall be under the sole charge of the schoolmistress, who will instruct the children in needlework, knitting, and household occupations. The younger boys may likewise attend the industrial school if their parents desire it.

10. Non-commissioned officers, drummers, and privates who may send their children to the infant and industrial schools, or to either of them, shall be required to pay for this privilege at such rates as may be fixed by Our Secretary-at-War, and the amounts of such payments, or such portion thereof as Our Secretary-at-War may decide, shall be appropriated to the use of the schoolmistress.

11. The schoolmistress will be allowed 14*l.* per annum in each regiment of Cavalry, and 2*l.* per company per annum in each regiment of Infantry, in addition to the amount which may be received by her for instruction given in the infant and industrial schools.

12. The children of barrack serjeants, of warders and servants of military prisons, or of pensioners or discharged soldiers holding civil situations at the station where a garrison or regimental school with a trained schoolmaster is established, may attend the same on payment to the schoolmaster, if they attend his school, or to the schoolmistress if they attend one or both of the schools under her charge, at such rates as may be fixed by Our Secretary-at-War.

13. In order to secure an efficient superintendence over army schools, it is Our will and pleasure that an Inspector-General of Schools be appointed by Our Secretary-at-War.

14. Given at Our Court at St. James', this thirty-first day of May 1854, in the seventeenth year of Our reign.

By Her Majesty's Command,
SIDNEY HERBERT.

(iii.)—WARRANTS to FIRST-CLASS SCHOOLMASTERS.

SIDNEY HERBERT, one of Her Majesty's most Honourable Privy Council, Secretary-at-War, &c., &c., &c.

To .

BY virtue of the authority to me by the Queen's most Excellent Majesty in this behalf given, upon the good testimony and assurance which I have received of your loyalty, integrity, and ability, I do hereby nominate, constitute, and appoint you the said to be an army schoolmaster of the first class from the day of 185 , and to continue in the said office so long as I, or the Secretary-at-War for the time being, shall think proper. You are therefore carefully and diligently to discharge the duty of schoolmaster by doing and performing all manner of things thereunto belonging; likewise to observe and follow such orders and directions as you shall from time to time receive from the Secretary-at-War, or from the Commander-in-Chief, or from any other your superior officer according to the rules and discipline of war.

Given under my hand at the War Office, this day of 185 , in the year of Her Majesty's reign.

(iv.)—ROYAL WARRANT of 19th May 1863, regulatiug the present Position and Pay of Army Schoolmasters.

VICTORIA R.

WHEREAS it has been represented to Us that it is expedient to revise the Regulations hitherto in force in regard to the pay and position of trained army schoolmasters, and to confer upon such as shall be appointed superintending schoolmasters a commission with the relative rank of ensign;

Our will and pleasure is that the following rules shall be established:—

The rates of full pay shall be,—

	s.	*d.*	
Superintending schoolmaster on appointment	7	0	per diem.
Superintending schoolmaster after 14 years' service as trained schoolmaster, of which five years shall have been as superintending schoolmaster	8	0	per diem.
Trained schoolmaster ranking as non-commissioned officer next below serjeant-major, on appointment	3	0	„
After 2 years' service	3	6	„
„ 4 „ „	4	0	„
„ 6 „ „	4	6	„
„ 8 „ „	5	0	„
„ 10 „ „	5	6	„
„ 12 „ „	6	0	„
„ 14 „ „	6	6	„

The periodical increase shall however only be granted on the recommendation of the Council of Military Education to such trained schoolmasters of whom satisfactory reports are received, both in regard to general conduct and the management and conduct of their schools. Each year's service as assistant or fourth-class schoolmaster under the former Regulations being allowed to reckon as six months towards the above periods.

Time spent at the Royal Military Asylum in qualifying for appointment as trained schoolmaster, whether the candidates are from civil life or from the ranks of the army, is not to reckon for the above rates of increased pay; service from date of appointment as trained schoolmasters being alone admissible.

Superintending schoolmasters, who on promotion to that rank were in the receipt of 8*s.* a day, will be permitted to retain that pay, but without further increase.

The rate of half-pay or retiring allowance for a superintending schoolmaster shall in all cases be determined by the service which he may have rendered to the public as schoolmaster, or in any former military capacity.

If a superintending schoolmaster shall have served at least 10 years as a trained or superintending schoolmaster, he shall, in case of being placed on half-pay by disability or ill-health, duly certified by an Army Medical Board to the satisfaction of the Commander-in-Chief and the Secretary of State for War, be allowed half-pay according to the following scale, viz.:—

	s.	*d.*	
Ten years' total service, and under five as superintending schoolmaster	3	0	per diem.
Ten years' total service, with five years' service or upwards as superintending schoolmaster	4	0	„
Fifteen years' total service, of which five or upwards as superintending schoolmaster	4	6	„
Fifteen years' total service, of which ten as superintending schoolmaster	5	0	„
Twenty years' total service, of which five or upwards as superintending schoolmaster	5	6	„
Twenty years' total service, of which ten as superintending schoolmaster	6	0	„
Twenty-five years' total service, of which five or upwards as superintending schoolmaster	6	6	„
Twenty-five years' total service, of which ten as superintending schoolmaster	7	0	„
Every superintending schoolmaster who shall have served for an aggregate period of thirty years, of which five years or upwards shall have been as superintending schoolmaster, may, with the sanction of the Commander-in-Chief and Secretary of State for War, be permitted to retire on	7	6	„
Ten years as superintending schoolmaster, with an aggregate service of thirty years	8	0	„

In calculating the service for half-pay the whole of the period passed as a student in the training schools of the Royal Military Asylum will be excluded, but half of the service in any former military capacity will be allowed.

Schoolmasters when placed on the pension list will be entitled to pensions according to the following scale:—

	s.	*d.*	
After twenty-one years' service, during the last three years of which they shall have been in the receipt of the highest rate of pay	3	0	per diem.
After twenty-one years' service, and should they not have been uninterruptedly in the receipt of the highest rate of pay during the last three years	2	6	„

Appendix I. (G.) Army Schools, &c.

The cases of schoolmasters invalided before the completion of twenty-one years' service will be specially considered by the Commissioners of Chelsea Hospital.

In calculating the time of service of a superintending schoolmaster for half-pay or of a schoolmaster for pension, the whole of the period passed in the training schools of the Royal Military Asylum, as well as half of any former service in the army prior to his admission thereto, are to be deducted.

Given at Our Court at St. James' this Nineteenth day of May 1863, in the twenty-sixth year of Our reign.

By Her Majesty's Command,

De Grey and Ripon.

Instructions.

This form of report is to be used by the schoolmaster for his half-yearly examinations, and for the examination during the month immediately preceding the inspection by the Assistant Inspector.

If the inspection takes place less than two months after the half-yearly examination, the schoolmaster's examination previous to inspection may be dispensed with.

If the inspection takes place less than two months before the half-yearly examination, the latter may be dispensed with.

The report of the half-yearly examinations is to be sent to the Secretary of the Council of Military Education, and a duplicate to the Assistant Inspector.

‡ Troy weight, avoirdupois weight, long measure, and time measure will here be considered sufficient. Questions may be set in dry and square measure in the higher standards.

H.

From Superintending Schoolmaster
To the Officer Commanding

18

SIR,

I HAVE the honour to report that, in compliance with General Order visited the school of the under your command, at the times specified in the margin, and to submit for your information the following remarks, made in conformity with directions printed on the last page, on

(1.) The Instruction.
(2.) The Discipline.
(3.) The Time Tables.
(4.) The Schoolrooms and School Furniture.
(5.) The Organization and Management.

I have the honour to be,
Sir,
Your most obedient Servant,

on the
on the
on the

Adult school - at
Grown children's school - at
Infant and Industrial School at

REMARKS.

DIRECTIONS to be observed in making this REPORT.

Superintending schoolmasters will carry with them the note-books (with which they will be supplied) whenever they visit a regimental school, and they will enter in them their remarks upon (1) instruction, (2) discipline, (3) time tables, (4) schoolroom and furniture, (5) organization and management of the schools, as these come under their observation.

They will also record in them the precise time at which they entered and at which they quitted the schoolroom.

They will make use of their memoranda to complete their reports to the Commanding Officer. They will be careful to specify in their reports the particular schools which they visited (*i.e.*, whether adult or grown children, &c., &c.), and the time spent in each school. Under the different headings above enumerated they are to observe particularly on certain points, viz. :—

1. Upon the character of the Bible lesson given by the schoolmaster or schoolmistress. Upon the character of the secular lessons given by the schoolmaster and schoolmistress. Upon the character of the lessons given by assistants.
2. Whether the pupils are orderly, attentive, courteous, and (in children's schools) clean. Whether the business of the school is carried on with regularity and alacrity, and without undue noise.
3. Whether the schoolmaster and schoolmistress appear to possess proper authority, and to exercise it with firmness and temper. Whether the assistants appear to have a sufficient education themselves, and to have a fair knowledge in teaching; and whether they appear to exercise authority themselves, and to support that of the schoolmaster and schoolmistress efficiently.
4. Upon the cleanliness and state of repair of the schoolrooms. Upon the state of repair, sufficiency, and suitableness of the school furniture.
5. In what respects, if any, the arrangements of the school are contrary to regulations, peculiar, or unusual.

The special class receive instruction with the children of their respective classes during their attendance from 9.30 to 12 and from 2 to 3. The time table used for them from 12 to 12.45 and from 3 to 4 is the same as that fixed for adults attending during those times. The time table for the adults attending the voluntary evening school from 5.30 to 6.30 is identical with the adult morning time table.

(True copy.)

Aldershot, 24th November 1869.

Jno. Belling, B.A.,
Superintending Schoolmaster.

Time Table used in all Infant Schools at Aldershot.

Time.	Lessons.	Remarks.
9 to 9.30	Prayers and Bible lesson.	The monitress to receive instruction at the grown children's school from 9 to 9.30 and from 10.15 to 11.15. She must be present in the infant school from 9.30 to 10.15 and from 11.15 to 12.
9.30 to 10	Reading.	
10 to 10.15	Spelling.	
10.15 to 10.30	Arithmetic.	
10.30 to 10.45	Singing.	
10.45 to 11	Recreation.	
11 to 11.20	*Collective lesson.	
11.20 to 11.50	Reading.	
11.50 to 12	Roll call, singing, and dismissal.	

* Object lesson. Clock face and natural history alternately.

The above time table, drawn up by me for the purpose of making the greatest use of the monitress in the infant school, and approved by Colonel Gleig, has been in use in every school at Aldershot for nearly four years with the most beneficial results.

Jno. Belling, B.A.,
Superintending Schoolmaster.

Aldershot, 24th November 1869.

Librarian.

Examined by the committee and found correct,

President of Garrison Library Committee.

Appendix I. (J.)

Libraries and Recreation Rooms.

F.

Library and Recreation Rooms.

Report on the Garrison Library at of the and the Recreation Rooms

Library.

1. Whether the room is suitable, and the books kept in good order.
2. General remarks.

Recreation Rooms of the

1. Average daily attendance.
2. Whether the rooms are well warmed, lighted and ventilated, and comfortably furnished.
3. Whether the commanding Officer has any suggestions to offer.
4. General remarks.

Appendix II.

Soldiers' Institutes.

APPENDIX II.—SOLDIERS' INSTITUTES.

QUESTIONS AND REPLIES ON THE SUBJECT.

Questions issued by the Commission.

I. Will you be good enough to give, for the information of the Commission, a general account of the "Soldiers' Institute" or "Home" which is understood to exist at , explaining its objects,—its system of management, and the regulations under which it is conducted,—the means of instruction or amusement provided in connexion with it,—and the funds by which it was originally established, and is at present supported,—stating whether it is a Government, or a purely private institution?

II. Will you express your opinion as to the success of such institutions, their effects upon the habits of the soldiers, and the comparative advantages afforded by them on the one hand, and by regimental recreation rooms within barracks on the other hand?

III. Will you favour the Commission with any suggestions which you may think desirable on the subject of Soldiers' Institutes and recreation rooms?

The above questions were addressed to the following officers:—

Major-General Freeman Murray, Commanding the Chatham District.
Lieut.-General F. W. Hamilton, C.B., Commanding the Brigade of Guards.
Lieut.-Colonel A. Fremantle, Coldstream Guards.
Brevet-Colonel the Hon. W. H. Feilding, Coldstream Guards.
Lieut.-Colonel W. F. Seymour, Coldstream Guards.
Quartermaster J. M'Blain, 1st Battalion Scots Fusilier Guards.
Lieut.-General Sir Richard Airey, G.C.B., Governor and Commander-in-Chief at Gibraltar.
Major-General Guy, C.B., Lieutenant Governor of Jersey.
Lieut.-General the Hon. Sir J. Yorke Scarlett, G.C.B., Commanding the Aldershot Division.
Major-General D. Russell, C.B., Commanding the South-Eastern District.
Brevet-Colonel J. W. S. Smith, C.B., Commanding at Shorncliffe.
Major-General R. Rumley, Commanding in North Britain.
The officers commanding at Woolwich, Portsmouth, and Parkhurst.*

Chatham.

(i.)—Answer received from Major-General Freeman Murray, commanding the Chatham District.

Sir, Chatham, March 29, 1870.

In reply to your letter of the 23rd instant, I have the honour to forward, herewith, reports giving answers to the questions about Soldiers' Institutes forwarded with your letter.

Major Buckley, late district barrack master here, was the orginator of the Soldiers' Institute at Chatham, and I do not think that any more valuable information could be afforded to the Royal Commission than what is contained in the answers which he has given to the questions referred to.

I also forward reports from Colonel Thompson, commanding the Royal Artillery at Sheerness, and Colonel Rickman, commanding the 2nd depôt battalion, both officers of considerable experience, and in whose opinions I place great confidence. I beg to state that the detailed information called for about the Soldiers' Institute at Chatham, in question I., is given at length in Major Buckley's statement.

As regards questions II. and III., I fully concur in the opinions and suggestions of Colonel Rickman and Major Buckley, and have held the same opinions and advocated the carrying out of such suggestions, on several occasions since I took command of this district.

In support of my opinion that recreation rooms within barracks, when they can be provided on a fitting scale, are preferable to institutes outside the barracks, I beg to state that the number of non-commissioned officers and men of the Royal Engineers subscribing to the Soldiers' Institute here is 91, and the number subscribing to their recreation room within their barracks is 529.

The commandant of the School of Military Engineering informs me that one of the chief reasons for the preference thus shown is the fact of the men having access to their recreation room, without the necessity of putting on their belts, and having to dress to go out of barracks.

I believe that for the same reason the number of subscribers in the Chatham division of the Royal Marine Light Infantry diminished *very considerably* as soon as that division was furnished with a suitable recreation room within their barracks.

I have the honour to be, Sir,
Your most obedient humble servant,
Freeman Murray,
Major-General.

The Secretary to the Royal Commission on Military Education.

Enclosures accompanying Major-General Murray's letter.

Report from Major Buckley.

Sir, Chatham, 28th March 1870.

With reference to the particular information required by the Royal Commission on Military Education on the subject of the Soldiers' Institute at Chatham, I have the honour to state,—

1st. "*Its object.*"—This is explained on the annexed paper marked A., as originally suggested by me in the year 1856; and after repeated applications and the rejection from the annual estimates of the provision of a building for the purpose, the late Lord Herbert, when Secretary of State for War, obtained a grant of 2,000*l.* towards the cost of the erection of that portion of the Soldiers' Institute which comprises the library, librarian's quarter, reading room, and the non-commissioned officers' or committee room. The *constitution* of the Soldiers' Institute is fully explained in the letter marked B., from Sir Benjamin Hawes, the Under Secretary of State, to the secretary of the Institute, dated War Office, 28th November 1860.

2nd. "*The system of management and the regulations under which the Soldiers' Institute is conducted.*"—These are fully recorded in the First Annual Report herewith forwarded.

3rd. "*The means of instruction or amusement provided in connexion with it.*"

* From the answers received it appears that no Soldiers' Institutes now exist at these three stations.

As regards means of instruction, lectures and readings on a variety of subjects were given, as were concerts, and amateur theatricals, and operatic companies very frequently patronized; but after some years' trial it was found that they so interfered with the quiet and order that should prevail, where so many persons are engaged in reading, that it became necessary to discontinue them. Since then efforts have been made to provide, at the expense of the Institute, a lecture theatre, by the conversion of one of the two fives courts adjoining the Institute, but without success.

Another application for the same object, to convert F house into a lecture theatre, is now under consideration, and it is hoped will meet the approval of the authorities.

There is a billiard room, a game room, supplied with several large bagatelle tables, two covered American bowling alleys, and four covered skittle alleys.

3rd. "*The funds by which it was originally established.*"—The cost of the principal building and its several accessories, including internal decorations, the furniture and fitments, amounted to 5,500*l.*, of which the War Department contributed 2,350*l.*, the Lords Commissioners of the Admiralty 300*l.*, and the Council of India 200*l.*; collected from private sources 2,000*l.*

4th. "*The funds by which it is at present supported.*"—The members' subscriptions are sufficient to meet the incidental expenditure without annual subscriptions or donations.

5th. "*Whether it is a Government or a purely private institution.*"—*Not a Government one*, unless all the money expended upon it in its original outlay be repayed to the committee; *not purely private*, as although the committee have the sole management, it is subject to the approval of the commandant of the garrison.

The proceeds have been devoted to the improvement of the institute, and within the last two years no less than 210*l.* have been expended in this respect.

General Remarks.—The success which has attended the Soldiers' Institute may be attributed to several causes:—

1st. Its being *within* the walls of the barracks. The institutes at Gibraltar have failed in consequence of their being outside; that at the Isle of Wight from the same cause; and other institutes, such as that got up by the Rev. Carus Wilson, at Portsmouth, which had the religious element very prominently mixed up with it, as also those in Dublin and Woolwich—none of these now remaining.

A member of our committee visited that in Dublin, which was not far from the Royal Barracks, and in the evening when all the men were out of barracks, but not one soldier was there. He was met by a very sedate, and, as he said, gaunt figure, with a white necktie, and on inquiring why there were no soldiers present, he answered, "No, they will not come to be saved." I would myself desire that every soldier were a Christian soldier, but this is not the way to make him one.

In the constitution of the Soldiers' Institute no religious teaching nor discussion is allowed, the consequence is the Roman Catholics form a considerable portion of our subscribers, and their clergymen are among our warmest advocates and constant visitors; and it is very pleasing to see the smile of recognition that passes between them. If the religious element had been introduced, not one Roman Catholic would have entered the building.

2nd. The immense circulation of books,—more than those issued at Aldershot, where there are three times the strength,—I refer to the regiments of the line only, as the Royal Engineers and Royal Marines have their own libraries and recreation rooms.

I attribute this success to the extraordinary tact and perseverance of the garrison librarian, Mr. Thomson, who is also superintendent, and his constant attention to the wants and tastes of the readers; he spares no pains to make himself useful, and devotes all his time to meet their wishes, the library being open from 11 to 8, except at meal times. If all librarians were to adopt the same mode, a marked increase on the issue of books would be the result.

When I came to Chatham the issue was limited to a couple of hours on certain days, and the librarian's wife made use of the library as her laundry on the Saturday.

JOHN BUCKLEY, Hon. Secretary,
Late District Barrack Master.

The Major of Brigade,
District Office.

P.S.—As the Report for 1868 contains much valuable information, it is annexed.

SUGGESTIONS.

Since the Soldiers' Institute has been erected, reading and recreation rooms have been provided for every corps; and in every instance, I am of opinion, the provision made is superior to that which it was proposed to afford in the original design for new buildings. Having been one of the members of the committee on "Libraries, Reading and Recreation Rooms," I am aware of the opinions expressed by officers commanding every corps in Great Britain, and some colonial stations, and with, I think, five exceptions, all were against these rooms being connected with the canteen. Latterly the beer question has found more favour, but I have a very strong opinion on the subject, and think that if you wish to encourage the men to read, to be studious, and enjoy a quiet evening with their books and newspapers, the further from the canteen they are the better. Had beer been introduced at the Soldiers' Institute, it would have been a failure instead of a success.

It was agreed on committee that where Soldiers' Institutes were established in the barracks, they would be considered the reading and recreation rooms of the corps occupying those barracks, and as far as Chatham is concerned, there is no doubt that they have advantages that no other regiments enjoy; but, as I have shown, the said rooms cannot be used for concerts and theatricals. I would strongly recommend that a lecture theatre should be provided in every barrack, and where there are several regiments one would be sufficient for the whole. The constant notice in every military paper of these gatherings, with the object of providing amusement for the men, is a decided proof that wherever suitable accommodation can be obtained, it is at once taken advantage of. It is quite a mistake to suppose that a very large and necessarily expensive building is necessary. To ask for such is very certain of meeting with a refusal; but the conversion of a building that would hold 500 persons, or even less, is an easy matter, and can always be attainable.

The other means of affording the men amusement *inside* of the barracks is to establish what is known by them as the "Free and Easy." If we judge from the crowds of soldiers who are constantly to be seen at these resorts *outside* the barracks, we may reasonably hope that if they were provided for them within their barracks, they would be equally attractive; care being taken to cater for their tastes, and to make it, at the same time, more to their advantage to enjoy themselves inside, by the offer of prizes to such men as were most successful in contributing to the amusement of their comrades.

My scheme is detailed in the following Paper:—

"*Free and Easy.*"

With a view of affording the soldiers as much amusement and recreation as is desirable *inside* of the barracks, it is proposed to fit up a large room comfortably as a sort of "Free and Easy," where the men could enjoy themselves without the restraint they are under in the reading and recreation rooms, and at the same time within reasonable bounds.

If one may judge from what is to be seen everywhere *out of barracks*, this is the sort of amusement that is most popular among the soldiers, and if means can be devised to induce the men to spend their evenings in barracks, instead of resorting to public houses and dancing saloons, much good will result to the soldier himself and to the service generally.

With this object it is proposed that the following pastimes be encouraged:—

Dancing (musicians to be paid something).
Singing.
Music.
Recitation.
Slight-of-hand.
Feats of strength.
&c., &c., &c.

And as it would be a great inducement to bring the men together, and would incite them to compete for the prizes, a sum of from 1*s.* to 1*s.* 6*d.* for the first, and 6*d.* to 1*s.* for the second prize, might be given to those who had contributed most to the amusement of their comrades during the evening, or by their superior skill had gained them.

These prizes to be awarded by a committee of three, chosen in the beginning of the evening, the chairman having the casting vote, and to keep order during the meeting.

That the men should not have the opportunity of availing themselves of the attractions outside, and then come inside of the barracks to the "Free and Easy," the proceedings should close at the warning bugle for tattoo.

Here the beer can could legitimately have its place, and, with tobacco and pipes, would be provided from the canteen.

It is calculated that the profits on the quantity sold on the occasion would provide the means of giving the prizes; but if not, what better appropriation could be made from the canteen funds?

There are many clever parties who travel from place to place to gain a livelihood, and would gladly avail themselves of the opportunity of exhibiting their talents for a trifling consideration. In that case the amount of the prizes might be given to the individual, and any contribution from the audience would be money well spent.

A committee of officers who take an interest in such things, would cater for the amusement of the men, assisted by a sub-committee of themselves, and through them the wishes of the men as to the entertainments might be conveyed.

Quarterly, there might be a general gathering in the lecture theatre (where there is so necessary an appendage for the recreation of the men), and higher prizes might be competed for by the principal winners of the other prizes. At the same time it is not desirable that the same parties should be awarded more than a certain number of the lesser prizes, in order to encourage others to come forward, and thus induce constant competition. In the meanwhile, all would keep up their practice for the larger awards, and so occupy their time in barracks.

JOHN BUCKLEY, Hon. Secretary,
Late District Barrack Master,
Chatham.

A.

Barrack Office, Chatham, 4th April 1856.

SIR,

IN reply to the inquiry contained in the letter, herewith returned, dated Horse Guards, 2nd inst., submitted to me by the Commandant of the Garrison, I have the honour to state that there are no refectories established in any of the barracks at Chatham. As this subject, however, is connected with the comfort and interests of the soldier, perhaps it would be a favourable occasion to submit for the consideration of the authorities the scheme for the erection of a building in which the soldiers could meet and amuse themselves, read the papers and magazines, write their letters, listen to a lecture or concert, and have amateur theatricals occasionally; a place that would be conducted very much on the principle of a mechanics' institute, though of course subject to the visitation and control of the garrison authorities. Such an institution would be found of the greatest benefit to the private soldier, especially in a place like Chatham, abounding with every temptation to vice. At present the soldier, on leaving the barrack room, has, with the exception of the canteen, but one place to which he can retire, viz., the library, where, it is true, he can sit and read, but where you look for him in vain, as it has not sufficient attractions; he cannot play a game of chess, draughts, backgammon, dominoes, bagatelle, smoke his pipe, drink his cup of coffee, or make himself comfortable and really feel at ease and at home. Failing these inducements to detain him *within* the barracks, he goes to the low public houses, or the haunts of vice, and too frequently lays the foundation of future misery.

(Signed). JOHN BUCKLEY,
Barrack Master.

The Major of Brigade.

APPENDIX II.

Soldiers' Institutes.

Chatham.

B.

Chatham 2
887

War Office, 28th November 1860.

SIR,

WITH reference to previous correspondence relative to the proposed establishment of a Soldiers' Institute at Chatham, I am directed to acquaint you, for the information of the committee of the institute, that Mr. Secretary Herbert is willing to provide the sum of 2,000*l.* in next year's estimates as a contribution towards the erection of the building, subject to the following conditions, viz.:—

1. That the committee erect the building on the site proposed in Chatham Barracks.
2. That the War Department contributes 2,000*l.* towards its erection in April 1861.
3. That the War Department performs all periodical services, internal and external.
4. That the committee performs all repairs which are included in War Office Circular No. 540 for official houses.
5. That the furniture be provided and maintained by the committee.
6. That the Secretary of State for War has power to take the building into his own hands, on repayment to the committee of all money expended upon it as original outlay, reduced by any sums paid off out of the receipts, as hereafter specified.
7. That it be opened before the end of the year 1861.
8. That the committee elected by the subscribers have the sole management, subject to the approval of the commandant of the garrison.
9. That the proceeds be devoted to pay off the original subscriptions, or to the improvement of the institution, as the committee may decide.

The Commanding Royal Engineer has been authorised to give over the site of the building to the committee whenever they are ready to commence the works,

I am, Sir, your obedient servant,
(Signed) B. HAWES.

Major Buckley, Secretary,
Soldiers' Institute, Chatham.

REPORT FROM COLONEL THOMPSON.

Garrison Office, Sheerness, 29th March 1870.

I believe the success or otherwise of these institutes depends a good deal on local circumstances; for instance, there was one established at Gibraltar, which answered for a certain time and then had to be given up, as the men in the garrison would not frequent it. There is one still going on at Halifax, Nova Scotia, which answers exceedingly well. These institutes also depend on the corps in garrison pulling well together, which sometimes they do and sometimes not.

For these reasons I am rather in favour of *regimental* recreation rooms, which I have always found answer well; and, from their being inside the barracks, keep the men from going into the town to public-houses, &c.

The regimental recreation room attached to the Royal Artillery Barracks at this station is always well attended, and I am certain is the cause, to a great extent, of the men behaving so well here.

A. THOMPSON,
Colonel, Commanding Troops.

The Brigade Major, Chatham.

REPORT FROM COLONEL RICKMAN.

My opinion of Soldiers' Institutes is, that the one in Chatham Barracks is a success, but as it really combines recreation rooms for the 1st and 2nd depôt battalions, and is situated in the Chatham Barracks, it can hardly be taken as a fair sample, and I have had no actual experience of the working of any other.

I think recreation rooms within barracks infinitely more constituted to keep men out of the town and from frequenting public-houses, &c., than any institutes outside the walls; and I think the amusements recreation rooms and institutes afford decidedly tend to keep men out of mischief.

I understand, however, that few men of any other corps in this garrison frequent the Soldiers' Institute, all of these having recreation rooms in their own barracks. The *first point* is to have the attraction in barracks, so that men need not be dressed, &c.—which they must be in going to one outside—and that they can go in their spare time between parades, &c., &c.

Institutes and recreation rooms should have a large room attached to hold concerts and theatrical representations. A "free and easy club" should be instituted, and a bar. The profits on the sale of liquor at this bar would enable a slight remuneration to be given to either soldiers or civilians who performed for the general amusement; and under this head might be combined with the above, feats of strength, passages of arms, comic singing, legerdemain, &c., &c., all of which would greatly tend to amuse and keep the men from temptations offered in the towns, and which in the generality of institutes and recreation rooms cannot now be held, owing to their having no space or convenience for the purpose.

W. RICKMAN, Colonel, Commanding
2nd Depôt Battalion.

Chatham, 28th March 1870.

N.B. With reference to other amusements, I think those already provided amply sufficient.

W. RICKMAN, Colonel.

Guards' Institute.

(ii.)—ANSWER received from LIEUT.-GENERAL F. W. HAMILTON, C.B., Commanding the Brigade of Guards.

SIR,

Gun House, 29th March 1870.

IN reply to your letter of the 23rd instant, enclosing certain questions on the subject of the Soldiers' Institute now existing in the brigade of Guards, to which Lord Dufferin, chairman of the Royal Commission on Military Education, requests that I would favour the Commissioners with answers, I beg to state I shall have great pleasure in doing so, and I think I cannot give the Commissioners a more clear explanation of the origin and object of the same than by forwarding to you for their information a copy of the two last annual reports of the committee.

Its object and origin are referred to at page 4 of the annual report for 1868, and at page 10 of the annual report for 1869. Its ob...

Its system of management is explained in page 8 of the former, and pages 10 and 11 of the latter. Syste... manage... Mean... instru...

The means of instruction, beyond the use of a fairly supplied library, were limited to teaching certain trades, and facilities were afforded, and teachers supplied for teaching carpentering, &c.

Owing, however, partly to the constant duty of the soldier, and his consequent irregular attendance, as well as from the distance of the Institute from barracks, and the necessity of dressing in regimentals previous to going to work, the attempt to teach trades has failed; *see* bottom of page 7 and page 8 of report of 1869.

The means of amusement are various and are the chief attraction of the Institute. Commodious billiard rooms with four tables, bagatelle tables, bowling alleys, &c. are afforded; but the evening meetings and dances, theatricals, and concerts which the several ranks give for their own and their friends' entertainment, are the principal causes of the popularity and success of the Institute. Means... amuse...

The funds to defray the original expense of the building, which amounted to about 18,000*l.*, were raised as follows:— Funds...

Above 5,000*l.* subscribed by officers and their friends, 10,000*l.* borrowed by them at different rates of interest, amounting to an annual charge of 430*l.*, and a grant of 3,000*l.* from Government.

The funds to defray the current expenditure are derived from subscriptions of members and from the surplus derived from the sale of beer and provisions at the bar. Curren... receip... expen... ture.

Those funds are found sufficient to cover the charges for taxes, lighting, servants, and everything connected with the establishment; but they are not sufficient to pay the interest of the money borrowed, which is annually defrayed by the officers. The annual charge for interest is now somewhat reduced by further donations towards paying off the capital, and by loans at a lower rate of interest. Inter... sums ... rowed.

It is purely a private institution, towards which the Government have paid 3,000*l.*

The objects of the founders of the Institute have not been completely realised. The success of a similar Institute, though not on so large a scale, was found so great in Canada, when a brigade of Guards was in that country, that a wish was expressed to found a similar Institute on their return home; but the number of friends that the soldier has in London does not allow such an Institute to be resorted to in the metropolis so much as it may be abroad, excepting for the evening entertainments; these are all very respectably and well conducted, but it is a question with some officers whether it is worth maintaining an establishment of such magnitude for the sake only of these evening meetings. Succe...

The good conduct of the members is perfectly maintained without any superintending control. The men are proud of their Institute, and of introducing their friends to it, and they are anxious to show that they are themselves worthy of it. So far it is successful.

The argument of those in favour of maintaining it, at all events for some years longer, is that it cannot be expected to make any immediate change in the habits and customs of so large a body of men, and that having laid out large sums in the establishment of such an Institute, it would be a pity to close it, without giving it every chance of future success, and a longer trial to judge of its effects on the character and conduct of the men generally who frequent it.

With reference to the 2nd question of the Commissioners, as to the comparative advantages of an Institute out of, and of recreation rooms in barracks, I would venture to observe that I consider it a very great advantage to the soldier that he should have the use of the latter rooms in barracks, where he can spend his time when he leaves the barrack room without having the canteen only as a place of resort.

I do not think the Institute is antagonistic to the recreation rooms, but I consider the latter *in* barracks of primary importance.

The Institute is of advantage as an inducement to the men, when out of barracks, to go to, instead of to the low pot-houses.

Where there are Institutes I consider it essential that the men when in them should be as free from military control as is consistent with discipline, for it often happens that the object of a soldier in going to a public house instead of

to the canteen is that he is relieved for the time from military superintendence.

If it is proposed to introduce the teaching of trades to soldiers, I consider it desirable that it should be done in a building in or in the immediate neighbourhood of the barracks, but rather in them, in order that the men may be enabled to go direct from their barrack rooms to their workshops without dressing in regimentals, and without any unnecessary loss of time. I think such a plan would facilitate their attendance.

I have, &c.
FRED. WM. HAMILTON.
Lt.-General,
Commanding Brigade of Guards.

The Secretary,
Military Education Commission.

(iii.)—ANSWERS received from LIEUTENANT-COLONEL A. FREMANTLE, Coldstream Guards.

II. I append hereto an extract from the second annual report of the Guards' Institute. I wrote it myself and consider it a fair exposition of the amount of success attained by the institute.

"The Guards' Institute having now been in existence "two years the committee are able to present a reliable "report with regard to the result.

"As a place of resort for work or instruction it has "failed; as a place of amusement and entertainment, and "in developing in the soldiers a capacity for self-control, "it has proved in many ways successful, beyond the antici- "pation of its most sanguine promoters.

"Every endeavour has failed in getting the men to work "at and to learn trades, and the result of these efforts goes "far to make it doubtful whether in a city which offers so "many inducements to pleasure as the Metropolis, soldiers "will be willing, under almost any circumstances, to "submit themselves voluntarily to continuous work.

"There can be no doubt but that the vast majority of "soldiers are indisposed to labour, to avoid which many "of them have enlisted; but, on the other hand, they are "much inclined to spend their time, when off duty, in "amusement and recreation.

"However comfortable they may now be made in "barracks it is natural for them to go outside for the "enjoyment of the society of their friends, and the large "majority of non-commissioned officers and many men may "resort to places known to be respectable. It is, however, "notorious that from considerations of expense, and still "more from the prejudices of the middle classes, great "temptations are put in their way to frequent houses of the "lowest description; and it is as the antagonist of those "houses that the Guards' Institute must stand or fall.

"The men of the brigade are here given a respectable "place where they can, without any more restraint than is "absolutely necessary in all decent houses of entertain- "ment, amuse themselves in company with their friends. "Dances, theatricals, concerts, billiards, cards, &c., &c., "are provided and are appreciated; and subscribers and "officers interested in the subject are earnestly requested "to visit the building on Wednesday or Friday evenings, "when they may contrast the good order and respectable "behaviour of from 250 to 300 persons of both sexes with "the dissipation and ill conduct known to go on in many "other places.

"During the two years these entertainments have been "in progress no policeman or patrol on duty has ever been "inside the building, and so much cannot be said of any "other place in London where public amusements on a "similar scale are provided.

"So good has been the conduct of the men and so great "their self-control that the committee have been enabled "to relax the rule against the sale of spirits, and no bad "result has followed.

"The committee feel themselves justified under these "circumstances in expressing to the officers of the brigade "of Guards their strong opinion that, in spite of the failure "of the undertaking in regard to the workshops, &c., the "Guards' Institute cannot but have the effect of raising the "social position of the soldier and of increasing his self- "respect, whilst it offers to the agricultural recruit on his "first arrival in London a respectable place of resort "instead of those disreputable houses in which he has "hitherto so often become initiated in all manner of vice, "crime, and disease."

III. I consider that this question must be regarded in a different light when applied to the Guards in London and to other soldiers elsewhere.

The biggest city in the world with the smallest garrison in proportion to its size! Soldiers here—however luxurious their barracks may be made—cannot be kept in, for they have naturally the same desire for society, and especially for female society, which exists in other classes; and this can be gratified to any extent in the metropolis. But it is extremely doubtful whether they can be accommodated with propriety with female society inside the barracks.

On going outside they find themselves debarred from using the more respectable places of entertainment because it is notorious that prejudices exist in the middle and *upper lower* classes against the military profession. On the other hand the soldier finds himself courted and "treated" in the lowest and most disreputable houses.

It is difficult to imagine a state of things more demoralizing to the young agricultural labourer (*the class from which the Foot Guards are most properly recruited*) on his first arrival in London.

The Guards' Institute has a strong tendency to remedy this evil. I have constantly attended the balls, dances, "free and easy's," and theatricals, and it is creditable to observe the respectable conduct and real enjoyment which prevail.

I consider that this costly experiment, though it has not turned out the "temple of industry" which its too sanguine promoters hoped it would, has yet had a humanizing and civilizing effect upon the guardsman as a high-class place of recreation and amusement.

ARTHUR FREMANTLE,
Lieutenant-Colonel and Captain,
25th March 1870. Coldstream Guards.

(iv.)—ANSWER received from BREVET-COLONEL THE HONOURABLE W. H. FEILDING, Coldstream Guards.

(1.) I trust that it will be conceded, as a true and sound principle of military economy and administration, that, inasmuch as the proportion of venereal disease, drunkenness, and its attendant military crimes, is in inverse ratio to the amount of rational and healthful amusement afforded to the soldier, so it would be wise to place within his reach the means of raising himself, by education and by habit, to a higher position in the social scale, than that occupied by him prior to his enlistment.

(2.) In fact, gradually to wean him from the pursuit of those animal pleasures, which, not only tend to military and civil crime, but also lead to an impaired constitution, and diminished physical powers of endurance.

(3.) It is in view of these principles that I should wish to see the present system of regimental (and garrison) canteens, recreation rooms, libraries and gymnasiums, modified and altered.

I should recommend that wherever practicable, the canteen be made the adjunct to an establishment combining the rooms for recreation, the library (or rooms for intellectual developement), and the gymnasium (or room for physical improvement and healthful exercise).

(4.) No one can expect a man, when he changes his smock frock or mechanic's dress for Her Majesty's uniform, to change with it his habits.

(5.) The class from which the soldiers are usually drawn, have been in the habit of looking forward to Saturday, not so much because it enables them to handle their week's wages, but because it provides them with the means of passing their Saturday night and Sunday in the enjoyment of the animal pleasures of women and drink. It is useless therefore to deny that, as the former of these must be tolerated, so we must look on the latter as a necessary evil. It remains to counteract the effect of both; and I cannot but think that, by providing the soldier with physical and mental amusement in barracks, without his being obliged to be buttoned up in his uniform, and at the same time providing him with the same class of refreshments as he would obtain at public houses (only of a superior description and at a smaller cost), there would be less temptation to low company, and less risk of drunken habits being acquired, and disease engendered.

(6.) By making the canteen the adjunct of, or supplement to, the recreation establishment, you will be able to induce the soldier to amuse himself and drink; rather than to drink to amuse himself, as is more frequently the case at present.

(*a.*) In every large barrack therefore I would wish to see one building containing a bar for refreshments of all kinds, (*b*) and on one side of this a theatre with two bar openings, (one for privates, and one for non-commissioned officers); (*c*) whilst on the other side were rooms for billiards, smoking, and conversation, (*d*) for refreshment, (*e*) and for reading and writing. (*f.*) Adjacent to the canteen should be the ball and skittle alleys, (*g*) racket and fives court, all with bar openings. (*h.*) The gymnasium should be close to the canteen, with a covered communication

APPENDIX II.

Soldiers' Institutes.

Guards' Institute.

leading from one to the other, (*j*) and with a gallery for spectators. (*k.*) In this gallery refreshments should be allowed. (*l.*) The buildings should be all lighted with gas, so as to be available during the dark winter afternoons and long evenings. All soldiers who have passed a certain stage in the gymnastic course should be allowed to use the building, but not otherwise. This would induce a greater wish for proficiency amongst the soldiers, and thus improve their physical development.

(7.) It will be observed that the item of expense is treated very lightly. My reasons for so doing are as follows:—(a.) That by raising the soldiers morally and intellectually you will decrease crime, and therefore diminish the number of culprits rendered inefficient by reason of imprisonment. (b.) That by encouraging the soldier in healthful amusements, and by providing him with wholesome refreshments you render him physically and constitutionally stronger, as well as withdraw him from the temptations to contract venereal disease through contact with the low women frequenting the houses wherein the soldier now seeks refreshment and amusement; thus the hospital expenses are reduced, and the number of invalids discharged to pension materially diminished.

(8.) In order to make this system complete I should wish to see it administered financially as one entire business.

(i.) The committee should have large powers of discretion vested in them.

(ii.) A great portion of the profits arising from the sale of refreshments should be spent in increasing the materials for amusement and education contained in the establishment, such as the purchase of books, newspapers, &c., &c., the purchase of furniture, the hire of musicians when necessary, the provision of scenery, costumes, or other theatrical adjuncts, &c., &c.

(iii.) The money made in the refreshment department should be divided into four parts, and accounted for in the following manner:—Two parts towards the increase of amusement and comfort in the building.

One part for the benefit of the soldiers of the regiment or corps using the building.

One part as a reserve to meet any loss which might unexpectedly arise.

(9.) From the above remarks it is plain that The Brigade of Guards' Institute does not at present reach the standard of perfection at which I aim. This may be accounted for in the following manner:—

1stly. Its site (Francis Street, Westminster) is too distant from any barrack, and thus the soldier is compelled to dress himself in order to reach it, and has, moreover, if coming from the Wellington or St. George's Barracks to pass through localities full of temptation to him.

2ndly. That owing to the heavy debt (nearly 9,000*l.*) with which the Institute is saddled it is unable to assist *with funds* any attempt at theatricals, concerts, or dances which the members may wish to set on foot.

(10.) It is my earnest wish that the administration of the canteen system in *The Brigade of Guards* should be worked as a whole by one committee, who should be permitted by the authorities, where practicable and advisable, to erect, in connection with the canteen, the buildings necessary for carrying out the system recommended in this paper.

(11.) This could in a great measure be carried out by the funds obtainable by the sale of the present building, and could gradually be completed by the administration of the profits as suggested above.

(12.) Much needless expense and trouble would be avoided and both the tax-paying public and the soldiers would be the gainers.

W. H. FEILDING,
Colonel,
Coldstream Guards.

April 18th, 1870.

(v.)—ANSWERS received from LIEUT.-COLONEL W. F. SEYMOUR, Coldstream Guards.

II. The success of Soldiers' Institutes depends mainly upon where they are placed. For instance, at Montreal, at Gibraltar, at Parkhurst, and at Chatham, where the seductions of public houses are not too great, they have been reported as extremely successful; whereas in London, the Guards' Institute has failed in some respects to fulfil its original intention, viz., as a place of work and instruction to which soldiers may repair *when out of barracks;* and I may here say, that the chief reason for such an institution *out of barracks* was to induce men who were known to spend many idle hours in public houses, to enter a building where they would be free from the forcible persuasion to drink, that must of course exist in every public house kept for the profit of its owner, to the robbery of the guest; and it is well known that in large towns, however comfortable the recreation and reading rooms may be made, it is impossible to persuade soldiers from going out of barracks, when free from duty, especially the agricultural class, from which the brigade of Guards is mainly recruited, who view the seductions of the metropolis with a far more envious eye than those who have passed their lives in towns, and once out of barracks, it is rare that soldiers will re-enter before tattoo. Then, probably, they have fallen into hands which make the return to barracks a most doubtful one, until their money is exhausted.

I have also known an uneasy feeling created, that if in barracks they are liable to be called upon by an over-officious non-commissioned officer for any sudden or casual fatigue duty.

There is also the wish to make acquaintances, which they see is to their elder comrades a matter of great facility, whether to their advantage or not is doubtful.

I would respectfully refer the attention of the Royal Commission to the reports of the Guards' Institute published in 1868 and 1869, showing that, although unsuccessful in some points, in many others it has come up to the anticipations of its promoters.

The greatest cause of regret to the committee was the failure of trades, and they can attribute this to nothing but a decided indisposition in the soldiers to work or to learn trades in the presence of so many surrounding pleasures as London affords.

A master was paid to teach; work was provided as well as tools, and a few men (about 20 out of 2,000 available) actually began earning money from the commencement, owing to the Royal Engineer Department giving orders for barrack work, which was tardily accomplished by these few men. In short, I believe it impossible that trades could be tried under more advantageous circumstances, except in one particular, viz., that the men had to dress in order to get from barracks to the Institute; but then again the workshops in the barracks at the west end of London, established by some commanding officers, have failed in attracting the men, and even soldiers known to be married without leave have preferred an idle life to one placing before them every means of obtaining bread for their families.

I may here mention, that at this moment any member of the Institute may work in the room, with the use of a very large and valuable collection of tools (the gift of an officer in the brigade), but no one avails himself of this boon.

A tailor's shop tried on the same principle also failed.

At Montreal men of the same regiments had eagerly availed themselves of far fewer facilities to work in the Institute that was established there in 1863–4; and one great feature was noticed in Canada, viz., that the Institute was the means of promoting the greatest concord between the various arms of the service that were assembled in garrison at that time; and this would always, I think, prove the case in large districts, when the superior comforts of an Institute would counterbalance the evils of particular public houses attracting special regiments, and thereby fostering jealousies that have at times led to serious consequences.

III. In answer to Question III. I beg to suggest the following as requirements for an Institute:—

1. That it should be situated in the most central spot of the garrison. Should the neighbourhood be low, the character of such an Institute must be its protection against improper contiguity, and it will more probably be the means of attracting the young soldiers.

2. The rooms should be airy but not too large, as in winter soldiers are more ready to come and sit round fires in different groups than they are to assemble in large rooms without an object.

3. Billiard rooms and skittle alleys. The former separate for non-commissioned officers and privates. This has been found to work well, as the serjeants can now play this game without frequenting houses either too expensive, or where they are liable to be mixed up with the private soldiers—an evil which is now, I think, fully recognised in the army.

For the same reason the coffee rooms should also be separate, leaving only the library and concert room common to all.

4. Lecture room, to be used also for theatricals and concerts.

Too much encouragement cannot be given to soldiers to devise amusements for themselves; when left entirely to their own resources, they are ready to organise entertainments, &c., and rarely has the committee of officers at the Guards' Institute been obliged in any way to interfere.

5. A workshop for carpentering and tailoring, when none exists in barracks, and, if space affords, a forge in the yard teaching horse-shoeing and iron-work. Basket and mat making take up but little room, and are easily taught.

6. Liquors and provisions *of all sorts* to be provided.

The committee of the Guards' Institute were for some time averse to allowing the sale of spirits, but they have had the satisfaction of seeing no evil effects whatever from their introduction; in fact, one of the most creditable points of the Institute is the *almost total* absence of drunkenness that has prevailed since the establishment was opened, and the exceptional cases have been invariably expelled by the members themselves.

In conclusion, I beg to state that while thoroughly advocating the establishment of Institutes, I would in no way lessen the comforts of recreation and reading rooms in barracks.

I do not think one will ever interfere with the other.

With short enlistment in prospect, it is in some quarters deemed probable that a different class of men will be attracted to the army. Should this ever be the case, Institutes ought naturally to be preferred by these men to the public houses, and perhaps the literary taste now found wanting would take life in the more educated mind of the new recruit.

W. F. SEYMOUR,
Capt. and Lieut.-Colonel Coldstream Guards,
Hon. Secretary Guards' Institute.

March 28, 1870.

(vi.)—ANSWER received from QUARTERMASTER J. M'BLAIN, 1st Battalion Scots Fusilier Guards.

Beggars Bush Barracks, Dublin,
SIR, 28th March.

IN reply to questions relating to "Soldiers' Institutes," I beg to observe that—

In my opinion, such institutions as the Guards' Institute will never be a success in large towns—that is, used by a good per-centage of the troops, and self-supporting—the men having such opportunities of forming acquaintances in civil life, and there being so many other attractions to take their attention. Once out of barracks, the general idea is, (with the exception of theatrical and concert nights), get away from soldiering, and everything belonging to it. Lectures and readings the men do not seem to appreciate; they attended on those occasions in very poor numbers indeed, though both lectures and readings were made very attractive.

One of the most important features in the plan of the Guards' Institute—to withdraw men from the low houses so much frequented by soldiers, and, by giving him something interesting to do, to let him earn wages, in addition to his pay—has signally failed, although the most strenuous exertions were made by officers, and many non-commissioned officers, to induce men to work at their trades there, and for others to go there and learn trades.

In my opinion, in addition to the general idea described above, there is another cause, viz., the trouble of dressing to go out. This trifling cause deters many men from even going out for a walk when off duty. Also the fact that men who work must do so in what we term "swabbing clothes," (an extra suit of which they would require at the Institute), or spoil their parade dress.

If workshops, in fact "Institutes" on a small scale, were generally adopted in barracks, I believe *in time* they would become a success, not only as regards men who already know trades, but for the purpose of affording instruction to men to learn trades. Many men would work for a few hours at the beginning, who would afterwards take a liking for the craft they practised, but who would not tie themselves for a week at a time, or even a day at first.

The benefits derived from the Institute being so little appreciated, I have observed no difference in the habits of the men (with the exception of those forward spirits, who lead in most things in the regiment, learning the art of management).

I believe the regimental recreation rooms, under the system in use in this battalion, with a very little extra help in cash, and of course extra accommodation, would furnish all that is required. We have the serjeant-major as permanent president, and two men from each company as members of the committee; the members being chosen by their companies. The serjeant-major knowing all the "ins and outs" (if I may be permitted the expression) of the battalion, and being in constant communication with the commanding officer and adjutant, is able to advise the committee on numerous small matters (which are important as a whole); that anyone else could not do, from lack of information. This system I should think capable of very great extension.

I also beg to observe that the recreation rooms, as at present constituted, should be furnished with a more liberal supply of fuel. During the period (five years) I was president of the committee, I do not remember a cold week during which we had not to purchase coal with the funds which ought to have been used for the purchasing of books, &c.

To successfully compete with the houses outside barracks for the company of the men, the recreation rooms should be made as attractive as possible. Walls should be plastered and coloured or papered (not brick and whitewash, as mostly at present), with a few good prints on the walls. Chairs should be used instead of benches, and iron-trestled tables should be discarded. A plentiful supply of good coffee and tea should be always ready, with other light refreshments.

I have the honour to be, Sir,
Your most obedient servant,
J. M'BLAIN, Quartermaster,
1st Battalion Scots Fusilier Guards.

The Secretary,
Military Education Commission.

(vii.)—ANSWERS received from LIEUTENANT-GENERAL SIR RICHARD AIREY, G.C.B., Governor and Commander-in-Chief at Gibraltar.

I. The Soldiers' Home at Gibraltar, established in 1859, ceased to exist in 1865.

It consisted of three branches—one being in the town, one at Rosia, and one at the north front camp—supported by a subscription of 4*d.* per month from each member. Indoor instruction and amusements were provided, also refreshments, excluding all intoxicating drinks.

The number of subscribers in 1860 amounted to 2,300, but subsequently, as regimental recreation rooms became established in the different barracks, fell off to a few hundreds, and the funds thus became inadequate for the support of the Home.

II. The soldier prefers the regimental recreation room, which is placed within his barrack close at hand, to an Institute usually situated in the town outside. The one he can readily frequent without restrictions as to dress, &c. necessary in getting to the other. At stations where regimental recreation rooms exist the number of members would not, except in very exceptional situations, be sufficient to support an Institute. I am, therefore, of opinion that the advantages resulting from the establishment of the former are greater than those from the latter, and that recreation rooms should be encouraged in preference in every way.

III. Commanding officers generally complain that the furniture allowed to recreation rooms is insufficient, and that to make the rooms comfortable and attractive it is necessary to supplement the barrack allowance from the regimental funds, by the purchase of additional furniture thus increasing the amount of baggage to be carried about by regiments from station to station.

RICHARD AIREY,
Gibraltar, Lieutenant-General Commanding.
April 12th, 1870.

(viii.)—ANSWER received from MAJOR-GENERAL GUY, C.B., Lieutenant Governor of Jersey. St. Heliers.

Jersey,
SIR, 8th April 1870.

In reply to your letter of the 24th ultimo, I have the honor to state that the Soldiers' Institute which was established in Jersey about the year 1863, ceased to exist several years ago, in fact it does not appear to have lasted more than 12 months. The Institute consisted of a few rooms which were hired and furnished in the town of St. Heliers, by private subscriptions among the officers of the garrison; at first all intoxicating liquors were excluded, but were subsequently admitted, when in reality it became a public house. The object for which the Institute was established having entirely failed, viz., the withdrawal of soldiers from the public houses and other objectionable places of resort, this failure was considered due to the locality of the Institute in the immediate vicinity of houses where every inducement of a disreputable character was held out to attract the soldiers.

As to the advantages arising from the establishment of a Soldiers' Institute, I feel convinced that if properly managed and judiciously situated, that is to say, out of a town, and either within, or closely adjoining the barracks, such an establishment could not fail of success; I have always found this to be the case, and with regard to recreation rooms I can affirm from my own experience, that they are regarded by the great majority of soldiers as

Appendix II.

Soldiers' Institutes.

St. Heliers.

a substantial boon, affording the means of instruction, amusement, and comfort.

The following is an extract from a report on this subject by Colonel McKinstry commanding the 2nd Battalion of the 17th regiment.

"An institution of this kind was established at Halifax, "N. S., which succeeded admirably; there was a gymnasium, "skittle alley, theatre, and recreation room, with refresh- "ments and periodicals and various games, all connected "with the establishment,

"The soldiers could move from one branch to the other "without restraint or being buttoned up, and frequently "with their coats off, except during a performance at the "theatre, which for the time only interfered with the "gymnasium.

"The troops were for the foregoing reasons greatly "attached to the institution and thoroughly enjoyed "themselves.

"Any institution conducted on like principles would "be certain to find favor and support amongst soldiers."

There can, I think, be no doubt as to the beneficial effect of these institutions on the habits of soldiers, resulting in an immense advantage to the service at large.

I have the honor to be, sir,
Your most obedient servant,
P. M. N. Guy,
Major-General.

The Secretary
to the Royal Commission
on Military Education.

Aldershot.

(ix.)—Answers received from Lieut.-General the Hon. Sir J. Yorke Scarlett, G.C.B., commanding the Aldershot Division.

I. In answer to the first question relative to the Aldershot Mission Hall and Soldiers' Institute, I submit to the Royal Commissioner the document appended. (A printed Prospectus and copy of the Regulations of the Institution.) This institution is entirely a civilian institution, independent of any military control beyond the power which the general officer commanding has of placing any house out of bounds, and thereby preventing soldiers frequenting it.

II. With respect to the Aldershot Institution as above, I think it has been useful both to soldiers and their wives, and has kept many men from worse places, and improved the minds and manners of its frequenters. On the other hand there is no military control over the lecturers. The Government supplying religious instruction to every denomination in camp through their respective chaplains, there is in my opinion no necessity for the religious instruction being given to them at the Mission Hall, and there is some danger that weak minds may be acted on prejudicially.

As regards institutes under military control I have not had much opportunity of observing their effect, but I am of opinion that the recreation room is a much safer place as preserving military discipline, and giving a control over the amusements and publications introduced. The present recreation rooms are not equal to the requirements of a regiment, but are good so far as they go.

III. The possibility of Soldiers' Institutes becoming a place for discussing the acts of their superiors, and loosening the bonds of discipline, is the only evil of which I am apprehensive. In other respects the existence of an establishment where soldiers of different regiments may find amusements and refreshment of a better description than can be found in low public-houses and brothels is an obvious advantage. The recreation rooms at present are on too limited a scale, and the very fact of their being in barracks or camp, and under some military control, will make many men prefer inferior amusements, &c., in the town. The more convenient the recreation rooms and out-door amusements in camp and barracks can be made, the higher the tone of men's tastes will be raised, and the less evil influence the town will have over them. I should for these reasons prefer improving the regimental recreation rooms to institutions in the towns.

Probably the Commissioners are not aware that a second Soldiers' Institute has been founded by the Wesleyans in Aldershot, which I believe to be very respectable and well conducted, but from which I have withheld any patronage, not considering it right as commanding the troops of all denominations to give my name to any denominational institution.

J. Yorke Scarlett,
Lieut.-General,
Commanding Division.

(x.)—Answers received from Major-General D. Russell, C.B., Commanding the South-Eastern District.

I. The Dover Soldiers' Home is a purely private institution; it was established and is supported by voluntary contributions; it was opened on the 2nd November 1868, and its objects are:—

1st. To afford the soldiers of the garrison a place for the quiet study of God's Word, and for private prayer, and where the Gospel is daily read to any soldier desiring to hear it.

The Government provides ample means for recreation in barracks, but the soldier has hitherto had no place of retirement for solemn thought and for prayer, and it was to supply this want that the Dover "Soldiers' Home" was opened.

2ndly. The Home provides all the more beneficial uses of a club where the soldiers may write their letters, and read various periodicals, newspapers, and interesting books. Suitable light refreshment, such as tea and coffee, is provided by the Army Scripture Reader and his wife who reside in the Home.

Books are lent to the soldiers from a small library kindly presented to the Institution by the Dover Sailors' Home, where formerly a room was open to the soldiers, who, however, have discontinued to frequent it since the establishment of regimental libraries and recreation rooms.

Two furnished bedrooms are available in the Home, board and lodging being provided at a very moderate rate for the use of men on furlough and the relations of soldiers of this garrison on a visit to Dover.

II. These "Homes" are simply intended to supplement the regimental libraries and recreation rooms, and give the soldier what he cannot get from Government; and I am thankful to say that through their agency, wherever they have been established—and I should like to see one in every garrison town—many soldiers have been reclaimed, and are now an honor to a service which they formerly disgraced.

The model of the "Home" at Dover was the one established at Aldershot, mentioned in the 2nd and 5th reports of the Council of Military Education.

III. I have no further suggestions to offer regarding Soldiers' Institutes and recreation rooms beyond those I have already submitted,

D. Russell,
Major-General, Commanding
South-Eastern District.

Dover,
30th March 1870.

(xi.)—Answers received from Brevet-Colonel J. W. S. Smith, C.B., Commanding at Shorncliffe.

I. I joined at Shorncliffe on the 1st of this month, and am unable to give any information from my own knowledge or experience. I attach four printed papers relative to this Institute which afford the information asked in the 1st question. (Printed Prospectus and Rules of the Soldiers' Institute at Sandgate.)

I would only observe that the management may be said to be entirely in the hands of the manager, for although a committee forms part of the scheme of management, they appear to have no power, and their influence is confined to advising only when the manager may consider their interference desirable.

II. I have never had an opportunity of witnessing the operation and effects of such an Institute as this, but looking at its aim, and the means employed, I cannot have a doubt of its benefit, spiritual and moral, to those who frequent it. I see a difficulty in drawing a comparison between such an Institute and a regimental recreation room; both are useful for the purposes intended, the latter as a counter attraction to the canteen, public houses, dancing saloons, &c., the former appealing to soldiers as fellow Christians.

III. I have no suggestion to make, as I fear such Institutes as this must be left to private beneficence.

J. W. S. Smith, C.B.,
Colonel, Commanding at Shorncliffe.

April 13th, 1870.

(xii.)—Answers received from Major-General R. Rumley, Commanding in North Britain.

I. The enclosed memorandum regarding the Soldiers' Institute at Edinburgh has been furnished by the Rev. James Millar, who has been for many years garrison chaplain, and takes a lively interest in the Institute.

II. Judging by the number of soldiers of the regiment now quartered in the Castle who attend this Institute, viz.,

free, its success appears to be doubtful; but as no amusements are provided, the advantages afforded by this Institute are scarcely comparable with those derivable from the regimental recreation rooms within the barracks.

III. The regimental libraries and recreation rooms, from the construction of the barracks in North Britain, do not afford adequate accommodation for the number of subscribers: the soldiers notwithstanding appear willing to subscribe, and to avail themselves of the privileges; and there can be no doubt as to the advantages to be derived by thus encouraging the men to remain in their quarters, and to employ their leisure hours by the attainment of useful knowledge, and also to acquire sober, regular, and moral habits, instead of resorting to the public-houses and low haunts which are usually to be found in the vicinity of the barracks.

R. Rumley,
Major-General,
North Britain.

Enclosure accompanying Major-General Rumley's answers.

Memorandum respecting the Soldiers' Institute at Edinburgh, by the Rev. James Millar.

(1.) The Institute was established in consequence of the interest taken on behalf of soldiers in connexion with their services in the Crimea and Indian Revolt.

(2.) It has never been under any formal management, the gentleman who founded, and for ten years maintained it, relying on the person placed therein. It is now nominally under the care of eight gentlemen acting as a committee, viz.:—

General Wahat.	Major Pettey.
Lieut.-Colonel Davidson.	Findlay Anderson, Esq.
Lieut.-Colonel Young.	J. Holt Skinner, Esq.
Lieut.-Colonel Clarkson.	Captain M'Kenzie.

(3.) It is not a place for recreation—no amusements are provided. There is a select library, and is only used as a quiet retreat for reading, letter-writing, and religious meetings.

(4.) It was founded by the generous liberality of the late Mr. Douglas, of Cavers, a gentleman of ancient family, distinguished for his religious character and writings. Five hundred pounds were expended on the building, furniture, and library. Founded (I think) in 1856 or 1857.

(5.) It is an entirely private institution, and is maintained by contributions raised in her own circle, by the assiduous efforts of an officer's daughter.

(6.) It has at times been regularly and largely attended by men from the Castle, the recruiting staff, and by soldiers on furlough; the good fire, plenty of gas, books and writing materials, with quiet, rendering it an attraction and shelter to men seeking escape from the temptations around them out of barracks.

(7.) It does not appear to come into comparison with the regimental recreation room, and does not lessen the attendance there, or subscriptions to the garrison library; but, being free, comfortable, and retired, it offers a retreat to quiet and studious men in their spare hours, where they can have a cup of tea or coffee and be entirely by themselves, as it is not open to civilians.

APPENDIX III.—ROYAL MILITARY ASYLUM, CHELSEA.

A.—QUESTIONS AND REPLIES ON THE SUBJECT.

Questions issued by the Commission.

(A.) General Organization.

I. Will you be good enough to give, for the information of the Commission, a general account of the objects of the Royal Military Asylum, its present organization and staff, the mode and conditions of admission to the schools comprised under it, the number of pupils under instruction at each, the nature and length of the courses of instruction, and the regulations for the maintenance of discipline?

(B.) Normal School.

II. Are you satisfied with the present system for the training and appointment of army schoolmasters, or do you consider that it is in any respects capable of improvement?

III. Will you express your opinion regarding the present organization of the establishment, the position and powers of the staff and instructors, and the state of discipline among the pupils?

IV. Do you consider the accommodation afforded by the school in all respects satisfactory?

V. Will you favour the Commission with a brief statement of any suggestions which you may think it desirable to make in regard to the Normal School.

(C.) Model School.

VI. What is your opinion regarding the conditions and mode of admission to the school? Do you consider that any alterations in the present regulations on this subject are desirable?

VII. Do you consider that either the course or the method of instruction at the Model School is capable of improvement? If so, what alterations would you suggest?

VIII. Will you express your opinion regarding the present organization of the establishment, the position and powers of the staff and instructors, and the state of discipline among the pupils?

IX. Do you consider that the accommodation and messing provided for the pupils, and the general sanitary state of the school, are in all respects satisfactory; or would you suggest any improvements in these respects?

X. What is your opinion, derived from your knowledge of the subsequent careers of the pupils, regarding the results of the education given at the Model School, and the advantage of the institution to the service?

XI. Will you favour the Commission with a brief statement of any suggestions which you may think it desirable to make in regard to the Model School?

Of the above questions, Question I. was addressed only to Brevet-Colonel E. A. G. Muller, Commandant of the Asylum, and (with reference to the Normal School) to W. J. Reynolds, Esq., M.A., Head-master of that School.

Questions II. to XI. were addressed to:—
- Brevet-Colonel Muller, Commandant.
- Brevet-Colonel E. Adams, Secretary and Adjutant.
- Rev. G. W. Langmead, M.A., Chaplain.
- Major-General Sir F. Abbott, C.B., late Member of the Council of Military Education.
- Rev. Canon Moseley, F.R.S., Member of the Council of Military Education.
- Rev. G. R. Gleig, M.A., Chaplain-General to the Forces.

Questions II. to V. were addressed also to the Head-master of the Normal School, and Questions VI. to XI. to the Head-master of the Model School.

Question IX. was specially addressed to Deputy Inspector-General of Hospitals J. B. St. C. Crosse, Medical Officer to the Asylum.

(i.)—Answers received from Brevet-Colonel E. A. G. Muller, Commandant.

(A.) General Organization.

I. (*a.*) The object of this institution is to give an asylum and education to the orphan sons of the non-commissioned and private soldiers of the regular army, born in lawful wedlock, whilst their fathers are serving. Its present organization and staff consists of a commandant, a secretary and adjutant (one), a quartermaster and paymaster (one), a surgeon, and a chaplain, 1 serjeant-major, 1 quartermaster serjeant, 1 master tailor, 1 master shoemaker, 6 serjeants, 3 corporals, nurses, &c.

The mode and conditions of admission are divided into three classes—

1st. Complete orphans.

2nd. Those whose father is dead and mother living.

3rd. The father living and the mother dead.

The strongest cases are selected and submitted to the Commissioners at the quarterly boards to fill up vacancies as they occur, probably 20 per quarter.

The number of pupils under instruction at each school is as follows, viz.:—

1st school - - - -	92
2nd „ - - - -	85
3rd „ - - - -	84
4th „ - - - -	83
5th „ - - - -	114
Total - -	458

Appendix III. (A.)

Royal Military Asylum.

The nature of the course of instruction can be ascertained from the annexed list, which shows the subjects taught and the numbers in each case—

Religious knowledge - -	458
Reading - - -	458
Writing on slates - -	458
„ in copy books - -	435
„ from dictation - -	435
Exercises in composition -	285
Arithmetic, slate - -	458
„ mental - -	458
Geography - - -	343
English grammar - - -	343
„ history - - -	343
Vocal music - - -	313
Learning poetry - - -	230
Object lessons - - -	369
Euclid - - - -	30
Mensuration - - -	30
Natural history - - -	86
Model drawing - - -	58
Analyses of sentences - -	86

The average length of the course may be regarded as 4½ years or 5.

The boys are divided into six companies, superintended by the serjeant-major and six serjeants, under the direction of the adjutant. Defaulters are brought up to the office, cases inquired into and punishment awarded, in a minor way, the same as in a regiment.

(*b.*) The Normal School of this Asylum was established for the purpose of training persons for army schoolmasters. Candidates are either civilians or enlisted soldiers. The former must have been pupil-teachers, or certificated schoolmasters in national schools, and be above 20 or under 25 years of age. Both classes are admitted by competitive examination.

The students remain one year in the Normal School, at the end of which time, if they pass a certain examination, they pass to the Model School, where they are employed for six months in teaching the boys and in acquiring a knowledge of the army system of tuition; after which, if found qualified to conduct a school, they are sent to a regiment or depôt battalion.

The Normal School is also recruited by the admission of pupil-teachers from the Model School, who after staying there about three years, at which time they are usually 20 years of age, compete with the other candidates for the normal school. Whilst in the Model School these youths receive a daily allowance of 6*d.* or 9*d.* according to age; there are thirteen at present, one having joined two days ago.

The staff of the Normal School consists at present of two masters, but one of them will be discontinued after the present quarter. Drawing and music are taught by non-resident masters, and instruction in fortification by an officer of the establishment.

(B.) Normal School.

II. I do not approve of the Normal School. It is a most expensive establishment, and I think equally good instructors might be got from the different training schools, and sent here for six months, to be under the head master of the Model School to learn the nature and routine of army instruction, and thus save a great expense to Government.

III. The present organization of the Normal School, now reduced to one head master, and 28 students and pupil-teachers, is good. The powers sufficient for the numbers, and the discipline under one serjeant-major for that school is good.

IV. I think the accommodation for the students is satisfactory.

V. My answer to this question is replied to in No. II.

(C.) Model School.

VI. I do not think that the regulations for the admittance of boys into this institution can be improved; they are founded on strict justice to the orphans.

VII. I do not think the instruction at the Model School can be better than it is.

VIII. The present organization of this establishment with its staff and instructors I think very good, and so is the discipline among the boys generally.

IX. With reference to this question, by the advice of the Sanitary Board and general medical opinion, it is considered essential that each boy should have 600 cubic feet of dormitory; this we cannot attain in the present building and have its full strength of 500 boys. Thus to meet the difficulty until more accommodation can be made, we have been obliged, with the sanction of the Commissioners, to reduce the numbers to 458 boys, of which 120 boys have 600 cubic feet, and the remainder 500. The messing is very good; the sanitary state of the school, with the recent improved ventilation, is in all respects satisfactory.

X. In my opinion, based on the annual returns we receive from every regiment in the service of the conduct of each boy that has joined them, it is most satisfactory and pleasant to hear; the demand for these boys is continuous, thus showing how highly this institution is prized, and the great boon and advantage it is to the service generally.

XI. I have no suggestions to offer with reference to the Model School; I think the system of instruction there excellent.

Edward Muller, Colonel,
Commandant.

Royal Military Asylum,
28th February 1870.

(ii.)—Answers received from Brevet-Colonel E. Adams, Secretary and Adjutant.

(B.) Normal School.

II. If the Normal School is retained, I do not think the present system for training schoolmasters can be improved.

III. I consider the present organization to be good, and that the head master has ample power in all matters relating to the studies. The general conduct of the students is satisfactory.

IV. I consider the halls of study as well as the day rooms of the students to be quite satisfactory, but an improvement in the dormitories is required. At present there is no separation between the beds, and to give greater privacy I would recommend that each be enclosed by a wooden partition or one of corrugated iron.

V. I think it is desirable to reduce the minimum age at which civilian students are admitted from 20 to 19, and that the appointments be thrown open to general competition instead of being confined to such persons as have been previously engaged in tuition. By making these changes I think it possible that a better class and a greater number of candidates will come forward. I would also recommend that more attention be given to the general character of the soldiers who are allowed to compete for admission to the Normal School, and that none be under the rank of corporal or have less than three years' service.

(C.) Model School.

VI. I do not think it desirable to make any changes in the conditions and mode of admission.

VII. I consider that more attention should be paid to grounding the boys in elementary subjects, such as reading, writing, spelling, and simple composition, together with the first four rules of arithmetic and their compounds.

VIII. I am of opinion that the present organization cannot be improved. The course of instruction is superintended by the upper master, who has full power in all matters relating to the education of the boys, subject to the control of the Council of Military Education.

The masters have nothing to do with the discipline of the boys when out of school, which is entirely superintended by the commandant and the military staff. The conduct of the boys is generally very good.

IX. The messing is excellent, and the general sanitary state very satisfactory, but there is a deficiency of sleeping accommodation.

The medical authorities have stated that each boy should have a minimum space of 600 cubic feet, but if that was allowed the authorized number of 500 boys must be greatly reduced. In former years 400 cubic feet were deemed sufficient, and at present no boy has less than 500 feet, but to give that amount the numbers have been temporarily reduced to 458, although the Commissioners reluctantly sanctioned that reduction.

X. An annual return is received from every regiment, showing the rank and character of each individual now serving who was educated at this institution; and judging from those returns I am of opinion that the Royal Military Asylum supplies a number of excellent soldiers and is extremely advantageous to the service. As a proof of the estimation in which boys trained at this asylum are held, I would state that applications are constantly received from commanding officers for volunteers.

XI. I think the number of pupil-teachers unnecessarily great, and indeed that they might be entirely dispensed with by employing some of the elder boys as monitors to assist in teaching the very young children.

I would also suggest that the boys be instructed in the trade of a carpenter in addition to those of tailor and shoemaker. A knowledge of that business would render them very useful whilst in the army, and be highly advantageous to them after being discharged.

E. Adams, Colonel,
Secretary and Adjutant.

1st March 1870.

(iii.)—Answers received from the Rev. G. W. Langmead, M.A., Chaplain to the Asylum.

(B.) Normal School.

II. I consider that the present system of training and appointment of army schoolmasters is capable of improvement, and I have stated my views in answer to Question V.

III. The present organization of the Normal School I believe to be good; the head master is a very superior and well educated man, and has an admirable method of imparting knowledge. I consider that the three other masters, viz., the teacher in fortification, the music and drawing masters, are thoroughly equal to their work. The conduct of the young men, upon the whole, is satisfactory, but I think that they might be allowed less liberty than they have at present.

IV. The accommodation as regards the school and reading rooms is in all respects satisfactory. The rooms are large and airy, but I consider that the dormitories are capable of improvement, as suggested in answer to Question V.

V. In answer to this question, I would respectfully beg to say that I consider it would be desirable to admit more civilians as schoolmasters; there is now much difficulty in securing candidates from this class; only two or three present themselves at the half-yearly examination, but I think that this might easily be overcome by throwing open the examination to all civilians of good moral character of the age of 19, and not confining the selection as it is now done to "pupil-teachers who have completed their apprenticeship, and certificated schoolmasters, between the ages of 20 and 25 years," as at that time of life most young men have made choice of their profession.

I would also strongly recommend that no soldiers be admitted as students under the rank of serjeant, and that the strictest inquiry be made as to their moral character. By admitting soldiers *under* this rank, not only is there a probability of having an inferior class of men, but when they return to the service and take their position as schoolmasters next to the serjeant-major, jealous feelings may be engendered amongst those who held superior rank to them before; and thus their efficiency may be impaired, and they will not command that respect which ought to be paid to them.

I would also take the liberty of mentioning another regulation, now in force, which I think prevents many good soldiers from offering themselves as candidates for army schoolmasters; I allude not only to the fact of their services, previous to their admission, being reduced one-half, but that during the period they are under instruction in the Normal and Model schools their time does not count at all towards a pension; perhaps there is no regulation which tends more to prevent good soldiers from coming forward as candidates than this one.

I consider that it is most essential that an alteration be made in the students' dormitories. No student now, who wishes to spend a short time in private devotion or meditation, has a place to which he may retire. I would therefore suggest that a partition, sufficiently high to screen them from one another, be erected between each of their beds, and thus that privacy would be secured which is so essential to the spiritual advancement and comfort of all well-disposed young men, and which would give them an opportunity, *in private*, of seeking that divine assistance which they so much need to enable them to resist the temptations with which they are surrounded.

I also consider that the students and pupil-teachers should not be allowed out of the institution after 9 o'clock in the evening on ordinary occasions, and that no night passes be granted, except in the case of sickness or death of any of their relations or friends, or on any great emergency.

(C.) Model School.

VI. I consider that the mode of admission to the boys' school is satisfactory, as the greatest impartiality is shown, and the most deserving cases are always selected.

VII. The instruction given in the Model School is of a superior character, and ably conducted under the upper master.

VIII. I consider that the present organization of the Model School is very excellent. The upper master is highly intelligent and thoroughly conversant with the duties of his office. He is ably supported by four masters of excellent qualifications, and the state of discipline in the school is good. Some of the boys are remarkably intelligent, particularly in the First School, and the upper master has a peculiar power of enforcing order, and is rarely compelled to have recourse to any very stringent measures.

IX. I consider that the accommodation provided for the boys and the general sanitary state of the school are satisfactory. Some of the dormitories are particularly spacious and airy.

X. The returns which are annually received from regiments respecting the boys who have left the institution are satisfactory. Some of them soon become non-commissioned officers, but so many are placed in the band of their respective regiments that their promotion is consequently retarded.

XI. I have no suggestion to make relative to the Model School, except that I consider it would be far preferable to employ students as teachers, instead of pupil-teachers, as the latter enter on their duties so young that they are obliged to remain at the institution for many years and associate with others much older than themselves, and are hereby exposed to many temptations and are liable to contract habits which it is difficult for them to overcome as they advance in life.

In conclusion, I would respectfully take the liberty of stating that, agreeably with the order that I received on my appointment as chaplain to the Royal Military Asylum, I have confined myself solely to giving religious instruction to the students, pupil-teachers, and boys, and performing all other spiritual duties connected with my sacred office, and therefore I have not, in any way, been connected with the secular instruction given in the Royal Military Asylum.

G. W. Langmead, M.A.,
Chaplain to the Forces, and Chaplain
to the Royal Military Asylum, Chelsea.

(iv.)—Answers received from Major-General Sir F. Abbott, C.B., late Member of the Council of Military Education.

(B.) Normal School.

II. If we could obtain a sufficient number of candidates on our present terms, I should consider the existing system of appointment to be very satisfactory; but the requirements of a candidate are so high that but few soldiers can be obtained. Men who can pass the examination for admission are pretty sure of promotion in the ranks. They would indeed be generally discouraged by the commanding officer from leaving the regiment. We are thus thrown very much into competition with civil schools, and our terms are not sufficiently good to attract men who have passed through the civil training colleges.

The education given in the Normal School is excellent. In Mr. Reynolds Government possesses a master of great and varied talents, and singularly qualified for the work. I do not remember any part of the course that I would alter, unless, perhaps, the substitution of practical geometry for mechanics.

III. The organization of the Normal School appears to me to be very satisfactory; as also do the position and powers of the head master and his assistant (I think there is only one); and when the commandant was a judicious officer the relations between the military and the civil authorities seemed to work well. I could not suggest any improvement.

Of the state of discipline among the pupils I am not qualified to speak decidedly. It always appeared to be as good as could be expected with reference to the locality of the school.

IV. The accommodation is, I think, abundant; but the position of the school in a very low neighbourhood is objectionable. It cannot, however, be detached from the Model School.

V. The only observations that occur to me regard the mode of appointment. I should recommend the nomination of pupil-teachers in the Model School, who should give some portion of their time in attendance at the Normal School. Something has, I believe, been attempted in this direction.

(C.) Model School.

VI. I cannot suggest any improvement in regard to the terms or mode of admission to the Model School.

VII. The course of instruction requires a thorough revision; at present the education is almost entirely mental; some few of the boys, it is true, are instructed in tailoring and shoemaking, and some few others learn music; but a great deal too much of the day is passed in the dreary round of scholastic exercises in the close, hot schoolrooms; while during the short intervals allowed for recreation the poor children are confined to small gravelled courts surrounded by lofty walls. This is totally opposed to all my notions of what a school ought to be; so that I

Appendix III. (A.)

Royal Military Asylum.

was not surprised to see the unfavourable result depicted in stunted forms and sickly countenances.

The alterations I have to propose are sweeping. If justice is to be done to these hundreds of children of our soldiers the school must be removed to the country. Half the educational day should be devoted to agricultural pursuits, drilling, gymnastics, &c.

VIII. The organization of the establishment, the position and powers of the educational staff are, I think, satisfactory. Mr. McLeod, the head master, is admirably adapted to the work; nothing could exceed his zeal and attention. The boys always appeared to me to be under excellent control.

IX. I have been obliged to touch upon this subject in my reply, No. VII. The bedrooms were crowded and ill-ventilated when I had personal knowledge of the schools. The messing was much improved under Colonel York's administration, but it is still, I think, susceptible of improvement; the meat rations were often very uninviting, and there did not appear to be sufficient discrimination used in adjusting the rations to the size of the boys.

X. Of the subsequent career of the pupils I have no personal knowledge.

XI. I have no further suggestions or observations to make in regard to the Model School.

F. Abbott,
Major-General.

(v.)—Answers received from the Rev. Canon Moseley, F.R.S., Member of the Council of Military Education.

(B.) Normal School.

II. The present system of appointing army schoolmasters is different from that which existed in 1858, and that difference shews itself in the constitution of the Normal School. The establishment of the Normal School on 1 December 1858 was 41 students, of whom 16 were from civil life, 13 were non-commissioned officers, 12 had served as monitors in the Royal Military Asylum or the Royal Hibernian schools.*

The establishment on the 31 March 1868 was 29 students; seven were civilians, 18 were soldiers, four were pupil-teachers. Whilst the whole number was reduced from 41 to 29, the proportion of *soldier* students was thus increased from 46 per cent. to 61 per cent.

The measures out of which this change has resulted, and to which I gave when they were adopted my entire concurrence, will be found stated in the Appendix to the First Report of the Council on Army Schools. Complaints were made to the Council that the regimental schoolmasters were unpopular with the commanding officers; that, having been for the most part unaccustomed to military discipline, they were not easily made amenable to it, and that certain distinctions in respect to uniform which placed them above the non-commissioned officers, together with the higher education they had received, of which they were said to be very conscious, were the cause of jealousies and heart-burnings, and made the relations with some of their commanding officers difficult and disagreeable.

The reversing of the proportion of soldier students from the less to the greater number, from 46 to 61 per cent., has been the result. It has arisen, 1st, from the office of army schoolmaster being considered now to offer less advantages to civilians than it did; 2nd, from the admission of soldier students being thereby rendered easier than it was; 3rd, from the office of 4th class schoolmaster having been abolished, through which office monitors of the Royal Military Asylum and the Royal Hibernian schools were passed on to the Normal School.

The object of obtaining a class of schoolmasters more amenable to military discipline has probably been thus accomplished; but it is not certain whether equally good schoolmasters are sent out into the army, and if this is not the case, the work of educating the army can scarcely be so well done.

The fact which has taken me by surprise, is that the soldier students who come up do not seem to be, as a class, above the ordinary standard even of a soldier's intelligence and energy of character, I mean, not of a class likely to take the lead among their fellow soldiers. They seem not to be the best of their class to be schoolmasters; the best do not seem to pick themselves out, and are not picked out by the officers, to be schoolmasters.

To this rule there is, however, as it regards instruction, an exception. There is a class of men of superior education and manners and gentle nurture who find their way into the army, sometimes by misfortune and sometimes by their own fault to whom the rough associations and the hardships of ordinary military life are unendurable and who prefer the schoolmaster's work. The proportion of this class of students is increasing. During the last two years there have been men in the Normal School, educated at Eton, at Cambridge, at Addiscombe, &c., &c., &c. They are not, in some respects, the best material out of which to form elementary teachers.

On the whole I think that a well-considered plan as a substitute for the 4th class schoolmaster scheme, by which head boys from the Royal Military Asylum and the Royal Hibernian school may be advanced to the Normal School, is desirable. Should the principle of compulsion introduced in the Government Education Bill be extended to adult education in the army, an increase of the establishment at Chelsea will be necessary, and the qualifications of the army schoolmaster will have perhaps to be raised.

III. The constitution of the Normal School is in this respect anomalous, that the Model School is independent of it, and not, as is the case in other Normal Schools, a subordinate part of its establishment. In the Normal School the students learn what they have to teach under one master, and in the Model School they learn to teach it under another; and the two masters are independent of one another. But they are not (except in one subject of instruction) under the authority of the one at *the same time when* they are under that of the other. They spend 1½ years in the Normal School, and then go for half a year or more to the Model School.

The system, although it appears bad on paper, and is different from that of other Normal Schools, does not, however work ill in practice.

The independence of the two masters of one another in no way interferes, as far as I know, with the efficiency of either in the discharge of his duties. It is a question indeed whether the arrangement is not *in itself* the best; certainly it would be no gain to the education of the army to secure a theoretical symmetry in the plan of the Normal School and Model School by sacrificing either of these masters to it.

I believe the head masters have no reason to complain of the discipline of the Normal School in school-hours.

As to the discipline out of school-hours, I have considered myself interdicted from making any official inquiries. I think, however, the neighbourhood a bad one for a Normal School, especially for one having so many soldier students. The necessary intercourse from without created by the boys' school is moreover unfavourable to discipline out of school hours.

IV. I do not consider the accommodation afforded by the Normal School satisfactory. The building was not, I believe, erected for its present use, and it is not suited to it. The lecture rooms are dreary places. There is no library or reading room. The students have no studies. Their dormitory is a large room in which their beds are arranged as in a hospital, without any of that privacy for each individual student which in other Normal Schools is considered indispensable.

(C.) Model School.

VI. There is no educational qualification required for admission to the Royal Military Asylum, as there is to the Royal Navy School at Greenwich, which stands in the same relation to the navy that the Royal Military Asylum does to the army.

Education is now so easily to be obtained everywhere, and especially in the army, that it would not be unreasonable to require that every boy admitted after he is ten years old should be able to read and write and work well the four first rules of arithmetic.

Parents who look forward to their children getting educated at the Asylum are not unlikely (for that reason) to be careless of their education before they go to it, to their serious injury.

VII. I know of nothing that can be changed with advantage in the *instruction* of the Model School.

IX. I do not consider the accommodation provided for the boys and the general sanitary state of these schools good. On this point I beg to refer to the evidence taken before a committee specially appointed to inquire into this subject, and also to my own report on the school in the Second Report of the Council on Army Schools.

Considerable improvements have nevertheless recently been made in the dormitories, the diet, and the clothing of the children; but I believe that no effectual remedy for the sanitary condition of the institution will be found until it is rebuilt in some other locality. The following facts are unquestionable.

* Col. Lefroy's Report, 1859.

1. The boys when they leave the Asylum at 14 years of age are, on the average, considerably* less in height and in weight than the boys who leave the Greenwich Hospital Schools at that age, and (which is more conclusive) they are yet more inferior in stature and weight to the boys of the Royal Hibernian School who leave at the same age.

2. The proportion of boys usually in the infirmary is exceptionally great.†

3. The number of boys who on their leaving are found unfit for the army is exceptionally great. The average of the eight years before 1868 gave 17 per cent., while in 1867–8 it was 21 per cent. In the Royal Hibernian School only 5 per cent. are returned, under the same circumstances, as unfit. The Hibernian School is erected on an open healthy site in Phœnix Park, Dublin. With the money for which the 10 acres (on which the Royal Military Asylum stands) at Chelsea would sell, a new and more commodious Normal College and Asylum might be built in the neighbourhood of the Wellington College on a much larger site.

I first inspected the school in the year 1849. New sanitary regulations were then made under the direction of Dr. Balfour,—the dormitories were altered, the diet was changed, and the standard of instruction in the school was raised, the present head master and the principal of the Normal School being then appointed.

I have not since inspected the whole institution, but only the part of it which is concerned with the instruction of the boys, the functions of the Council being limited to that. As the Commission invite suggestions with reference to the general well-being of the school I venture to suggest that *that* limitation should be withdrawn as it regards the Director-General of Education. Education is not limited to *instruction*, nor is it so understood by the public. It is understood by them to include the whole economy of a school; and nothing seemed more to astonish people when the disorderly conduct of the cadets at Woolwich and Sandhurst was made public than to be told that the Council of Military Education had no authority to inquire into the matter, but only into the *instruction* of the cadets.

In all public schools abuses have a tendency to accumulate; they require to be looked after by some independent authority *in all their* parts, annually. *No* part of a school is not a part of its *education*. It is quite as much *out* of school as *in* it that the boys are educated, and no part of the education of the Royal Military Normal School, or the Royal Military Asylum, ought in my opinion to be withdrawn from the inspection of the Director-General of Military Education, or his control.

HENRY MOSELEY.

(vi.)—ANSWERS received from the REV. G. R. GLEIG, M.A., Chaplain-General to the Forces.

(B.) NORMAL SCHOOL.

II. I am generally satisfied with the present system for the training and appointment of masters for regimental schools. It might however, in my opinion, be improved if the Head Master were more familiar than he is with the usages of the army, and took more pains out of the lecture room to stamp his own character and habits of thought upon the students.

III. The organization of the establishment seems to be good. The position of the instructors, both in the Normal and Model Schools, would be improved if the serjeants and pioneers were required to salute and otherwise treat them with respect, as was the case when the establishments were originally formed, and for many years after; and if pains were taken to make both students and children understand, that upon the report made of them by their teachers, indulgences would depend. The powers of the Staff, meaning thereby the Commandant and adjutant, are ample. The conduct of the pupils is generally good. I do not approve of the permission given to smoke in the only room where the students can meet for private reading. It is offensive to some, the rest might smoke elsewhere.

IV. Not quite. I am and always have been an advocate for giving to each student a separate bunk, open above and below so as not to interfere with ventilation, but securing to him privacy for habits of cleanliness and devotion. The schoolmaster in a regiment ought to be more than a mere teacher.

V. It will be seen from my answers to former questions that I have not much to say in reply to this.

If the Normal School is to be continued I would suggest the propriety of putting at the head of it either an officer who is capable of instructing the students and has a taste for so doing, or the best of the superintendent schoolmasters. Such a man would indoctrinate his pupils with a love of discipline as well as of letters. He would see as much of them as possible out of school hours, and win them to just views of their position and responsibilities by his conversation.

(C.) MODEL SCHOOL.

VI. I consider the Model School, so far as it is taught by the regular staff of masters, at Chelsea to be as near perfection as such an institution can be. Mr. McLeod has no equal as a schoolmaster, and the less he is interfered with in his mode of dealing with the boys and his choice of text books the better.

VII. I can suggest no improvement on the method of instruction in the Model School properly so called.

VIII. I think that the organization of the establishment, meaning the distribution of the boys into classes, &c., is good. The masters might, however, with advantage be entrusted with more power than they possess in maintaining discipline out of school as well as in school. You cannot draw too close the connexion between the master and pupil in such establishments as this.

IX. The accommodation and messing provided for the pupils are both very good. The sanitary condition of the school can never be perfect or anything like perfect in Chelsea. A plan was arranged some years ago for moving the school into the country, but it fell through. I should very much desire to see it revived.

X. Regular returns are sent in to the Commandant from regiments of the conduct and careers of the boys educated at the Asylum, and they are most satisfactory. Few of the boys fail in becoming non-commissioned officers as soon as they are of age to be promoted. Very few so promoted, I may say none, are ever reduced. The best cornet player in England, Lazarus, was a pupil in the school. My opinion, founded on these returns and on my own inquiries when officially visiting military stations, is, that the service gains a great deal from the institution, and that the results of the education therein given are all that we could wish.

XI. Give your confidence more and more to Mr. McLeod. Treat him and the other masters with all the respect that is due to men charged with their responsibilities. Move the establishment if you can and when you can to some healthy and open situation in the country. Don't intermit the teaching of trades, but rather carry it further than you do. Keep up instruction in music. The singing is ill-taught judging from what I hear in the chapel. The teacher comes from a distance, and is never present to guide his pupils in church; this ought to be required of him. Drawing is not carried far, but as far as it goes it is in a more satisfactory condition than singing. The instrumental music is good.

G. R. GLEIG.

(vii.)—ANSWERS received from W. J. REYNOLDS, ESQ., M.A., Head Master of the Normal School.

NORMAL SCHOOL.

I. The Normal School for training army schoolmasters was established in 1846 at Chelsea, within the "Royal "Military Asylum for the children of soldiers of the "regular army," which last-named establishment was at the same time educationally re-organised, having then been in existence about 45 years. The general educational superintendence of the whole was at first committed to a "chaplain and head master," on whom also devolved not only the religious instruction, but also the teaching of several of the subjects in the then laid down normal course of study; it would be difficult satisfactorily to discharge similar duties without the loyal co-operation of colleagues. On the resignation of the "chaplain and head master" in consequence of ill health, a military chaplain was appointed to the clerical duties and to the religious instruction; the assistant master was appointed "head master of the "Normal School;" the Model Schools (the original Royal Military Asylum Schools) were tacitly left as they had gradually come to be some time before the "chaplain and head master's" resignation.

The mode and conditions of admission to the Normal School are as follows:—Candidates (who must be between 20 and 25 years of age, and not under 5 ft. 5 in. in height, and who, if not non-commissioned officers or privates of the regular army, must be either pupil-teachers who have completed their apprenticeship or else certificated schoolmasters) are admitted to the Normal School after successfully passing a competitive examination (with a qualifying *minimum* of marks) in scripture history, arithmetic, geometry, English history, English grammar, and

* The particulars are given in the Second Report of the Council on Army Schools.

† Eight per cent. at our inspection in 1868.—Fifth Report, p. xxvi.

Appendix III. (A.)

Royal Military Asylum.

geography, marks being also assigned to the writing and spelling in the answers.

The period of training (not now regarding exceptional cases) occupies about two years. As candidates are admitted twice a year, viz., after the Christmas and Midsummer vacations, it follows that the students going through a two years' course form four divisions. The first year is passed in the Normal School, the second in the Model Schools, where the students are instructed in the art of teaching.* At the end of the second year the student who has satisfactorily passed the periodical examinations and inspections is appointed army schoolmaster.

The staff of the Normal School at present consists of a head master, the chaplain (who gives religious instruction), an instructor in fortification, and two non-resident instructors in vocal music and in model drawing, who also teach these subjects in the Model School.

The number of eligible and qualified candidates, and accordingly the number of students in the Normal School, have lately much decreased. There are at present only 16 students, eight of whom are in the normal portion of their course, eight in the model portion. The authorised admissible number of students is at present 40.†

The nature of the course of instruction in the Normal School may probably be best shown by the following syllabus of the subjects of study:

1. Arithmetic and Mensuration. — Complete course; instruction by lessons with text-books.

2. Algebra.—Part I. of Colenso's Algebra; instruction by lessons with text-books.

3. Theoretical and Practical Geometry.—Euclid, Books I. to IV.; instruction in use of instruments and in practical geometrical "constructions."

4. Trigonometry, Logarithms. — So much of the subject theoretically as is necessary and sufficient for the complete understanding of the solution of triangles by trigonometrical calculations.

Practical solution of triangles.

Application of trigonometry to measurement of heights and distances.

Logarithms, theoretically explained and practically applied; instruction by lessons.

5. Industrial Mechanics.—Mechanical idea of work and of power.

Solution of examples of finding the amount of mechanical work used up in various cases, as in lifting weights, in drawing carriages, in excavating, in conveying loads. Examples of finding amount of work given out by steam used in steam-engine. Explanation (with examples) of "simple machines." Explanation (with examples) of the "accumulation of work," in weights in motion. Working of examples on specific gravity.

Instruction by lessons with text-books.

6. English History.—From earliest period to present time.

7. History of British India and British Colonies.

8. English Grammar and Grammatical Analysis.—Lessons with text-books.

9. Geography and Physical Geography.—Complete course; lessons with text-book.

Lessons with physical maps.

10. Scripture Knowledge.—Knowledge of the Pentateuch, the book of Joshua, the Gospels, the Acts of the Apostles.

11. Chemistry.—Properties of non-metallic elements (and incidentally of other elements) with reference to the more familiar natural phænomena and to the application and uses of commonly known substances.

Calculations of quantities of matter transformed in chemical actions.

Expression of chemical reactions by means of diagrams or by means of chemical equations. Instruction by experimental lectures and by text-books.

Physics.—At present restricted to subject of "heat," studied by means of text-book, explained and illustrated by oral instruction.

12. Fortification.

13. Vocal Music.

14. Drawing.

15. Reading.

16. Penmanship.—As shown in papers sent in for examination in foregoing subjects.

The regulations for the maintenance of discipline as regards study in the Normal School consist in rules for the observance of a programme of attendance at lectures and of preparation for the same. Infraction of these rules would in minor cases be punished by extra tasks imposed by the head master; in more serious cases the head master reports the same to the Commandant, who may probably punish the offenders by confining them within the precincts of the institution for a longer or shorter period; while grave offences are further reported by the Commandant to the Council of Military Education.

II. The Normal School course of study (now occupying 12 months) seems, on the whole, well adapted to the purpose of training and educating the future army schoolmaster. But the school being admirably situated in a healthy* locality within a few minutes walk of the valuable educational collections and library at South Kensington, and within a half hour's walk of the Jermyn Street Museum, I should desire a slight modification of the form of the course of study, so that the students might be able, under my direction, better to avail themselves of the exceptional educational advantages placed within their reach by the circumstance of the school being where it is at Chelsea.

The students of the Normal School spend 12 months in practising teaching in the Model Schools. This period of time is very much longer than that similarly spent in any other training schools,† and is much too long considered with reference to the students. I fully believe that (to use the words of the Reverend Canon Moseley)—"It is a great "advantage to the students of the Normal School that "they learn the art of teaching under Mr. McLeod's direc-"tion." But in the first place, if a system of teaching can be learnt at all, it can obviously be learnt in at the most six months by an intelligent man whose attention is wholly given to it, and this being so, all further time spent in a state of pupillage as regards learning how to teach is for the pupil wasted; and in the second place, although the system in the Model Schools be for them a good one, and Mr. McLeod is a most able director of it, yet it is defective for the training of army schoolmasters, inasmuch as it is only imperfectly applicable to the small schools of boys and girls of all ages, which are met with in regiments, and more particularly, inasmuch as it affords very little training available in the teaching of adults. These and other considerations have led me to conclude that the period of training in the Model Schools, when regarded by itself and with reference merely to the students, is at present too long.

The modification of the normal course of study, to which I in the former part of this answer alluded as being desirable, consists mainly in having the students going through that course in one class or division, instead of having them in two classes as they are at present. If, however, there were but one class or division under training in the Normal School, going through a course of one year, say from Christmas to Christmas, and then going in the Model School through a practising course of half a year, say from Christmas to Midsummer, it results that there would be students practising in the Model School through the first half of each year, and no students so practising during the second half.

Thus it appears that if the course in the Model Schools is shortened, say to a six months' course, and if further, the supply of students to practise in those schools is to be continuous, then either the normal course must remain in its present duplicate form, or it also must be shortened to six months.

---

* A part of the instruction in the Normal School is in the art of lecturing, the manipulation of lecture apparatus, and the performance of lecture experiments.

† The originally (1846) authorised establishment was for 30 students and monitors (youths taken into the Model Schools, who subsequently passed into the Normal School to go through the regular course). The establishment was 19 years ago increased to 40 students and 20 monitors. In 1860 monitors were abolished and the establishment was merely for 40 students, about half of whom would be in the Normal School, half in the Model School. But the number of students falling off, and 20 being presumed to be the minimum number of teachers (supplementary to the staff of permanent masters) with which the Model School system could be efficiently worked monitors (pupil-teachers) were a short time ago re-introduced.

* This proposition that the locality is healthy has, on high authority, been disputed, but experience decidedly supports it. I believe that the data on which it has been supposed that the locality has been proved to be unhealthy are insufficient, and also that they are otherwise to be accounted for.

† For examples, I may take St. Mark's College, the Warrington Training School (for girls), and the Battersea Training Schools, at each of which establishments the total period of training is two years.

At St. Mark's, the students pass in the Model School five weeks of the first year, four weeks of the second year. If necessary, an extra week or two may be allowed.

At Warrington, the students pass in the Model School 10 weeks of 17 hours, which is found sufficient with close supervision.

At Battersea, the students pass weeks of each year in the practising school.

II. My position and powers relatively to the students have gradually altered with circumstances connected with the school, and are now somewhat indefinite; they are at present mainly, so to speak, of a professorial character. I suppose that any statement or opinion of mine respecting the discipline of the students apart from their duties in the lecture room, would be held by the military authorities to have little weight in an official point of view, less weight than probably it is desirable that such opinion from a person in my official position should have; perhaps it is owing to their uniform courtesy that no formal discussion on the subject has ever taken place.

I would not by any means be understood here to impute blame to the officers of the institution; their desires to promote its interest are, I doubt not, as strong as my own. A reluctance to offer my opinion except under what may seem to me very urgent circumstances or very opportune conditions, and a smaller consideration of it than perhaps it might deserve, are the natural consequences of the anomalous circumstance that the commandant is supposed to have nothing whatever to do with the scholastic discipline in the Normal School (or in the Model School). This anomalous state of things inevitably produces an *official* coolness or constraint which is, I believe, detrimental to the welfare of the institution, and which would be greater and more detrimental if the commandant were not certain, from knowledge of the head master's personal character, that unless the former were fully acquainted with the circumstances, the latter would never take advantage of his official independence to act or to speak either here or elsewhere in a way implying antagonism.

IV. The accommodation afforded by the school might easily be made in all respects satisfactory, but in almost every respect it is most unsatisfactory. The reading room which is the common room of the students, is warmed, but in other respects it is altogether comfortless, very far inferior to that which any soldier has been accustomed to in his regiment. Again, a most serious defect of accommodation is this, that from half-past six, or often from half-past five (at which hour the students and pupil-teachers are provided with tea and bread and butter) until eight the next morning (when they are provided with coffee and bread and butter) no refreshment whatever can be procured by them within the walls of the institution. They are therefore compelled to go to neighbouring public-houses for refreshments required in the interval. Indeed, the students have made arrangement with some of these publicans for the latter to keep for them a small comfortable furnished room from which other customers are excluded. And I have often known a student, desiring to prepare a lesson or a lecture carefully, to go out with his books from the comfortless noisy reading room, (noisy, because the rooms beneath it were designed and are appropriated as play-rooms for boys of the Royal Military Asylum, an arrangement against which I ineffectually protested when the Normal School was built,) to the quiet and comfortable "students' room" in a public-house near the gate of the institution.

A third defect of accommodation for the students is that the dormitories are very ill ventilated, and totally wanting in privacy; they are without any partitions, which, at St. Mark's and other training schools, convert the large dormitories into a series of rooms sufficiently private without interfering with ventilation or necessary maintenance of regulations.

V. The first suggestion which I would make is, that it is most desirable that each soldier-student should have in place of his regimental uniform a non-regimental one, similar in fact to that issued to civilian students. This simple and (as I have ascertained) inexpensive* measure, would, I am convinced, have an immediate effect in raising the moral tone of the school, which would then have an organic unity instead of being as now a mere crowd or fortuitous concourse of men from different regiments; each man's behaviour would be a matter affecting all, and the influence for good of the students of high principle and exemplary character would soon be felt. There are other cogent reasons why the military students at the Normal School should have the same non-regimental uniform as the civilians; but as I am desired to be brief I will merely state them in a note,† and will only add that I earnestly hope this suggestion may be favourably received by the Commission.

I may here note that the students at St. Mark's College, Chelsea, and those at the Borough Road Schools (and probably at some other places) receive each of them a ticket of admission on students' days to the South Kensington Museum and library. The societies with which those schools are connected probably pay annually some moderate sum to the Department of Science and Art in order to have this privilege. It is desirable that some similar arrangement should be made (as would be very easily done) for the students of the Normal School, or perhaps for army schoolmasters also.

With reference to the dearth of candidates from the army, I beg leave to offer some brief remarks of the nature of suggestions. If the information given to me term after term by students be at all trustworthy, the soldier who thinks of trying to become an army schoolmaster, finds himself from the outset deterred from carrying out the intention instead of encouraged to do so. Very seldom indeed is the information on the subject derived from the schoolmaster of his regiment of an encouraging kind. The accounts I hear of the imperfect promulgation of orders periodically issued relative to the examination of candidates are remarkable for their unanimity. And further, it seems that a man determining to become a candidate cannot readily ascertain the extent or nature of the examination for admission. Some of these difficulties would be at once removed if in all regimental schools a syllabus of the examination with a list of the text books suitable for an intending candidate were so placed as to be accessible to every soldier, and if the periodically issued orders relative to examination of candidates were similarly placarded. But probably the best means of discovering and bringing forward the many highly eligible men who undoubtedly are to be found in the army, would be to give a small premium or fee to the schoolmaster of the regiment from which a man should pass into the Normal School, and a larger fee if (supposing the Normal School course to be maintained in its present form) the candidate should pass into the first division of the school. I should here note parenthetically that candidates who show considerable attainments as tested by the examination for admission to the Normal School are placed in the first division when they join, so that *their* Normal training is reduced to a period of six months. If a measure of this kind were found to be efficacious to the extent of bringing forward a considerable number of men qualified to become army schoolmasters after one year's training altogether (six months in the Normal School, six months in the Model Schools), it is apparent that a great saving of time and expense would result. Believing that it might probably be so efficacious, I feel that I am justified in submitting these remarks or suggestions to the Commission.

The regulations by which a soldier becoming an army schoolmaster loses half his service before coming to Chelsea, and all the time he spends at Chelsea,* are practically, I believe, highly deterrent to eligible men who might otherwise become candidates; but this part of the subject is outside my sphere.

---

* Comparative Estimate.

Guards' uniform of corporal, which seems to come about midway between *Cavalry and Artillery* and *Infantry*, the first being somewhat more expensive, the latter less.	£	s.	d.	Royal Military Asylum civilian-students' uniform.	£	s.	d.
2 tunics, with corporal's stripes and g. c. badge	2	14	6	1 blue frock	2	0	0
2 pair winter trousers	1	2	6	1 jacket and 1 vest	1	15	0
1 pair summer ditto	0	10	5	2 pair trousers	1	15	0
2 white undress jackets, with stripes, &c.	0	14	0	1 suit "gymnastic"	1	10	0
4 pair of boots	2	2	0	2 pair boots	1	10	0
2 pair gloves	0	1	9	2 pair shoes	0	15	0
				2 pair gloves	0	5	0
	£7	5	2		£9	10	0

Instead of regimental great coat, the schoolmaster's cloak to be issued. The uniform from regiment to be handed to Quarter-master Stores, so that, if sent back, the uniform could be again served out.

† Much discord and ill-feeling arise from the circumstance that outside the walls of the Royal Military Asylum the civilian-student's uniform is everywhere an advantage, while the soldier-student's uniform is everywhere a disadvantage. Indeed, his regimental uniform puts the soldier-student in a quite wrong position relatively to the civilian-students, and even to the civilian pupil-teachers. Take the case of a pupil-teacher, who in the regular course will be admitted to the Normal School two years hence, compared with that of a corporal who has been for one year and a half a student (*i.e.*, who for one year and a half has been what the pupil-teacher hopes some day to become). The pupil-teacher in his Royal Military Asylum uniform could go into any serjeant's mess, for he would rank as a staff-serjeant; the corporal would not be treated as a serjeant if he ventured to do such a thing; he would be ordered out in a decided way.

Civilian-students and civilian pupil-teachers have often refused to walk out with soldier-students in uniform. One is not surprised by such refusal, for any rapscallion in the street considers himself entitled to accost a soldier and to make inquiries either about the soldier's own or about some other regiment, or respecting some friend said to be in the regiment. The refusal of soldiers to go and drink with persons thus accosting them has more than once led to unseemly quarrel, and, indeed, to serious results. On one occasion a soldier was near being severely handled for refusing to accept an invitation from an utter stranger to go into a public-house to drink.

The inconvenience of a regimental uniform has been much felt by students visiting museums, reading rooms, and libraries.

* Why should soldiers qualifying at Chelsea for army schoolmasters lose previous service any more than soldiers qualifying at Pimlico for master tailors, at Aldershot for master cooks, at Hythe for musketry instructors, at Aldershot for gymnastic instructors?

Appendix III. (A.)

Royal Military Asylum.

In conclusion, I would remark that a man coming into the Normal School should find everything conducive to his improvement; he should, from all points of view, perceive advantages gained by his admission to it. At present this is not the case. All declare that from the Normal School course they gain much in the way of mental improvement, and many who were elementary teachers before joining have told me that they felt themselves much better qualified for that office by their course of study in the Normal School; but I am continually pained by hearing men express their astonishment and disappointment at finding their character of thinking and respectable adults who have voluntarily become students preparing for the calling of a schoolmaster apparently disregarded or even ignored.

It has been stated that the tone of the Normal School would be raised if it were transferred to a site in the country. If it were so transferred, improvements in the accommodation would probably accompany the transference. To these, and not to the change of situation, would amelioration in tone be properly ascribed. The same improvements, if applied to the Normal School in its present locality, would be followed by the same ameliorations. It is supposed by some that the inducements to immorality (using the word in its widest, as well as in its most specific sense,) which beset a student outside the walls of his school, are greater in a metropolitan establishment than in a provincial one. This seems to be a prevalent opinion; I believe it to be a mistaken one. For young insufficiently-occupied or vacant-minded men, under no supervision and with means to a greater or less degree superfluous, there are indeed special allurements to evil in a metropolis like London. To an earnest man, whose time is sufficiently occupied by useful and improving work, and whose mind is capable of receiving and of valuing knowledge of any kind, it is far more correct to affirm that in London there are special inducements to morality. The adult students who in London are immoral, would be immoral anywhere, and they are unfit to become schoolmasters. The immense educational advantages of a two years' student life in a metropolitan establishment are recognised by the parents who send so many of their sons to King's College, to University College, to the various scientific schools; they well know that these advantages far more than counterbalance the risk in particular instances; and the Department of Science and Art recognises the same principle by affording considerable pecuniary aid to successful teachers connected with the department and resident in the country who make a visit to London, provided they stay in London a certain length of time at least.

Induce eligible men to try to become army schoolmasters, give to them when students in the Normal School the same distinctive uniform, adapt the accommodation within the building at Chelsea to the habits and requirements of a selected body of well-conducted men, and then (with those exceptions from which no school or college can ever hope always to be free, and which under due supervision would soon be eliminated when they occurred,) the men will, in fact, conduct themselves well, and the tone of the school will at once become all that could be wished. I affirm this with confidence, founded on the thorough understanding of the men which careful observation for 20 years has given me.

W. J. Reynolds, M.A.,
Head Master.

Addendum.—Presuming that every subject connected with the Normal School may be brought under the notice of the Commission, I would offer a suggestion on a point of interior detail in the institution, viz., that it is desirable that the Sunday school from six to seven in the evening should be discontinued, and that the students after their second attendance at Divine Service should have the rest of the day at their own disposal to attend evening services elsewhere (which many of them would do), or to enjoy the society of their friends. The Sunday school is felt to be a kind of grievance; and it is much disliked by the masters, the students, and the boys; therefore, although personally unaffected by it, I desire to see it abolished.—W. J. R.

(viii.)—Answers received from Walter McLeod, Esq., Head Master of the Model School.

Model School.

VI. The conditions regarding the admission of boys are strictly defined. The boys must have lost one or both parents (or if both of their parents are living the father must be on foreign service), and they must be free from mental and bodily defect or infirmity. They must be the children of men actually serving in the regular army, or have been born before their fathers ceased to serve therein; and their fathers, if living at the time of the application, must either be still in the regular service or out pensioners. No change seems advisable as to these conditions of admission into the school; and, as I am not cognisant of the mode in operation for filling up the vacancies, I cannot give an opinion on this point.

I beg, however, to direct the attention of the Royal Commissioners to the *age of admission.*

Formerly no boys were received into the schools *after* 10 *years of age.* A few years ago the age of admission was raised to 11 years, and more recently to 12 years. This raising of the maximum age of admission is a serious injury to the educational efficiency of the schools, because it is unaccompanied by any educational test, and because it tends to lower the average time during which the boys remain in the schools.

The following tables show the average ages of 20 boys admitted at the beginning of the years 1855, 1863, and 1870, respectively:—

1855. Average age of 20 boys = 7·03
1863. " " = 8·75
1870. " " = 9·005

The average time for the latter to remain in the schools is thus reduced to about five years, instead of seven years.

But this reduction of time would not be of material consequence, if the boys were fairly educated on admission. But, unfortunately, the majority of the boys are sadly ignorant when they enter. Their educational status may be judged from the following:

1. Age $10\frac{4}{12}$. Neither read nor do any arithmetic.
2. Age $11\frac{4}{12}$. Read first book and addition.
3. Age $10\frac{6}{12}$. Not read nor do arithmetic.
4. Age $10\frac{1}{12}$. Read first book and make figures.
5. Age $11\frac{10}{12}$. " "
6. Age 12 . Letters only.

At the examination in June 1869, there were 27 boys in the infant school between 10 and 12 years of age.

Every practical teacher knows the difficulty of dealing with boys so utterly ignorant; the impossibility of eradicating the bad habits that they have formed in the streets and in the gutters; and of making them acquainted with the simplest elements of knowledge. And yet we are supposed to send such boys out from the schools, in two years, fairly educated.

To remedy these evils, either the maximum age of admission must be reduced to 10 years, or an educational qualification must be required of all candidates on admission.

The minimum age of admission has recently been raised from five years to seven years.

VII. I do not recommend any change either in the course or the method of instruction in the Model Schools. The system, which was introduced by me, has been in operation for 23 years, and has worked satisfactorily, as the various reports on the state of education in the schools testify.

I may state that the schools are organized according to the plans adopted in Holland; and the methods of teaching in the galleries and in the classes are based upon those of Pestalozzi, Wood, and Stow.

The following statement shows the subjects taught in the schools, and also the number of boys receiving instruction in each subject:—

Religious knowledge	458
Reading	458
Writing on slates	458
Writing in copy-books	435
Writing from dictation	435
Composition, exercises in	285
Arithmetic, slate	458
Arithmetic, mental	458
Geography	343
English grammar	343
English history	343
Object lessons	369
Vocal music	313
Poetry, learning—	
(1.) Milton's Paradise Lost, Bk. 1.	30
(2.) Goldsmith's Deserted Village	28
(3.) Miscellaneous pieces	172
Model drawing	58
Analysis of sentences	86
Mensuration and Euclid	30
Natural history	86

The Rev. Canon Moseley, in his last published report of these schools, thus writes:—"Fifty per cent. of the boy

on leaving school have reached a standard of attainment equal to that of the most advanced boys in a middle-class school of the best kind; thirty-three per cent. have reached about the standard of the most advanced boys in a national school; while seventeen per cent. are dull and indolent boys."

VIII. The schools consist of five divisions, each of which under a master, but all the divisions are under my control. Each master is assisted by two or three pupil-teachers, or by the students who have completed their training in the Normal Schools. There are at the present time 13 pupil-teachers. This arrangement works well.

The pupil-teachers and the boys when in school or under instruction in the class rooms are under my charge; when not receiving instruction they are under the control of the adjutant. None of the masters have anything to do *with the conduct or the discipline of the boys or of the pupil-teachers out of school or class.* Only a few weeks since, the pupil teachers were ordered "not to report to me any "matters relating to discipline;" that is, all cases of misconduct out of the school were to be concealed from me. But, when appointed to the office of head master, the regulations for my guidance ran thus:—"He shall consider "that he is charged with the moral training of the children "at all seasons, and when reports are made to him of mis-"conduct he will endeavour to correct the same, using no "more personal chastisement than is absolutely necessary." This regulation may now be regarded as a dead letter.

The masters of the schools are, in all respects, distinct from the officers of the asylum.

Again, with respect to my authority in the schools, the regulations say,—"The commandant will distinctly under-"stand that he is not to interfere with the masters relative "to the course and detail of study;" but the routine of instruction is interfered with, and my authority, as head master, set aside when students are allowed to be absent from their classes without my knowledge or permission, and when arrangements are made for the boys to go to some place of amusement without my receiving any communication on the subject. It has frequently happened that my first intimation of their going out has come from the boys themselves, or from the daily newspaper.

The discipline is not what one would expect to find in a military institution; it has been improved during the last 18 months, but there is plenty of room for still further improvement.

To effect these more careful supervision is required, and a better class of men to undertake the duties of serjeants. The frequent change of serjeants and nurses is not conducive to order and sound discipline.

IX. The accommodation has recently been increased by decreasing the number of boys to 458; formerly the number was 500. I understand, however, that there is accommodation for only 405, allowing each boy 600 cubic feet of space in the dormitories. The ventilation of the school-rooms, the workshops, and the dormitories, and the dietary of the boys have been very much improved, and may be considered as satisfactory.

I, however, am of opinion that the boys ought to have bread and butter *twice* a day, at breakfast and at half-past three o'clock, and not at breakfast only.

The boys are improved in appearance, but there is a want of physical energy and activity, and, considering their ages, great numbers of them are very small in stature. The causes of absence from school, with respect to health, are sore heads, chilblains, coughs, scrofula, measles, scarlatina, and general debility.

Some of the conditions requisite to ensure health,—such as pure air and plenty of space for exercise and recreation,—do not exist here, and hence the advisability of removing the schools into the country, where a healthy site, large and well-ventilated schoolrooms and dormitories could be provided, where the boys would not be cramped for recreation space, and where would be found in abundance pure water and pure air.

X. So far as I have been able to trace the career of the boys educated here by me—whether in the army or in civil life—I have every reason to be satisfied with the results of their education.

Of those personally known to me, *one* is, at present, band master of the Asylum; *one* is band master of St. George's Rifles; *one* is being trained at Kneller Hall for the office of band master; one is hospital serjeant and compounder of medicines in the Asylum (the latter post having been obtained after examination by an army medical board); and *fourteen* are army, and *two* civilian, schoolmasters.

The following table, drawn up from the returns and the reports received in 1866–67, from the several regiments which the boys joined, shows results of a highly satisfactory nature:—

RANK.

Officers	2
Staff serjeants and serjeants	57
Band masters	3
Drum and trumpet majors	13
Corporals and bombardiers	49
Drummers	164
Privates	328
Total	616

CHARACTER.

Exemplary	32
Very good and good	545
Indifferent	30
Bad	9
Very bad	0
Total	616

This table shows that 1·4 per cent. are bad, and *that* 88·5 *per cent. are good and very good.*

XI. I beg respectfully to recommend the following changes:—

1. Every boy should be provided with a pocket-handkerchief.

2. The tables in the dining rooms should be furnished with table-cloths at every meal.

3. The boys should have more space for games and play; and should benefit more frequently and thoroughly by the close proximity of Battersea Park, and the open space in front of Chelsea Hospital.

4. There should be a more careful and parental superintendence of the boys in the dormitories and in the playgrounds.

5. The boys should be allowed to visit the Kensington Museum, the British Museum, and other institutions.

6. No boy should be permitted to work in the tailor's or the shoemaker's shop until he is 11 years of age; and the boys ought not to go direct from the school to work. A clear period of an hour, for recreation, should intervene between the two.

7. The power of the head master of the Model Schools should be increased.

I, for instance, can *teach* and *punish*, but I have no power to *reward*. I cannot take the boys to any place, such as the Museum at Kensington; I cannot give them, on my own authority, a half-holiday; and my influence for good is in every way restricted. The accompanying letters will show the kind of treatment I have from time to time received during the last six years in endeavouring to improve the condition of the boys.

ENCLOSURES to Mr. MCLEOD's answers.

Royal Military Asylum,
SIR, 4th December, 1847.

HAVING submitted to the Commissioners of the Royal Military Asylum your letter of the 12th October, suggesting that orders should be issued enjoining the serjeants, pioneers, &c., to salute the masters of the normal and model schools, I now beg to inform you that they have been pleased to direct that the practice in this respect at the Naval School at Greenwich be adopted in this institution, and that in consequence of this resolution I have this day issued an order requiring the serjeants, pioneers, &c., to salute the masters of the normal and model schools, whenever they may meet them or be spoken to by them.

I am, Sir,
Your obedient servant,
P. BROWN,
Colonel Commanding.

The Rev. W. Du Sautoy.

Royal Military Asylum,
GENTLEMEN, August 2nd, 1866.

I HAVE the honor respectfully to submit the following for your consideration and decision:—

1. During the last six months I had frequently to send boys down from school because their hands, necks, &c. were dirty; and, on two or three occasions, several boys were brought to me whose heads were full of vermin. All these were sent to the serjeants of the companies whose duty it is to see that the boys are clean before they are marched to school.

2. As, however, the evil still continued, early in May I brought *several dirty boys specially under the notice of the Commandant.*

3. Because I acted as I did,—because the serjeants were found fault with for neglecting their duty, they, it seems, made up their minds to treat Mr. Dexter and myself with disrespect. I allowed a fortnight to pass without taking any notice of their conduct to us, thinking they really did not intend to be disrespectful. As, however, it was evident that they had resolved not to salute us, as

they had been in the habit of doing, I forwarded on the 16th May a letter to the Commandant informing him of the conduct of the serjeants of the 4th, 5th, and 6th companies, and requesting him to be good enough to re-issue the orders of the Commissioners respecting the saluting of the masters.

4. As I have still to complain of the conduct of the serjeants, I am obliged most reluctantly to lay the matter before you, because it is of vital importance both as regards the discipline of the schools and the conduct of the boys.

5. It may be advisable to state that the serjeants are in reality *civilians*, and that they are termed *serjeants* merely because this is a *military institution*.

6. With reference to this matter I beg to remark:—

(1.) That this is an important educational establishment.
(2.) That there are special regulations for the guidance of all connected with it.
(3.) That among these regulations is one issued in 1847 respecting the saluting of the masters.
(4.) That, for nearly 19 years, this order has been binding on all serjeants, corporals, &c., and is binding until it is annulled.
(5.) That, if the serjeants mentioned in my letter of the 16th May were acquainted with this order, they have been disrespectful to us, and disobedient to the orders of the Commissioners.

And yet these are the men whose duty it is to superintend the boys in the playground and in the dormitories, to watch over their conduct, and to train them to be orderly, obedient, and respectful.

7. I beg it to be understood that this is not a personal matter; I regard it in its educational bearing, and in its relation to the training of the students and the boys.

If the serjeants are not respectful to the masters, the students and the boys may act towards them in a similar manner; for like begets like throughout every department of nature. If, therefore, in addition to intellectual knowledge the students and the boys are to be taught to be *polite*, *respectful*, and *courteous*, then there must be no difference between the teaching in the school and the teaching in the playground; there must be harmony between the two; precept and example must go hand in hand. If this is not the case, then the labours for the moral and religious well-being of the children will be productive of little benefit. That they may be productive of good the education of the mind and of the manners and morals of the children must go hand in hand; and as the young are prone to forget "to order themselves lowly and reverently," hence the necessity of daily training them to be *respectful* and *obedient* to "all who are set in authority over them."

I have the honor to be,
Gentlemen,
Your obedient servant,
WALTER MCLEOD.

The Honorable
The Commissioners of
The Royal Military Asylum.

Royal Military Asylum, Chelsea,
13th November 1866.

SIR,

WITH reference to your letter of the 2nd August last, I am directed by the Commandant to acquaint you that in consequence of the small number of Commissioners present on that day, the consideration of the question of the masters of this institution being saluted by the non-commissioned officers * was postponed until the meeting of the Board held on the 2nd instant, on which occasion the subject was again brought to the notice of the Commissioners, when the following resolution was adopted:—

Resolved,—

"The Commissioners direct that the order of the Commandant, dated 4th December 1847, requiring that the masters of the Asylum should be saluted by the serjeants and pioneers be rescinded, as the compliment of a salute is only due to officers holding Her Majesty's commission."

I have the honor to be, Sir,
Your obedient servant,
E. ADAMS, Colonel,
Secretary.

Walter McLeod, Esq.,
&c. &c. &c.

(xi.)—ANSWER received from Deputy Inspector-General of Hospitals J. B. ST. C. CROSSE, Medical Officer to the Asylum.

MODEL SCHOOL.

Royal Military Asylum, Chelsea,
10th March 1870.

SIR,

IN reply to your letter of the 4th inst., and its enclosure, respecting the accommodation, messing, and general sanitary state of this school, I have the honour to submit, for the information of Lord Dufferin and the Commission on Military Education, the following observations, the result of my experience since June 1866, when I was appointed as medical officer to the institution, premising that since that date various alterations and improvements have been carried out, amongst which may be noted,—

The occupation of three large attics, calculated for 38 boys each.

Removal of waterclosets and urinals from the dormitories to outside of building.

Partial ventilation of sleeping rooms, school rooms, workshops, and cells.

Improved and varied dietary for halls and hospital.

Weekly inspection of boys.

Abolition of double beds for small boys.

Inspection and selection of boys for trades.

New gratings for bath rooms.

Erection of Jennings' privies and urinals in one of the yards.

Raising the standard of age to seven years on entry.

Reduction of some 42 boys to meet the overcrowding.

Accommodation, &c.

With regard to the accommodation afforded, that for sleeping being of most consequence may be taken first; and it is my opinion that many of the dormitories are still overcrowded, and the beds too close together, especially in the rooms in either wing of the building, which, backing on each other, with low ceilings, and facing north and south, are inaccessible to free perflation, and are not as a consequence so promotive of health as they might be.

The number of beds should be reduced, so as to give more lateral space, whilst at least 600 cubic feet should be allotted to each occupant. The places appropriated for playing during winter, wet or hot weather, are inadequate to such a number of boys, and the present "hot houses" (so called) with single stoves, low ceilings, confined space, and ground floors, are perfectly unsuited to the purpose, whilst the yards are too limited, and the green in front of the Asylum is not at all times available or suitable.

In lieu of the above, it would be desirable to utilize the band and gymnastic halls for winter or other inclement seasons, leaving the present ill-adapted places for cleaning boots, knives, &c.; and for out-door recreation the ground facing the Royal Hospital, where the guards, pensioners, and police usually drill, with the permission of the authorities, might be made available for playing cricket and other games, being close at hand and most convenient in every respect.

Messing, &c.

My particular notice was called to this subject, shortly after coming here, since which period, in conjunction with the quarter-master, Mr. House, it has been a constant source of consideration and attention.

A glance at the accompanying rolls,* will show the variety of articles issued and the composition of the different meals, which I am satisfied are of good quality, sufficiently nourishing, and changed as often as necessary to meet nearly every requirement; and after a fair trial, to my idea, the dietary is well calculated for winter and summer, and needs little alteration. It may be added, that whereas some time ago, several boys were in the habit of leaving their meat unconsumed, at present very few indeed are found to do so.

In compliance with your direction, I would beg leave to invite the attention of the Commission to a few recommendations which I feel to be essentially necessary to the preservation of health amongst the boys, and which indeed concern equally every inmate of the establishment, and which, seeing the number of epidemics already passed through in a short time, would appear urgently called for, which is, that some restriction should be placed on the admission of visitors to the school, without which it is next to impossible to guard against or prevent the extension of so-called preventible diseases.

This precautionary measure is the more called for, situated as we are, and bearing in mind the localities whence the visitors generally come.

The cleanliness and health of the boys would be considerably benefited by the use of the swimming bath all the year round; at present it is closed from about October till the warm weather sets in, but if a jet of steam could be introduced, so as to take the chill off the water, which I advocated some time back, all the larger boys could bathe regularly, and great advantage follow.

Under present rule the sheets are only changed once a month, this during the summer weather is most objectionable, and could it be remedied would add to the comfort, health, and cleanliness of the boys.

The substitution of Jennings' waterclosets having answered so well in the small boys' yard, it would materially improve the sanitary condition of the premises by a further extension of the system, in place of the existing conveniences, which in hot weather are most offensive. And lastly, some alteration and extension in the trades appear to be called for; at present boys are selected for band, drummers, shoemakers, and tailors, in the order given.

---

* *Explanatory note by Mr. McLeod.*—All the serjeants are *discharged soldiers*; and the majority of those who have filled the office of serjeant here, were privates in the regular army. They cannot, therefore, be regarded as non-commissioned officers.

* See Scale of Diets, page 169.

After mature reflection, I am come to the conclusion that the shoemakers' shop is more detrimental to the health and development of the boys' physique than either of the other pursuits; and it becomes a question whether its abolition would not be rather beneficial than otherwise; the boys are only taught to repair (which can be of little future advantage, and is not much in favour,) and if abolished, more hands would be available for tailors or other callings, by which the working time might be reduced and more time given for play, and strengthening the system in the open air. I also think it advisable that no boy should be employed at any trade under 11 years of age. The returns called for are herewith enclosed.*

Appendix III. (A.)

Royal Military Asylum.

I have the honour to be, Sir,
Your obedient servant,
J. B. St. C. Crosse,
Deputy Inspector General of Hospitals.

The Secretary,
Military Education Commission.

B.—PAPER SUBMITTED TO THE COMMISSION.

Appendix III. (B.)

Royal Military Asylum.

Memorandum by Mr. Charles Naylor, Second Master of the Model School.

Royal Military Asylum.

It has been long an idea occupying the minds of our leading military administrators how the organisation of the above-named Institution might be altered so as it might supply the army with soldiers capable of bearing arms, instead of as at present merely with drummer boys. The following suggestions are therefore respectfully submitted, as affording in a small degree a solution of the difficulty.

First, all the boys admitted into this institution should be kept here until they are *fifteen* years old, and at the end of that time they should be transferred to another institution of a similar character, in which they would remain until they had completed their *eighteenth* year.

The number of boys in the Asylum might be increased to 600; and accommodation may easily be provided for them in two ways. First, by the abolition of the Normal School; and secondly, by a readjustment of the quarters of the officials in the Asylum. The present staff quarters must in truth be admitted to be far in excess of their absolute requirements, and if the masters of the schools became non-resident, receiving the usual allowance in lieu thereof, more than sufficient accommodation for 600 boys will be available.

The 600 boys may be conveniently divided for the purposes of education into four schools, each of 150 boys; and the educational staff of each school may consist of one master and five pupil teachers. The total number of the staff required will be therefore *four* masters and *twenty* pupil teachers, and no more.

The schoolrooms now in use can be adapted for the increased number of boys at a trifling expense. All that has to be done in the way of enlargement is to knock down two lath and plaster partitions—one between the present second and third schools, and the other between the fourth schoolroom and the ante-room. Each schoolroom should be fitted up with desks for *five classes*, and these can be provided by a re-arrangement of those now used. Four noble schoolrooms will be thus provided, more healthy and more convenient than some of those now in use.

The education of the boys under this arrangement will be greatly facilitated; and in the first school the standard of education may be pushed far beyond its present limits. The boys in the first school ought to receive an education fit for any non-commissioned officer in Her Majesty's army, and disposed as I have suggested it can be given to them. This is no visionary scheme; my experience years ago as the master of a school of 182 boys has taught it me.

Any school benefits greatly by the presence of visitors from time to time; not at stated intervals, but at any time suitable to the officers. The schools at Chelsea in this respect suffer greatly. Visitors are not encouraged, not even the Commandant. If the governor of the institution came into the schools when he liked to notice how the education progresses, it would have a very cheering effect upon the schoolmaster, and a very encouraging effect upon the pupils. For this reason I would suggest that the Commandant be invested with full powers as superintendent of studies; that he should be, in point of fact, the head of all departments.

The pupil-teachers should be admitted at the age of *fifteen years* by a competitive examination, without nomination; but the usual guarantees of respectability, &c., should be demanded of them. On admission they should be articled to the Commandant for five years, as in the national schools. The indentures to be cancelled for misconduct or inefficiency at any time, or, under any other circumstances, after six months' notice.

The pay of the pupil-teachers should begin (as in the national schools) at ten pounds the first year, increasing, after passing an examination for that object, two pounds ten shillings every year; until in the fifth year the teacher would be in the receipt of twenty pounds.

At the end of the fifth year the pupil teacher would become eligible for admission to one of the national training colleges to be educated for the appointment of army schoolmaster.

The residence there is usually two years, but the ability of the individual may shorten the period. The cost of his education and maintenance at the training college would be about thirty pounds a year. On passing from thence with a certificate of *efficiency* he should be appointed army schoolmaster and posted to a regiment (under an experienced schoolmaster) for twelve months, where he would learn *how to teach adults* and how to manage a *regimental* school for himself. This most necessary instruction is obtained indifferently in a garrison school, and not at all in the Model Schools, Royal Military Asylum.

The masters in the Model Schools, Royal Military Asylum, have now on an average 84 boys under their charge. In accordance with this suggestion they would have 150 boys each to educate. I would therefore propose a little alteration in their salaries. First let me notice that instead of five schoolmasters as at present, I propose *four* only.

Salaries.

Master of the first school, if a civilian, 150*l.* to 300*l.* yearly, by a triennial increase of 50*l.*

Master of the second school, if a civilian, 140*l.* to 250*l.* yearly, by a triennial increase of 50*l.*

Master of the third school, if a civilian, 130*l.* to 225*l.* yearly, by a triennial increase of 25*l.*

Master of the fourth school, if a civilian, 120*l.* to 200*l.* yearly, by a triennial increase of 25*l.*

Should a military schoolmaster be appointed to any of the above schools, a yearly allowance in addition to the pay of his army rank, without increase.

This estimate does not include the allowances for diet or quarters, nor yet any compensation for the withdrawal of the privileges of superannuation, should it be so determined.

The Higher School.

With the present strength of about 400 boys, nearly one-fourth enter the army every year. Therefore, with 600 boys I infer that more than 120 boys would be eligible for transfer to the higher school every year.

Annual transfer to higher school.

I would suggest that the unused barracks at Croydon be appropriated for the higher school.

To be situated at Croydon.

This school should be eminently a military institution, for the education of soldiers capable of bearing arms. The boys to be admitted at 15 years old, and transferred to the army on completing their 18th year.

Objects:
1. Military exercises.
2. Handiwork.
3. Education.

It would have its staff of drill instructors, of artificers to instruct the youth in industrial pursuits, and schoolmasters. All these should be military men, and all selected for individual merit and experience in the army.

No more than three hours a day for five days in the week should be permitted for school subjects. The rest of the time should be occupied either in the workshops or on regimental duty.

The cost of carrying out this experiment would comparatively be trifling. The staff of all the departments might be detached from their corps, and receive while so employed extra-duty pay, or some equivalent allowance. After five years' employment in the institution, a step in military rank might be the reward of their services.

Cost probably trifling.

Here the boys would remain for three years, to be well fed, well clothed, well educated, and well drilled; and at the age of eighteen would enter the army as efficient soldiers.

Period of training.

In the third year there would be about 400 youths in the higher school, and this would be from that time the probable strength of the establishment.

Probable strength of establishment.

* See Sanitary Returns, page 167.

Appendix III. (B.)

Royal Military Asylum.

Capable of extension. Success of the scheme depending on the staff.

If the experiment proved successful there would be no difficulty in extending its operation.

The success of the scheme would depend entirely upon the individual capabilities of the staff appointed. Great care would be therefore necessary in making the selection. As regards the schoolmasters, I would suggest that they had at least twelve years' army service as such.

The Commandant would be the soul of the institution, and upon his genius and ability to command, the success of the scheme would depend.

There would be plenty of room for manœuvring on Mitcham Common.

Charles Naylor,
Second Master, Model School.

Appendix III. (C.)

Royal Military Asylum.

C.—ROYAL WARRANTS RELATING TO THE ROYAL MILITARY ASYLUM.

(i.)—Royal Warrant of 21st November 1846, establishing the Normal School.

Victoria R.

With the view of securing efficient schoolmasters in Our several regiments of cavalry and infantry, Our will and pleasure is, that there shall be established at Our Royal Military Asylum at Chelsea a Normal School for the instruction of persons to be appointed schoolmaster-serjeants in Our army, and also a Model School, which shall consist of the boys maintained in Our said Asylum, and upon which all the schools in Our regiments of cavalry and infantry shall be formed.

The Normal or Training School shall be under the management of a head-master, with an annual salary of 350*l.*

The head-master shall be assisted by an assistant master, with an annual salary of 200*l.*, who shall likewise exercise a general control over the Model School.

An upper master and a first and second master shall be appointed to the Model School, with salaries respectively of 200*l.*, 120*l.*, and 100*l.* a year; and also a master to take charge of the infant school, with an annual salary of 120*l.*

It shall rest with Our Secretary-at-War to submit for Our approval such orders, regulations, and instructions as may be necessary for the due government of the schools established at Our said Royal Military Asylum.

Given at Our Court at Windsor this twenty-first day of November 1846, in the tenth year of Our reign.

By Her Majesty's Command,
F. Maule.

(ii.)—Royal Warrant re-organizing the Royal Military Asylum, 21st December 1846.

Victoria R.

Whereas We were pleased by Our warrant of 21st November 1846 to establish at the Royal Military Asylum a Normal School, a Model School, and an infant school; and whereas the warrants now in force regarding the Royal Military Asylum, of dates anterior to 21st November 1846, have under recent arrangements become inapplicable, it is Our will and pleasure that, in lieu of all the said warrants, this Our warrant shall be the sole and standing regulation.

In regard to the general management of the affairs of Our Royal Military Asylum, We declare Our will and pleasure to be as follows:—

The Commander-in-Chief of Our forces in the United Kingdom, Our Secretary-at-War, Our Bishops of London and Winchester, the Paymaster-General of Our Land Forces, Our Master-General of the Ordnance, Our Quartermaster General, Our Adjutant-General, the Governor and Lieutenant-Governor of Our Royal Hospital at Chelsea, the Governor of Our Royal Military College, the Colonels of Our two regiments of Life Guards, Our Judge Advocate-General, and Our Deputy Secretary-at-War, all for the time being, together with His Majesty the King of Hanover, His Royal Highness the Duke of Cambridge, Lieutenant-General Sir Benjamin D'Urban, G.C.B., General Viscount Beresford, G.C.B., Lieutenant-General Sir Howard Douglas, Bart., G.C.B., General the Right Honourable Sir James Kempt, G.C.B., Lieutenant-General Viscount Hardinge, G.C.B., Lieutenant-General Sir John Gardiner, K.C.B., General Sir Thomas Bradford, G.C.B., Major-General George Brown, K.H., Lieutenant-General Lord Fitzroy Somerset, K.C.B., Major-General Sir H. D. Ross, K.C.B., the Right Honourable Sidney Herbert, late Secretary-at-War, to be Our Commissioners for the government of Our Royal Military Asylum; and it is Our Royal pleasure that Our Commander-in-Chief for the time being shall be the President, and Our Secretary-at-War for the time being shall be Vice-President of Our said Royal Military Asylum.

Our several Commissioners above specified, or any five or more of them, forming a board (of whom Our Commander-in-Chief, Secretary-at-War, Paymaster-General, Quartermaster-General, Adjutant-General, or Governor of Chelsea Hospital, shall always be one), shall have full power and authority to direct all such matters and things as they in their discretion shall judge expedient for the due government and maintenance of Our said Asylum. Four quarterly or general boards shall be holden in each year, viz., on the first Tuesdays in the months of January, April, July, and October, or as soon thereafter as may be; of which the Secretary shall give due notice to each Commissioner one week at the least preceding each board.

At those quarterly boards the general business of the institution shall be transacted, such as the authorizing and approving of contracts, the examining and settling of all accounts, and the consideration of the necessary applications from time to time to Parliament for the sums required in support of the institution.

A committee (open to all commissioners, but at which three of those above specially named shall always be present,) shall meet as often as occasion may require to receive reports, to determine on the reception or rejection of children recommended for admittance into the Asylum, under such restrictions and regulations as shall have been previously prescribed by Our Commissioners at any general board, and to give directions in all matters respecting the interior economy of the institution, other than such as relate to the schools; and whenever such committee may find it expedient, it is to direct the Secretary to summon a special general board of commissioners at any intermediate time between the quarterly boards.

In the selection of the children for admission preference in general shall be given,—

1st. To orphans.
2nd. To those whose fathers have been killed, or have died on foreign service.
3rd. To those who have lost their mothers, and whose fathers are absent on duty abroad.
4th. To those whose fathers are ordered on foreign service, or whose parents have other children to maintain.

The merit of the father, as to regimental character, shall be always considered as a principal recommendation.

None shall be admitted except the children, born in wedlock, of warrant and non-commissioned officers and soldiers of Our regular army.

Every child previous to admission must be ascertained to be entirely free from mental or bodily infirmity or defect.

The parents or friends applying for the admission of children shall be required to sign their consent to such children remaining in the asylum as long as Our Commissioners may think fit, and to their being disposed of, when of proper age, at the discretion of the Commissioners, as apprentices or servants, or to their being placed, with their own free consent, in Our regular army as private soldiers.

The number of children to be admitted shall not exceed 350.

There shall be on the establishment of Our Royal Military Asylum a commandant who shall also do the duties of treasurer, with pay at 300*l.* per annum and an allowance of coals and candles for three rooms.

Chaplain.—When a vacancy occurs in the present situation of chaplain, it will be held by the head master, without any addition to his present salary.

An adjutant and secretary with the pay of 10*s.* a day and an allowance of coals and candles for two rooms.

A quartermaster and steward with a salary of 180*l.* per annum and an allowance of coals and candles for two rooms.

A surgeon who holding the rank of surgeon to Our forces shall receive the pay of 15*s.* per diem with an allowance of coals and candles for two rooms and a half.

A quartermaster-serjeant whose pay shall be 3*s.* per diem, with clothing, board the same as the children, and an allowance of coals and candles for one room.

Serjeant-assistants in the proportion of one to every 50 boys; they shall have the pay of 1*s.* 10*d.* per diem each, clothing and board and an allowance of coals and candles, according to the season of the year, in a proportion to be fixed by Our Commissioners.

To such of the serjeant-assistants as shall be employed to instruct the boys in the different trades, We are pleased to allow 6*d.* per diem each, in addition to the pay of 1*s.* 10*d.* as above specified.

A serjeant-porter who shall have the pay of 1*s.* 10*d.* per diem, with clothing and 1*s.* per diem in lieu of board, together with an allowance of coals and candles in proportion to be fixed by Our Commissioners.

Two pioneer-corporals who shall have the pay of 1*s.* 6*d.* per diem each, with clothing, and 1*s.* per diem in lieu of board.

A drum-major to be allowed pay, clothing, and board as the non-commissioned officers.

Nurses in the proportion of one to each ward, to be allowed 10*l.* per annum each and their board, with clothing, and coals and candles the same as the serjeant-assistants.

Nurses for the infirmary in proportion to the number of the sick, to be allowed 12*l.* per annum each and their board, with clothing, and coals and candles as the other nurses.

The officers, assistants, and servants belonging to Our Royal Military Asylum shall not directly or indirectly demand or receive any perquisite, or any emolument whatever, beyond the pay and allowances annexed to their respective employments.

The Commissioners of Our Royal Military Asylum, or any five or more of them, assembled at a General Board, shall appoint from time to time the said officers, assistants, and servants, and displace them or any of them as to Our said Commissioners shall seem meet, excepting the commandant, adjutant, quartermaster, and surgeon, who receiving commissions from Ourselves, shall not be removable unless by Our special command, and excepting the persons belonging to the school establishment.

In all cases when any order or warrant is to be granted for the payment of any sum or sums of money for the uses of Our Royal Military Asylum, every such order or warrant shall be signed by three or more of the Commissioners of whom Our Commander-in-Chief, Secretary-at-War, Paymaster-General, Quartermaster-General, Adjutant-General, or Governor of Chelsea Hospital shall always be one.

Schools.

The appointment and removal of the several persons belonging to the School establishment shall rest with Our Secretary-at-War.

A School Committee shall consist of —

Our Secretary-at-War,
Our Bishop of London,
Our Paymaster-General,
Our Judge Advocate-General,
Our Quartermaster-General,
Our Deputy Secretary-at-War,
Viscount Hardinge, late Secretary-at-War,
The Right Hon. Sidney Herbert, late Secretary-at War,

any three or more of whom will assemble as frequently as they shall deem expedient, to receive the reports of the several masters, and shall give all necessary directions relating to education.

The masters will report periodically to the School Committee and to Our Secretary-at-War.

Finally, the Inspector-General of Military Schools is to have free access at all times to the Schools, for the purpose of inspecting and reporting upon the same.

Given at Our Court at Windsor this twenty-first day of December 1846, in the tenth year of Our reign.

By Her Majesty's Command,
F. Maule.

(iii.) — Royal Warrant of 20th April 1861, regulating the Royal Military Asylum.

Victoria R.

Whereas We are pleased to revise Our warrants of 21st November and 21st December 1846, regarding the Royal Military Asylum; it is Our will and pleasure that, in lieu of the said warrants, this Our warrant shall be the sole and standing regulation.

In regard to the general management of the affairs of Our Royal Military Asylum, We declare Our will and pleasure to be as follows :—

1. Our Secretary of State for War, the General Commanding-in-Chief of Our forces in the United Kingdom, Our Bishops of London and Winchester, the Paymaster-General of Our Land Forces, the Under Secretaries of State for War, the Secretary for Military Correspondence, Our Quartermaster-General, Our Adjutant-General, the Governor and Lieutenant-Governor of Our Royal Hospital at Chelsea, the Governor of Our Royal Military College, Our Chaplain-General, and our Judge Advocate-General, all for the time being, together with such officers and others as have been or may hereafter from time to time be appointed by Us, to be Our Commissioners for the government of Our Royal Military Asylum; and it is Our Royal pleasure that Our Secretary of State for War for the time being shall be the President, and our General Commanding-in-Chief for the time being shall be the Vice-President of Our said Royal Military Asylum.

2. Our several Commissioners above specified, or any three or more of them, forming a board (of whom Our Secretary of State for War, General Commanding-in-Chief, Paymaster-General, Under Secretary of State for War, Secretary for Military Correspondence, Quartermaster-General, Adjutant-General, or Governor of Chelsea Hospital, shall always be one), shall have full power and authority to direct all such matters and things as they in their discretion shall judge expedient for the due government and maintenance of Our said Asylum.

3. Four quarterly or general boards shall be holden in each year, viz., on some convenient day in the months of February, May, August, and November; of which the Secretary shall give due notice to each Commissioner one week at the least preceding each board.

4. At those quarterly boards the general business of the institution shall be transacted, such as the authorizing and approving of contracts, the examining and settling of all accounts, and the consideration of the necessary applications from time to time to Parliament for the sums required in support of the institution.

5. A committee (open to all Commissioners, but at which one of those above specially named shall always be present) shall meet as often as occasion may require to receive reports, to determine on the reception or rejection of children recommended for admittance into the Asylum, under such restrictions and regulations as shall have been previously prescribed by Our Commissioners at any general board, and to give directions in all matters respecting the interior economy of the institution, other than such as relate to the course and detail of study in the schools; and whenever such committee may find it expedient, it is to direct the Secretary to summon a special general board of commissioners at any intermediate time between the quarterly boards.

6. In the selection of the boys for admission preference in general shall be given,—

1st. To orphans.
2nd. To those whose fathers have been killed or have died on foreign service.
3rd. To those who have lost their mothers, and whose fathers are absent on duty abroad.
4th. To those whose fathers are ordered on foreign service, or whose parents have other children to maintain.

The merit of the father as to regimental character shall be always considered as a principal recommendation.

None shall be admitted except the children born in wedlock, of warrant and non-commissioned officers and soldiers of Our regular army.

7. Every boy previous to admission must be ascertained to be entirely free from mental and bodily infirmity or defect.

8. The parents or friends applying for the admission of boys shall be required to sign their consent to such boys remaining in the asylum as long as Our Commissioners may think fit, and to their being disposed of, when of proper age, at the discretion of the Commissioners, as apprentices or servants, or to their being placed, with their own free consent, in Our regular army as private soldiers.

9. The number of children to be admitted shall not exceed such number as We may be pleased to direct from time to time through Our Secretary of State for War.

10. The officers, non-commissioned officers, and others to be borne on the establishment of Our Royal Military Asylum, and the rates of pay and allowances to be issued to them, shall be such as have been or may hereafter be sanctioned by Our Secretary of State for War, with the concurrence of the Lords Commissioners of Our Treasury.

11. The officers, assistants, and servants belonging to Our Royal Military Asylum shall not, directly or indirectly, demand or receive any perquisite or any emolument whatever beyond the pay and allowances annexed to their respective employments.

12. The Commissioners of Our Royal Military Asylum, or any three or more of them, assembled at a general

Appendix III. (C.) Royal Military Asylum.

board, shall appoint from time to time the said officers, assistants, and servants, and displace them or any of them as to Our said Commissioners shall seem meet, excepting the Commandant, Chaplain, Adjutant, Quartermaster, and Surgeon, who, receiving commissions from Ourselves, shall not be removable unless by Our special command, and excepting the persons belonging to the school establishment.

In all cases when any order or warrant is to be granted for the payment of any sum or sums of money for the uses of Our Royal Military Asylum, every such order or warrant shall be signed by three or more of the Commissioners, of whom Our Secretary of State for War, General Commanding-in-Chief, Paymaster-General, Under Secretary of State for War, Secretary for Military Correspondence, Quartermaster-General, Adjutant-General, or Governor of Chelsea Hospital, shall always be one.

Schools.

14. With the view of securing efficient schoolmasters in Our several regiments of cavalry and infantry, Our will and pleasure is, that there shall be established at Our Royal Military Asylum at Chelsea a Normal School for the instruction of persons to be appointed schoolmasters in Our army, and also a Model School, which shall consist of the boys maintained in Our said Asylum, and upon which all the schools in Our regiments of cavalry and infantry shall be formed.

15. The masters and assistants to be borne on the establishment of the training, model, and infant schools, and the pay and allowances to be issued to them, shall be such as have been or may hereafter be sanctioned by Our Secretary of State for War, with the concurrence of the Lords Commissioners of Our Treasury.

16. It shall rest with Our Secretary of State for War to submit for Our approval such orders, regulations, and instructions as may be necessary for the due government of the schools established at Our said Royal Military Asylum.

17. The appointment and removal of the several persons belonging to the school establishment shall rest with Our Secretary of State for War.

18. The masters, instead of reporting as heretofore to the School Committee and to the Secretary-at-War, will report periodically on all matters relating to the details and course of study to the Council of Military Education through the commandant.

19. Finally, the members of the Council of Military Education are to have free access at all times to the schools, for the purpose of inspecting and reporting upon the same.

Given at Our Court at St. James's, this twentieth day of April 1861, in the twenty-fourth year of Our reign.

By Her Majesty's Command,
Herbert.

Appendix III. (D.) Royal Military Asylum.

D.—ADMISSION OF CANDIDATES TO THE NORMAL SCHOOL, &c.

Regulations for the Appointment of Army Schoolmasters, and for the Admission of Pupil Teachers into the Model School Royal Military Asylum.

1. Candidates for the situation of army schoolmaster are required to undergo a course of training in the schools of the Royal Military Asylum, Chelsea.

2. The following persons alone are eligible to become candidates, viz.:—

Non-commissioned officers and privates of the regular army, who are recommended by their commanding officers; civilian pupil-teachers who have completed their apprenticeship; certificated schoolmasters.

3. Candidates must be in good health; free from any defect of vision or voice, and from any physical deformity; between 20 and 25 years of age on the day of examination; and not under 5 feet 5 inches in height.

4. The physical fitness of candidates is ascertained by an army medical officer.

Their admission to the schools is determined by the result of a competitive examination.

5. The examination* comprises the following subjects:—

Reading - { to which, however, no marks are allotted.

Writing - { marks are assigned to the writing and spelling in the answers to the questions.
Spelling - {

English Grammar.—Accidence and elementary syntax.

Scripture History.—Outlines of historical facts of the Bible.

History of England.—From earliest period to death of Richard III.

Geography.—An outline of the geography of the world, and special knowledge of the geography of the United Kingdom, France, and Germany.

Arithmetic.—Elementary rules, practice, simple and compound proportion, simple interest, vulgar and decimal fractions, and extraction of the square root.

Geometry.—Euclid, books I. and II.

6. Candidates, if soldiers, must apply through their commanding officers to the Adjutant-General; if civilians, to the Council of Military Education; in both cases forwarding, with their application, the following certificates or statements:—

Certificate of age.
Statement of height.
Statement of religious denomination.
Certificate of conduct.

If the candidate is a soldier, the certificate of conduct is to be accompanied by a statement of his services, and a recommendation from his commanding officer.

If the candidate is a civilian, his certificate of conduct is to be signed by the minister of the parish, or of the congregation of which he is a member; and it must be accompanied by a recommendation from the minister or managers of the school in which he has been employed.

Civilian candidates must forward, in addition to the foregoing, such certificates as they may have received from the Committee of Council on Education, or from the Board of National Education in Ireland.

7. Should the candidate, after furnishing the above particulars, be considered eligible, he will be permitted to attend the examination next ensuing, the date of which will be communicated to him.

8. The examination of civilian candidates takes place at the Royal Military Asylum, Chelsea; but no charge against the public for expenses incurred by them during the examination, or in travelling to, or returning home from Chelsea, will be allowed.

9. Candidates from the army will be examined at the stations or in the districts where they may be serving.

10. Each civilian candidate, if successful in the competition, will be required to execute a policy with the Provident Clerks and General Guarantee Association for the sum of 50*l.* (on which he will have to pay a premium of 4*l.*), as a guarantee for his good conduct, and for the fulfilment of his engagement to enlist in the army.

11. They will be required to provide themselves with the following articles, of the same pattern as those in use at the Royal Military Asylum, viz.:—

6 shirts.
6 pairs of socks.
3 pocket handkerchiefs.
4 towels.
1 pair of boots.

12. The period of residence at the Royal Military Asylum is about two years.

This period, however, may be reduced, should the candidate prove himself possessed of superior qualifications at the entrance examination.

13. Students are liable to removal at any time for incompetency or for want of application to their studies; and to dismissal with forfeiture of bond for misconduct.

14. During the period of their residence at the Royal Military Asylum, civilian students are messed and provided with uniform at the expense of the public. Military students receive their regimental clothing and pay, subject to a deduction of 6*d.* a day for their messing; and they will be shown in the regimental returns under the head of "Absent on duty as students at the Royal Military Asylum."

15. On completing their course of training as students, and on being reported qualified by the Council of Military Education, they will be enlisted and appointed army schoolmasters; if civilians, they will be enlisted (without bounty) for general service for the period of 12 years; if soldiers, they will be discharged from their regiments and re-enlisted (without bounty) for general service for the

* Usually held in January and August. Candidates should apply at least a month before.

period of 12 years, reckoning towards their pension as schoolmasters one half of their service prior to admission to the Royal Military Asylum, but no portion of the time spent by them at the Royal Military Asylum.

16. Army Schoolmasters rank as non-commissioned officers next below serjeant-majors.

17. Their pay is as follows; with quarters and fuel, or allowance in lieu :—

On first appointment		3*s.* 0*d.*	per diem.
After 2 years' service		3*s.* 6*d.*	,,
,, 4	,,	4*s.* 0*d.*	,,
,, 6	,,	4*s.* 6*d.*	,,
,, 8	,,	5*s.* 0*d.*	,,
,, 10	,,	5*s.* 6*d.*	,,
,, 12	,,	6*s.* 0*d.*	,,
,, 14	,,	6*s.* 6*d.*	,,

The above periodical increase is contingent on the good conduct of schoolmasters, and their success in the management of their schools.

18. Schoolmasters, after 21 years' service, calculated according to the regulations, are entitled to a pension of 2*s.* 6*d.* or 3*s.* per diem.

19. Superintending Schoolmasters are selected from the army schoolmasters for merit and service. They receive commissions as officers, with the relative rank of ensign. Their pay varies from 7*s.* to 8*s.* a day, according to service, with quarters or lodging money, and with an allowance of 1*s.* a day in lieu of a soldier servant.

20. Superintending schoolmasters may, with the sanction of the Commander-in-Chief and the Secretary of State for War, be permitted to retire after an aggregate service of 30 years, calculated in conformity with the regulations, on an allowance of 7*s.* 6*d.* or 8*s.* per diem.

21. The widows of superintending schoolmasters will be eligible for pensions, and their children for an allowance from the Compassionate Fund, under the regulations applicable to officers of corresponding rank.

22. All schoolmasters are subject to the Mutiny Act, and to the rules and discipline of the service.

Pupil Teachers.

23. A limited number of pupil-teachers, either soldiers or civilians, will be admitted into the Model School at the Royal Military Asylum between 17 and 19 years of age.

24. If found physically fit, they will be examined in the subjects named in Art. 5, as far as and including arithmetic.

25. Should the number of candidates exceed the number of vacancies, those who pass highest on the list will be selected for admission.

26. The salary of civilian pupil-teachers will be 6*d.* per diem while serving in the Model School. Soldiers will be entitled to their regimental pay, subject to a deduction of 6*d.* a day for their messing.

27. At the age of 20 years they will compete with other candidates for admission to the Normal School.

28. Articles 6, 7, 8, 9, 11, 13, 14, and 15 apply to pupil-teachers as well as to students.

D. Greentree,
Secretary.

Office of the Council of Military Education,
13, Great George Street, S.W.,

Royal Military Asylum,
Chelsea, 10th March 1870.

J. B. St. C. Crosse,
Deputy Inspector-General of Hospitals.

(*c.*)—Scale of Diets issued to the Boys, Royal Military Asylum.

Breakfast.

6 ounces of bread.
½ „ „ butter.
1 „ „ sugar.
} „ „ tea in summer.
} „ „ cocoa in winter.
¼ of a pint of milk.

At 3.30. *p.m., daily.*

3 ounces of bread for each boy.

Dinner.

6 ounces of beef without bone, or
8 „ „ mutton (legs or shoulders).
6 „ „ potatoes in summer and 7 in winter.
3 „ „ bread.

The 6 ounces of beef or 8 of mutton is issued in winter only; during the summer 5 ounces of beef or 7 of mutton, as the boys will not eat more in the hot weather.

Supper.

6 ounces of bread.
⅔ of a pint of milk for the elder boys.
½ a pint of milk for the small boys.

The milk is boiled in winter and cold in summer.
The diet is varied daily throughout the year.

In Summer.

They have fruit pudding once a week as it comes in season, viz., rhubarb, gooseberries, and apples.
One day cold corned beef, lettuce and vinegar.
One day bread and cheese and lettuce.
The remaining four days—
Roast beef and potatoes once; roast mutton and potatoes twice; and once minced beef and suet pudding.

In Winter.

Plum pudding one day in the week.
Roast mutton and potatoes twice.
Roast beef and potatoes once.
Irish stew once.

Beef cut up and baked in a gravy with herbs and suet pudding once.
Boiled beef, soup, potatoes, with carrots, turnips, onions parsley, and celery, thickened with oatmeal and barley, once.

The cocoa issued to the boys is of a very superior description, prepared by C. J. Van Houten and Son, the retail price of which is 3*s.* 6*d.* per pound, but is supplied to the Asylum at the wholesale price of 2*s.* 3*d.* per pound.

Royal Military Asylum.

F.—REPORT OF AN INQUIRY INTO THE SANITARY STATE OF THE MODEL SCHOOL IN 1868.

PROCEEDINGS of a COMMITTEE assembled at the Royal Military Asylum, Chelsea, on the 20th August 1868 and subsequent days by order of H.R.H. the Field Marshal Commanding-in-Chief, dated 21st July 1868, for the purpose of inquiring into certain representations regarding the sanitary condition, &c. of the boys of the Royal Military Asylum, Chelsea.

PRESIDENT:

MAJOR-GENERAL FREDERICK W. HAMILTON, C.B., Commanding Brigade of Guards.

MEMBERS:

Colonel Sir EDWARD WETHERALL, K.C.S.I., C.B.
Colonel POCKLINGTON.

Deputy Inspector-General of Hospitals, H. MASSY, attended by order, with the view to affording assistance to the Committee upon all Medical and Sanitary points.

THE Committee having assembled pursuant to order, proceeded to inspect the boys' dinners, the new system of ventilation, and other improvements and additions lately made in various parts of the building. They subsequently made inquiries of the Commandant and the Surgeon (Mr. Crosse) of the establishment regarding the subjects referred for investigation, and in connexion therewith have the honour to remark—

1. Sanitary condition of the boys.

1st. As regards the sanitary condition of the boys, the Committee beg to attach a statement marked (A), drawn up by Dr. H. Massy, and to refer to his opinion thereon, in which the Committee fully concur. Mr. Crosse, the resident medical officer, considers that a low sanitary tone has hitherto pervaded the Asylum, and instanced the persistent infectious diseases that have been most prominent, such as scarlet fever, measles, scald heads, and other infantine diseases. It is reported, though there is a low rate of mortality among the boys, that they do not recover their strength after being attacked. This opinion is borne out by Dr. Massy. The Committee, however, trust that with the advantages recently offered by the opportunity of sending the most sickly boys to Netley (a practice which it is recommended should be still further carried out) coupled with the lately improved sanitary condition of the building, an amelioration may be expected in this respect.

2. Diarrhœa.

2ndly. As to the large number of boys at one time attacked with diarrhœa, though at first it was considered by the medical officer to have been caused by an unusual meal, that officer is now inclined to attribute it to the then very objectionable position of the urinals and waterclosets in close proximity to, indeed adjutting into, the dormitories. Those objections have been now removed.

3. Boys above two years in hospital.

Of the three boys that have been above two years in hospital, their diseases do not appear to have originated from any supposed unsanitary state of the Asylum. Two of the cases are attributable to a persistent scrofulous tendency from childhood, and one to a strong tendency to epileptic fits. In other hospitals incurable cases are generally removed. At the Asylum such cases are considered to have a claim to remain in the establishment (if the boys have no friends) until the age of 14. One boy is remaining above that age, being in the opinion of the medical officer still unfit to be removed.

Diet.

With regard to the allowance of meat not being eaten by many of the boys, the Committee had an opportunity of observing this to be the case in many instances. The practice prevailed more amongst the older than the younger boys. The Committee do not consider that this is attributable to any defect in the culinary department, in the quality of the meat, or in the want of varied modes of cooking it from day to day. Such a state of appetite often occurs, and the only means of overcoming the difficulty may be found in varying the articles of food themselves. Many boys who would not eat meat would eat an extra quantity of bread and butter, or porridge, &c. &c. As a criterion of the quantity of meat left unconsumed, amounts varying from 3*l.* to 5*l.* are amassed monthly from the sale of this refuse at the low rate of 1½*d.* per lb. This represents 800 lbs. of meat, or from 1,600 to 1,800 rations of meat left on the boys' plates unconsumed monthly; that is, above 50 rations per day, and the value of it is credited to the public. This saving might be appropriated for the benefit of the boys in dietary, or a partial change of diet might be introduced, by which no refuse or surplus would occur. The Commandant remarked upon the difficulty that might be encountered in having to prepare different dinners for different boys. The Committee, while recognizing some of the objections, do not consider them insurmountable, and would recommend the trial, as suggested in Dr. Massy's report. The Committee have appended dietaries of three establishments at Chelsea, Greenwich, and Dublin, marked (B), to which are attached some comments by Dr. Massy on the differences existing between them.

Ver

The improvements that have very recently been made in the ventilation of all the dormitories, as well as the extra accommodation afforded by the three large rooms in the attics of the centre buildings, containing 40 beds each, and the removal of the urinals and waterclosets from the dormitories to other localities, with independent ventilation, are of the greatest importance, and calculated most materially to improve the sanitary state of the Asylum. The special apertures for ventilation, 17 inches by 6, affording from 12 to 15¾ inches to each occupant, are reported by Dr. Massy as sufficient, and as much as could be borne in winter, in the absence of fires or stoves. The ventilation in the playrooms and in the workshops is still defective. The Committee would recommend an improvement in the construction of the latrines on the south side of the Asylum, and that Jenning's apparatus be substituted.

Acc dat doz

With regard to more space being required, though the addition of the three large dormitories, with 120 beds, has considerably relieved the smaller rooms, the boys do not yet enjoy the advantage of 600 cubic feet of air each, and it is stated by the medical officers that that amount is as necessary (if not more so) to the young boy as to the grown man (see Dr. Massy's report). Some of the rooms calculated for 11 boys are still accommodating 17. From copies of returns furnished by the Board of Works, and appended to these proceedings, marked (C), there appears to be at present a total of 241,344 cubic feet in the dormitories,

which give an average of 482 cubic feet to each of 500 boys. To give each boy 600 feet the present rooms would accommodate only 402 boys, showing a deficiency of 58,656 cubic feet. The additions which the Committee are informed by the Commandant have been suggested but not finally approved, viz., of a fourth large dormitory in the attics of the centre building, and of two small dormitories, would give 36,678 additional cubic feet, and afford accommodation for 61 boys, thus reducing the deficiency to 21,978 cubic feet, or the accommodation of 32 boys. The Committee would strongly recommend this addition to be made.

There are 130 boys sleeping in 65 double beds. As these could be replaced by 130 single beds, without waiting for additional rooms, the Committee would strongly recommend such change to be forthwith made.

The Committee observed no want of cleanliness in the boys at the period of their inspection, though many were pointed out as sickly looking. The Committee refer to Dr. Massy's report on this subject. From the evidence of the medical officer of the establishment, it appears true that cases have occurred, and that recently, of boys being found with vermin in their heads, notwithstanding the regulations as to bathing and washing, which appear good. Such cases were, it is reported, immediately attended to, and the nurses have been cautioned to be more careful.

The Committee do not consider the actual site of the Asylum to be insalubrious; it is on a gravelly soil and the neighbourhood is thoroughly well drained. There are open spaces in the vicinity. The Committee fully agreeing in the report of Dr. Massy on this subject, refer for further details to that officer's observations, as well as to the statistics showing the comparative mortality amongst male children from five to fifteen years old in the several districts in London.

With regard to the salubrity of the building itself, there is no doubt the former state of things was unsatisfactory, but favourable changes have been recently made, and further improvements are in contemplation. Thus, complaints of its unwholesomeness, formerly well grounded, are not now so manifest; and as the ameliorated condition of the Asylum becomes more apparent, it is reasonable to hope that the sanitary condition of the boys will likewise improve. To ensure this the more, it is recommended that immediate attention be directed to the better ventilation of the playrooms and workshops, in each of which latter some 80 boys work for two hours every evening. The Committee would suggest that the purity of the air in the dormitories, schoolrooms, workshops, and playrooms should be tested by Dr. de Chaumont, Assistant Professor at Netley.

The nurses are distributed by companies as follows:—

	No. of Company.	Strength of Company.	No. of Nurses.	Proportion.
				Average.
Older boys	1	120	1	1 to 100
	2	91	1	
	3	91	1	
Younger boys	4	64	2	1 to 32
	5	67	3	1 to 22
	6	67	3	1 to 22

This return shows that one nurse is appointed for each company of about 100 of the older boys who can take care of themselves, and is reported to be sufficient; one nurse to each 32 of the middle-aged boys, and one nurse to each 22 of the smaller boys, who are all more or less incapable of taking care of or of cleaning themselves. These nurses receive 6*d.* per diem, and 1*s.* a day in lieu of rations; they are lodged in the Asylum. They are not as a class favourably reported on, and frequent changes take place, owing to dismissals for misconduct or drunkenness. It was not intended by the Medical Officer to infer to the Members of the Council of Military Education that these nurses came from a low locality, but that they were of a low stamp, and that owing to the insufficient remuneration the better class did not offer themselves. An additional nurse to each of the two youngest classes, and a slight increase to the nurses' pay for length of service after six months or one year, combined with good conduct, certified by the Commandant, would, it is believed, procure a more respectable class of female attendants, and secure also better conduct while in the Asylum.

In connexion, however, with this question, the Committee wish to draw attention to the age of admission of boys at the Royal Hibernian Military School, which is seven years. The admission of children of the age of five at the Royal Military Asylum undoubtedly lowers the sanitary state of the establishment, and additional expense is incurred by the necessity of having recourse to nurses to superintend them. The Committee therefore recommend that the age of admission should be assimilated to that existing at the Hibernian School.

12. Boys unfit for military service.

The higher per-centage of boys found unfit for the army on leaving the Asylum as compared to those leaving the Royal Hibernian School is very evident and to be deplored, but it may partly result from a different standard of efficiency existing between the two places. It remains to be seen whether different results arise from the improved ventilation, &c. in the Royal Military Asylum.

13. Playgrounds.

The amount of space for the recreation and amusement of the boys as playgrounds is very limited, consisting generally of only gravelled yards, though it was stated that they were occasionally allowed on the grass in front of the buildings. It was reported that the boys were at certain periods of the year marched to Battersea Park, but it was ascertained that instead of being let loose to play and amuse themselves at games, they were only marched there and back again, the reason assigned being that if the ranks were broken the boys would never be brought home again.

The advantages of an unrestrained exercise to lads of their age cannot be too strongly advocated, and the Committee think that it is much to be desired that the boys should benefit more frequently and thoroughly by the close proximity of Battersea Park; also that they should have free access to the enclosure in front of the Royal Military Hospital in common with the public, from which it was reported by the Commandant that the boys were debarred; also that the green in front of the Asylum, in summer time especially, should be made available for the comfort of the boys, with the "parade ground" at all times open to them.

Conclusion.

In conclusion the Committee begs to summarize the recommendations to which it attaches the greatest importance:—

1st. The absolute necessity of providing 600 cubic feet of air, and 60 superficial feet, for each boy in the dormitories; and in order to ensure this as far as possible, the Committee recommend that no boys be admitted to fill up vacancies in the Asylum until the contemplated alterations alluded to in the report are completed, and further improved ventilation in the workshops and playrooms has been effected.

2nd. That the dietary of the boys should be more varied.

3rd. That the play and drill hours should not be less than six per day exclusive of meals.

4th. That the boys should be allowed to play on what is now the parade, and on the grass, in addition to their present playgrounds.

5th. That the boys should be taken to Battersea Park as often as practicable, for the purpose of play, and not merely for a parade march.

6th. That no boy be admitted to the Royal Military Asylum under seven years of age.

7th. That the present faulty construction of the latrines on the south side be remedied.

Enclosures accompanying the Report of the Committee.

(A.)

Army Medical Department,
6, Whitehall Yard, S.W.,
11th September 1868.

Sir,

In compliance with your instructions, I beg to forward, for the information of the Committee on the sanitary state of the boys of the Royal Military Asylum, the following observations upon the various points set forth in the letter of the 24th June last from the Rev. Canon Moseley and Colonel Pocklington to Major-General Napier, as to the unhealthy condition of the boys generally in the Royal Military Asylum, for which certain reasons are assigned by the surgeon of the establishment.

Sanitary condition.

On a careful examination of the boys, I came to the conclusion that as a rule they are not so strong and robust looking as boys at their ages, well clothed and fed, should be; and a perusal of the extended correspondence, to which I have been allowed access, evidences that this has been frequently remarked upon before, and that the institution of a comparison with boys at the Royal Naval School at Greenwich and the Hibernian School near Dublin shows that boys at the two latter establishments, of the same age, are taller and weigh more than those at Chelsea; and further, that during a residence of 6½ years at Chelsea a boy only gains 30 lbs. in weight, whereas at the Hibernian School he gains 41 lbs.

Appendix III. (F.)

Royal Military Asylum.

Comparative military efficiency. Admissions into hospitals.

From a return obtained from Chelsea, it appears that 19·3 per cent. of boys have been found unfit for military service during the last six years, and only 11·1 at the Hibernian School for the same period.

The maximum number that has been reported sick on any one day during the last three years at the Royal Hibernian School is stated to have been nine, whereas the large number of 180 is reported as not uncommon at Chelsea.

The following is a statement of the number of admissions to hospital and their proportion to strength in the three establishments, deduced from the statistics of the years 1866 and 1867:—

	Strength average 1866 and 1867.	Admissions average 1866 and 1867.	Deaths average 1866–67.	Admissions to 100 of strength.
Royal Military Asylum, Chelsea.	493	496	1	100·6
Greenwich School	793	717	1·5	90·4
Royal Hibernian School, Dublin.	401	161	1	40·1

From the accompanying analysis of most numerous causes of admissions will be seen the very remarkable difference in favour of the Hibernian School as regards admissions for scarlatina, measles, small pox, scaldhead, and chilblains.

The return for the latter establishment for 1865 is equally favourable; but as only two years' returns are available for Chelsea and Greenwich, it has not been used.

It would appear a fair inference from the large number of admissions for constipation at Greenwich, that boys are admitted into hospital for very slight causes.

Principal Causes of Admissions during the two years 1866 and 1867.

Diseases.	Chelsea Asylum, average strength, 493.	Greenwich School, average strength, 793.	Hibernian School, average strength, 401.
Measles	181†	—	42†

Phthisis	—	1	2
Average annual deaths per 1,000 of strength	2·03	1·88	2·49

If these boys are from the same class of life, and under the same circumstances in other respects prior to admission to these establishments, the discrepancy would clearly point to some insanitary condition connected with the Chelsea Asylum.

The comparison in favour of Greenwich is explicable, I believe, independent of the institution, from the fact that soldiers' children are in a large proportion born in hot climates, often inimical to health, especially of children—a condition to which the boys at Greenwich are much less subject. The same cannot, however, be said of the boys in the Hibernian School, which, as far as I am aware, must be very similarly situated as those at Chelsea prior to admission thereto.

The foregoing would appear to corroborate the premises that the boys at Chelsea are not as healthy as they ought to be, and it becomes necessary to review the sanitary conditions of the institution, and, as far as practicable, to suggest improvements where requisite.

Salubrity of site.

The Asylum at Chelsea is built upon gravel soil, and is stated to be efficiently drained. The site comprises only 10 acres.

It lies low; but Chelsea Hospital and grounds are between it and the Thames.

The vicinity is fairly open to the south and south-west, including the grounds of Chelsea Hospital, the river and Battersea Park.

* 95 in 1867. † All in 1867.

It is somewhat open also on the west, but is closed by a poor neighbourhood in other directions, especially on the east.

Relative mortality of boys in various London districts.

The accompanying table shows the relative mortality of boys of nearly the same age as those in the Royal Military Asylum in several of the London districts, including Chelsea.

It will be seen that the mortality in Chelsea is less than the average of these districts, taken indiscriminately from the return of the Registrar-General.

Nevertheless I am clearly of opinion that no establishment so situated in a large city can be as healthy, or as suitable for the development of children into robust manhood, as one placed in a well-selected rural district.

Average annual rate of mortality from all causes between the ages of 5 and 15, to 100 living, during the 10 years 1851–1860; males only. From page 64 of the supplement to the 25th annual report of the Registrar-General, 1864:—

Chelsea	1·406
Kensington	1·247
St. George's	1·354
Westminster	1·523
St. James's	1·774
Hampstead	1·265
Islington	1·408
St. Giles'	1·832
Holborn	1·534
St. Luke	1·564
W. London	0·549
Shoreditch	1·349
Whitechapel	1·654
Stepney	1·565
Average for England	1·339
Average for London	1·422

Cubic space and ventilation.

The cubic space and means of ventilation have been described heretofore as very insufficient.

It is said that the former amounted only to 341 cubic feet per boy. Many of the dormitories are badly constructed; they are low, back to back, and with windows at the end; such a cubic space, with indifferent ventilation in these dormitories, was, in my opinion, very inadequate and calculated to be injurious to health.

I am of opinion that 600 cubic feet should be given to each boy, and a superficial area of between 50 and 60 square feet. It is recognized that in proportion to the weight of the body the activity of the respiratory process is far greater in children, and 600 cubic feet are as necessary to meet the physical growth of a boy and develop a healthy constitution in after life, as they are to preserve the health of an adult soldier; and the fact that many of these boys have been born in tropical climates, and badly fed and lodged prior to admission to the Asylum, are additional reasons why they require to be placed under good sanitary conditions.

It is stated that by the proposals made to increase the accommodation in the dormitories, 600 cubic feet will be provided for 468 boys, and it is added that the number remaining (32) will be usually in the infirmary. Less than this would certainly not be conducive to health.

In the dormitories the proposed system of ventilation will, it is stated, give an area of inlet and outlet by special apertures for ventilation, exclusive of doors and windows, of over 15 square inches to each occupant in all the rooms, except in the south side in the rooms of which 12 square inches will be given to each boy.

There are no fireplaces or stoves, nor is it intended to heat the air in any of the dormitories, wherefore my experience induces me to believe that during the winter months this will be as much as can be borne at night. In summer by opening a portion of the windows, the ventilation can be largely increased. Were hot air introduced, or means provided for heating the air in the rooms, a much larger area for the admission of fresh air from without might be provided, and would, I believe, be an advantage; but such an alteration would necessitate the provision of ventilating grates or stoves, or hot-water pipes, which would entail considerable expense, before incurring which I would recommend that the ventilation now provided, and being introduced, be subjected to practical test, and if found still defective some more suitable provision could be made.

Ventil in wo shops.

I would further observe that more ventilation is requisite in the workshops, playrooms, and dayrooms. I believe, however, that in nearly all of them this might be obtained by louvred panes in the windows. In a few instances it might be necessary to introduce other means, as in the back wall of the south playroom.

Latrin

The latrines in the open air south side were very offensive the day of our visit. They are water latrines, said to be regularly flushed; if the latter is the case they must be defective in construction, either from the large surface exposed or incomplete trapping.

I would beg to recommend Jenning's latrines to be substituted.

Those on the north side were not so offensive.

Recre groun

I would invite the Committee's consideration to the question of increasing, if possible, the recreation grounds. It is stated that in the case of the Hibernian School the Phœnix Park renders the space practically unlimited. At Chelsea a large space is apparently retained as a drill ground.

I would recommend its being added to the ordinary playground, by which I cannot recognize how it would be rendered less useful for drilling. I would also suggest that the green space in front of the institution be during the summer months, in the heat of the day, made more use of for recreation.

The shade afforded by the trees would be of great advantage; and injury to it, I imagine, would be avoided by proper precautions.

Advantage should be taken as much as possible of localities in the vicinity, for exercise and recreation.

Rec and

I would strongly urge upon the Committee, that as Chelsea Asylum contrasts unfavourably with the Hibernian School in position, the attention of those vested with the control of the former should be directed to the necessity of considering the health of the boys, as paramount to application to work or study.

It has not been hinted that either have ever been excessive, but

I believe it my duty to direct attention to this, as a cardinal feature in preserving the health of the boys, which contrasts so unfavourably with other institutions.

In furtherance of this object I would express a strong opinion that annually a large number of these boys should be sent to the sea-side.

Twenty were sent this year with an understanding that after a short residence they were to be relieved by a similar number.

I would recommend that this migration to the sea should commence annually on the 15th May, and the boys to return on the 15th October; that three relays of boys amounting to a total of 100 should benefit by this change within this period; as there is always room at Netley or elsewhere, the extra expense would mainly consist of conveyance, third class by rail.

As regards the boys not eating their meat at Chelsea, it does not appear that this is observable to anything like the same extent at Greenwich, or the Hibernian School.

It may be to some degree due to the want of appetite of the boys from less vigour of constitution than in the other establishments; but boys are not admitted to the Hibernian School under 7, or to Greenwich under 10, whereas they are admissible to Chelsea at 5, and it is but fair to observe that the admission of such young children must tend, more or less, to the unfavourable health contrast of the latter with the two former schools.

The nutritive equivalent of the rations at the three establishments is not very dissimilar.

Attached are scales of diet for reference, likewise a few comments on the difference.

It appears that the ration scale for Chelsea is not always adhered to.

I would only observe on this point that during the summer it might be advisable to substitute some light dinner in lieu of meat on a third day in the week for a large proportion of the boys who do not consume the latter.

I saw no evidence of uncleanliness, and if the regulations regarding bathing and ablution are complied with, none ought certainly to exist.

Each boy should have a separate bed.

The foregoing recommendations appear to me to embrace the more important sanitary questions regarding the health of the boys in the Royal Military Asylum, and if carried out cannot, I think, but exert a favourable influence on their health and physical condition; but if a decided improvement does not result after a reasonable time, I would suggest for consideration whether this was not attributable to the urban position of the institution.

I have, &c.

DIET.

Chelsea and Greenwich.

1. The breakfast at the Royal Military Asylum differs from that at the Greenwich School in having ½ oz. of butter. The boys also have tea in lieu of cocoa as at Greenwich.

2. At 3.30 3 oz. of bread are given at the Royal Asylum to which there is no equivalent in the Greenwich School.

3. At supper again the Chelsea boys have 1 oz. more bread, but they have milk for supper; whereas the Greenwich boys have tea (with milk and sugar), and butter with their bread.

4. The allowance of meat and potatoes for dinner is the same in each during winter, but the Greenwich boys get 1 oz. more meat than at the Royal Military Asylum during the summer; they have also 1 oz. of bread more. On the other hand the Chelsea boys have fruit puddings during the summer (6 oz. flour, 1 oz. suet, 1 pint apples, to 1 oz. sugar), and apparently greater variety in the winter. At Greenwich, however, they have maccaroni and barley soup every Wednesday, and pease soup in the winter every Saturday, as well as suet pudding in lieu of potatoes two days a week.

DIET.

Chelsea and Hibernian School.

1. At the Hibernian School the breakfast consists of milk (¾ pint) and bread (½ lb.), instead of tea and bread and butter, as at Chelsea.

2. The supper both at the Hibernian School and at Chelsea consists of bread and milk, but the Dublin boys get the largest quantity (⅓ pint more milk, and 2 oz. more bread); but at Chelsea they have 3 oz. of bread in the middle of the afternoon.

3. At the Hibernian School the boys have meat (½ lb.) for dinner four times a week; baked, with potatoes (¾ lb.), onions, salt, and pepper, on Sundays and Thursdays; boiled, with potatoes (¾ lb.), and 1 pint soup, on Tuesdays and Saturdays. They have bread (½ lb.), butter (1¼ oz.), and cheese (1½ oz.), two days, and suet dumplings with treacle one day. They have no bread on meat days, but twice the quantity of potatoes the boys at Chelsea have. There are no fruit puddings. At Chelsea there is no soup during the summer. At Chelsea they appear to have five meat dinners, and only one bread-and-cheese dinner (accompanied with lettuce), and one pudding dinner.

ROYAL MILITARY ASYLUM.

Scale of Diets issued to the Boys.

Breakfast.

6 oz. of bread.
¼ „ of butter.
⅛ „ of tea 3 months, and cocoa 9 months.
½ „ of sugar.
⅓ quart of milk.

Dinner.

In winter	6 oz.	of beef without bone, or
	8 „	of mutton (legs and shoulders).
In summer	5 „	of beef without bone, or
	7 „	of mutton (legs and shoulders).
Throughout the year	6 „	of potatoes.
	3 „	of bread.

When apple pudding.

For each boy	6 oz.	of flour.
	1 „	of suet.
	1 pint	of apples.
	1 oz.	of sugar.

At 3.30 p.m. daily—3 oz. of bread each boy.

Supper.

6 oz. of bread.
¾ of a pint of milk for older boys (300).
¼ a pint of milk for small boys (200).

The milk is boiled in the winter, and cold in the summer.

During the summer they have fruit pudding once a week, as it comes in season, viz., rhubarb, gooseberries, and apples. One day bread and cheese and lettuce, and one day boiled salt beef and cabbage.

In the winter they have plum pudding, Irish stew, beef soup and potatoes, with carrots, turnips, and parsley, thickened with oatmeal and barley; and minced beef, and suet pudding.

Also, in summer, one day cold corned beef, lettuce and vinegar; when lettuce cannot be procured, potatoes.

(D.)

1st. A return showing the measurements taken by the Board of Works, a few months since, of the attics and dormitories at the Royal Military Asylum, and of the two dormitories proposed to be added.

2nd. How many square inches of inlets and outlets for air by special apertures for ventilation it is intended to provide in each dormitory for each occupant?

3rd. What would be the amount of superficial area per boy in the dormitories were 600 feet of cubic space given to each?

1st. Annexed is a copy of the return from the Board of Works of the measurements of all the dormitories now occupied by the boys. The proposed new attic will contain 23,692 cubic feet, and the two rooms now used as quartermaster's stores, 6,532 and 6,456 cubic feet respectively.

2nd. The special apertures for ventilation have been completed, and are each 17×6 inches. In the three attic dormitories there are in each six apertures, providing for each occupant 15¾ square inches. In each of the rooms on the north side there are two apertures, giving to each boy 15¾ square inches. On the south side each room has also two apertures; in six of the rooms each boy has 12⅝ square inches, and in the other six rooms 12 square inches.

3rd. The present accommodation, together with the proposed additions, will afford 600 cubic feet only to 468 boys, and, as all the dormitories are about 10 feet high, the superficial area for each boy will be about 60 square feet.

Appendix III. (F.) Royal Military Asylum.

APPENDIX IV.—ROYAL HIBERNIAN MILITARY SCHOOL.

Appendix IV. (A.) Hibernian School.

A.—QUESTIONS AND REPLIES ON THE SUBJECT.

Questions issued by the Commission.

I. Will you be good enough to give, for the information of the Commission, a general account of the objects of the Royal Hibernian Military School, its constitution and government, its present staff and establishment, the mode and conditions of admission to it, the number of pupils, the nature and length of the course of instruction, and the regulations for the maintenance of discipline?

II. What is your opinion regarding the conditions and mode of admission to the school? Do you consider that any alterations in the present regulations on this subject are desirable?

III. Do you consider that either the course or the method of instruction at the school is capable of improvement?

If so, what alterations would you suggest?

IV. Will you express your opinion regarding the present organization of the establishment, the powers of the Governing Body and Staff, the position and authority of the instructors, and the state of discipline among the pupils?

V. Do you consider that the accommodation and messing provided for the pupils, and the general sanitary state of the school, are in all respects satisfactory; or would you suggest any improvements in these respects?

VI. Will you state your impressions, from what is known of the subsequent careers of the pupils, regarding the results of the education given at the school, and the advantage of the institution to the service?

VII. Will you favour the Commission with a brief statement of any suggestions which you may think it desirable to make in regard to the Hibernian School?

The above questions, with the exception of No. I., which was forwarded only to the Commandant, were addressed to—

Lieut.-Colonel Wynyard, Commandant of the School.
General the Right Hon. The Lord Strathnairn, G.C.B., Commander of the Forces in Ireland.
Lieut.-Colonel T. B. Speedy, Secretary and Adjutant.
J. H. Gibbons, Esq., Head Master.
Lieut.-General George Colomb, formerly Commandant of the School.
The Rev. G. R. Gleig, M.A., Chaplain-General to the Forces.

Question No. V. was also addressed to Deputy Inspector-General of Hospitals R. Templeton, M.D., Surgeon to the School.

(i.)—Answers received from Lieutenant-Colonel Wynyard, Commandant of the School.

I.—The charter at present in force was enrolled in the High Court of Chancery, Ireland, on 22nd December 1846.

A copy accompanies this report, and serves to show as follows:—

In the ninth year of the reign of George III., a body politic and corporate, "by the name of 'The Hibernian "Society,' in Dublin, for maintaining, educating, and "apprenticing the orphans and children of soldiers in "Ireland for ever, and by the same name to have perpetual "succession," was incorporated by Letters Patent enrolled in the High Court of Chancery in Ireland.

From time to time, *i.e.*, on
6th February, 48 George III., 1808.
7th December, 59 George III., and 1818.
4th March, 4 Victoria, 1841.
other letters patent were similarly enrolled; and on 22nd December 1846, the body corporate and politic having "besought" the Queen to grant new letters patent, the present charter was enrolled in the High Court of Chancery in Ireland, appointing certain Governors (specified in List A. of Enclosures to this Report*) "anything in the said former "Letters Patent to the contrary thereof in anywise not- "withstanding, to be one body politic and corporate in "deed and in name, for the care of soldiers' children, by "the name of the '*Royal Hibernian Military School.*'"

Present charter, 1846. Appointing new corporation of governors.

The President, the Lord Lieutenant of Ireland.

The Vice-President, the Commander of the Forces or General Officer Commanding in Ireland.

The president and vice-president.

The present staff and establishment are on "B." of Enclosures.†

Present staff and establishment.

The mode and conditions of admission to the staff and establishment are as follows:—

The mode and conditions of admission to it.

The Commandant, the Adjutant, and Secretary, and the Surgeon or Medical Officer are appointed by the Commander of the Forces in Ireland, with the sanction of the Commander-in-Chief, and on the conditions "that the officer "appointed to be commandant shall not be lower in rank "than a lieutenant-colonel, and the person appointed to "be adjutant and secretary shall not be lower in rank than "a captain, such officers so to be appointed by the Com- "mander of our Forces to be considered as purely military "officers or appointments, and in rank equal to staff "appointments."

Appointment of certain officers.

The body corporate appoint other officers and servants.

Other officers and servants.

At their annual general meeting the body corporate nominate and appoint "seven" of their body, in conjunction with the vice-president, to be a committee, to meet at least once in every month, "to carry into execution such orders, "rules, and directions as shall from time to time be made "by the said corporation."

"Committee of seven" governors for the year to carry out orders, &c.

The mode and conditions of the admission of pupils to the institution are as follows, viz.:—

Admission of pupils.

The father or the surviving parent or the guardian of a child seeking admission is required to prefer a petition (Form "C." of the Enclosures‡) as approved by the corporation to the Governors through the secretary, signing an agreement that "the said boy shall remain in the Royal "Hibernian Military School as long as the Governors "thereof shall think fit; and that when of a proper § age "he shall be disposed of at their discretion, as an appren- "tice or servant, or placed, with his own free consent, as "a private soldier in the regalar army."

Mode and conditions.

On the petition being found to be as correctly filled in and as fully vouched as circumstances seem to admit—more particularly as regards the provision of the charter that the boy be "the child of a non-commissioned officer "or soldier of the line, or of a non-commissioned officer or "soldier deceased or discharged"—a notice (Secretary's Form "D." of Enclosures ‖) is sent to the petitioner, showing that the application "has been entered on the list with

* See page 178. † See page 178. ‡ See page 178.
§ Boys quit the school at 14 years of age, by direction of the Governors and with the concurrence of the Secretary of State for War.
‖ See page 179.

Appendix IV. (A.)

Hibernian School.

"others, to be brought under the consideration of the "Governors for admission to this asylum as vacancies "occur and the claims merit."

From this so-called general list of applicants (above 170 at present) there are extracted, monthly as a rule, by the commandant, about 30 or 40 names constituting a "list of "boys submitted as recommended for admission," from which the committee of Governors at their monthly meeting select about a dozen to fill vacancies existing or shortly expected. At these meetings the general list is at hand, with sundry particulars, should the committee, as sometimes happens, require further information as to these or other candidates for admission whose claims may have been brought to their notice.

In these lists the ages of the children are respectively given, together with the services of the fathers, and the number of children in each family. "There is also a column "with the Commandant's remarks, which sometimes con- "tains" (the Committee have stated) "not the least "important information to aid the Committee in their "selection, for a boy whose father was discharged on ac- "count of severe wounds, for example, might naturally "secure the preference of the Governors, even though "there may be other boys of a superior class in the list, "but with no such concurrent claims."

The Committee sometimes have regard also to the advanced age of a boy towards disqualification (for a child is inadmissible over 12 years of age) should there be anything in the services of the father to justify their special consideration.

The religion of the respective candidates for admission is never known to the Committee, and the lists afford no clue to it.

The following extract from the charter shows the rule which governs the Committee's selections *in general*.

"And our further will is, and we do hereby direct that in the selection of children for admission, preference in general shall be given:

First. To orphans.

Secondly. To those whose fathers have been killed or have died on foreign or home service.

Thirdly. To those that have lost their mothers, and whose fathers are absent on duty abroad.

Fourthly. To those whose fathers are ordered abroad on foreign service, or whose parents have other children to maintain."

By direction of the Governors (and in conformity with the desire of the Secretary of State for War) the children to be admitted into this institution must be "*free from "mental or bodily defect or infirmity*," and must not be under *seven* nor above *twelve* years of age, and must quit the school at 14.

Number of pupils.

The number of pupils is 410, and they are posted in four divisions for school, and in six companies for military instruction and discipline.

Nature and length of the course of instruction.

Religion.

A church of England chaplain and a Roman Catholic clergyman are attached to the institution, and a Presbyterean minister at present attends to impart religious instruction and hold divine service, &c.

They give religious instruction to their respective flocks on every Wednesday for 1 hour, and on every Saturday for 2 hours, in the forenoons.

School.

All the pupils attend school in four divisions, time tables for which (with a memorandum of the course of instruction) are in Enclosure E.*

Drill.

For military purposes the pupils are in six companies with a "serjeant assistant" in charge of each.

In Summer.

7 to 7.30 a.m., setting up drill for all hands,
4 to 4.30 p.m., ditto for boys not otherwise employed,
5.45 to 6.15, battalion drill for all hands,
Or one hour and a half daily in the aggregate.

In Winter.

4 to 4.30 p.m., marching or company drill for boys not otherwise employed.

Summer and Winter.

Before marching down from the dormitories, 5 minutes drill at the "extension motions."

Gunnery, including knotting and splicing ropes.

These subjects are taught by one of the six "serjeant assistants," a pensioner (Serjeant Murray) from the Royal Artillery.

The "gunnery class" consists of from 25 to 30 boys.

They are taught the practical part of field-gun exercise with the two three-pounder guns we have for the purpose.

Also questions on gunnery, the weight and length of guns, with the different dimensions of the Armstrong and smooth-bore gun, weight of shot and shell, the different compositions used in filling tubes and fuses, the different charges of powder for all sized guns; also the use of the different material used in mounting and dismounting guns, triangular gyns, shears, rollers, skidding from the models we have for the purpose; also to tie all the knots used in artillery service, to splice ropes, and to tell the dimensions of the different sized ropes, and the weight they will bear respectively.

Time allowed.—*In Summer.*

Mondays, Tuesdays, Thursdays, and Fridays,
From 4 to 4.30 and 5.45 to 6.15 p.m.,
4 hours weekly.

In Winter.

Mondays, Tuesdays, Thursdays, and Fridays,
From 4 to 4.30 p.m.
2 hours weekly.

Marks (60 maximum) are awarded for "gunnery" at the annual examinations for the "*Crimean Banquet Fund Prizes*," in June.

Swim

The "swimming class," so called, numbers from 40 to 50 boys, but all the boys become swimmers by degrees. The fine bath is $56\frac{1}{2} \times 35$ feet, with a depth of $5\frac{1}{2}$ or $4\frac{1}{2}$ feet (at one end, and shallowing $1\frac{1}{2}$ foot to the other) in a large room 70×44 feet, with lofty glass roof.

Marks (50 max.) are awarded for diving, swimming under water, on the back, and plain swimming at the annual examinations for the "*Crimean Banquet Fund Prizes*."

The "time" allowed is merely nominal, before breakfast.

Gymnastics.

The "Gymnastic Class" numbers from 45 to 50 boys.

The "Plant" is very simple, it consists of single and double bars, wooden horses, perpendicular and sloping ropes, planks, poles, and ladders, to most of which, together with three "fly poles," all the boys have access for amusement and voluntary practice when they are on the playground. Some of the boys, by these means, become very expert at climbing, &c.; the object in view, however, is not to form acrobats, but to assist in developing health, muscle, and activity, for which I consider the sort of "plant" we have well adapted, especially the "*fly poles*." Tan is spread beneath for safety and economy.

Marks (50 max.) are awarded for "gymnastics" at the annual examinations for the "*Crimean Banquet Fund Prizes*."

Time allowed for the class, one quarter of an hour daily, before breakfast.

"Ban instru

Band instruction is given on every week-day, excepting Saturday, from 4 till 5.30 p.m., by the "sergeant-instructor of music" (or bandmaster).

There are 47 boys under this instruction, and 4*s.* 11*d.* is allotted and distributed in small sums weekly to the most attentive and deserving pupils.

Marks (150 max.) are given for "instrumental music" (theory and practice) at the annual examinations for the "*Crimean*" prizes.

Vocal music

Nearly all the boys go in for "vocal music" before they quit the school, but there are about 170 always under the instruction of the visiting "singing master," from half-past 11 a.m. to 1 p.m., on Tuesdays and Saturdays, in the theory and practice of vocal music.

Marks (50 max.) are given for "vocal music" at the examinations for the "*Crimean*" prizes.

Bugle and d instru

Bugle, fife, and drum instruction is given on every week-day, excepting Saturday, from 4 to 5.30 p.m., by the "drum-major." There are 72 boys under this instruction, and 6*s.* 10*d.* is distributed weekly to the most attentive and deserving.

Marks, (60 for bugle, 60 for fife, and 60 for drum, the maximum) are given at the examinations for the "*Crimean*" prizes.

Shoemaki

The "shoemaking class" numbers 40. Of these, 20 attend one day, and 20 the next working day, for instruction, from 2 till 5.30 p.m., and so, as there are but five working days weekly here for the "trades' boys," each batch of 20 works five days a fortnight.

The boys of this school are kept shod by contract, part of the bargain being that the contractor shall send competent persons to instruct these classes in repairing and making the boots as far as is practicable with such young boys. Thus as many boys as we can spare learn the rudiments of the craft and can easily take to such work again if required. The institution does not profit much by their work and therefore they get no money for it. However;

* See page 179.

Marks (60 max.) are given for "shoemaking" at the examinations for the "*Crimean*" prizes.

There are at "tailoring" in the

1st Class - 30
2nd Class - 82

Total 112 boys.

who, as the "shoemakers" do, work in two batches and on alternate afternoons for 3½ hours each day. 7*s.* 2*d.* is allotted weekly and distributed in small sums to the most attentive and deserving of the 1st Class only.

The clothing of the boys is all, even to their caps, made in the shop by the "sergeant tailor" and "the sewing machine girl," and the 1st Class boy tailors.

The assistant tailor and the 2nd Class effect the repairs.

Marks (75 max.) are given for "tailoring" at the examinations for the "*Crimean*" prizes.

The carpentry department is just out of gear, but when in proper order eight or ten boys are under an "Instructor "of handicrafts," and work at the same hours as the other "trades' boys."

Marks (50 max.) are given for "carpentry" at the examinations for the "*Crimean*" prizes.

The standing rules for the maintenance of discipline are the "rules and regulations" as revised in 1854 and printed at the end of the accompanying copy of the charter.

I may add that discipline is maintained by as close an adherence as possible to the usage of the army, the chain of responsibility being much the same as in a regiment.

The Commandant is empowered to suspend until next meeting of the committee any of the officers (not holding commissions), non-commissioned officers, assistants or servants, whose conduct may deserve it.

No corporal punishment takes place except in the presence of the Commandant or his representative.

The punishments are at the discretion and on the responsibility of the Commandant, for boys, as follows:—

Reduction for sergeants and corporals, involving the loss of the small rate of pay attached to rank.

Deprivation of "good-conduct badge" and pay. Stoppage of pay (trades' boys and musicians). Bread and water for one or more meals a day.

Drills, one or two.

Cane, on the trowsered breech, two to six strokes administered by the orderly sergeant in presence of the Commandant or his representative.

Birch, on the bare breech, 7 to 21 strokes administered by the orderly sergeant in presence of the Commandant or his representative. (Birch is very seldom administered, being reserved for insubordination and for dishonourable conduct.)

Cells, solitary, for a few detached hours by day, and only in summer. (This punishment is only for boys who have broken out of the Institution, and then chiefly for security until they can be dealt with.)

Rewards for good behaviour tend also most materially to maintain discipline; boys being remarkably appreciative of justice, rewards, to bear their full value, must be conferred consistently and as much by rule as possible.

The rewards at this school are as follows, viz.:—

Promotion to lance-corporal (there are 18 lance-corporals).

Promotion to corporal (there are 18 corporals).

Promotion to sergeant (there are 6 sergeants).

Promotion to colour-sergeant (there are 2 colour-sergeants).

Liberty to walk in the park daily on certain conditions.

Liberty, when two months clear of the "defaulter-book," to go to town on half-holidays, weather permitting.

"Good-conduct marks" (with small pay attached). In my opinion no rewards have more conduced to the maintenance of discipline than those last mentioned (the "good-"conduct marks"), which were established, after having originated, I am told, with General Colomb, by my excellent predecessor, the late Colonel Mylius, in 1860, under rules ("F" in Enclosures *) which have been in force ever since and have never required modification.

The "Crimean Banquet Fund Exhibitions" should also be noticed as being a valuable aid to discipline, not less than 200 out of 2,000 marks being attainable for "conduct" by competitors. (An account, and the rules of these prizes will be found at "G" in the Enclosures.)†

II.—I am of opinion that the conditions and mode of admission to the school are just and considerate; and that as they are supervised closely by governors of military position and experience, every reasonable assurance is afforded to the public and to the army that the sons of the most deserving soldiers are admitted as speedily as possible, preference in general being given in accordance with the classification laid down in the charter.

APPENDIX IV. (A.)

Hibernian School.

III.—I cannot suggest any alteration either in the course or method of instruction. They both seem to me exactly suited for soldiers' sons intending, as almost all of them do, to join the army. Of 983 now in the army, and formerly in the R.H.M. School, 251, or more than one-quarter, have been promoted from the ranks, and yet about 276 of the 983 are still under 18 years of age; another large proportion are detained as musicians in the regiments, and thus cannot (but with few exceptions) be non-commissioned officers.

Opinion of the course and method of instruction at the school.

These results alone would deter me from proposing alterations of the course and method of instruction, more particularly as they seem quite to bear out the opinion of the examiners for the "Crimean" prizes in 1866, when those gentlemen thus expressed themselves,—"Whilst a degree "of proficiency considerably above the average, and which "reflects great credit on the head master, Mr. Gibbons, "has been realized in the several subjects of the school "course, w were particularly gratified to observe that "marked excellence had been attained in those most "important points of primary education—reading and "arithmetic—indeed, we had ample evidence that the "instruction imparted in the Royal Hibernian Military "School is of a thoroughly practical nature, and in our "opinion well adapted to the course of life which the boys "are likely to adopt."

The accompanying return ("H" of Enclosures *), compiled from the regimental returns last received here, will show the different grades in which the pupils from this school are now serving the army.

IV.—I consider the present organization of the establishment good; the powers of the governing body and staff ample (for all strictly institutional purposes); the position and authority of the instructors, what they should be; and the state of discipline among the pupils excellent.

Opinion regarding the present organization of the establishment.

V.—I consider the accommodation provided for the pupils satisfactory except in the following respects.

Opinion of the accommodation and messing.

1. The shed on the playground does not afford sufficient shelter (as the "management" have for the last five years urged on the face of the annual estimates).

A proper shed would afford immediate shelter from the sudden squalls which sweep our position here, and would thus serve to economise health, clothing, time and trouble.

At present we have only a low shed of but 1,111 square feet superficies, whereas for our establishment of 410 boys, there should be as large a shed as the lay of the ground and other requirements will permit, say 4,500 square feet superficies, with a somewhat higher roof than that of the present shed.

2. The play or recreation room should be extended to the front of the building for space, light, and air—when the accommodation in other quarters admits of the present "offices" being removed—as some day it may.

Pupils messing.—I consider the messing provided for the pupils sufficient under present and ordinary conditions. It is governed chiefly by sanitary considerations, and though the commuted allowance for it (as arranged annually by the Secretary of State for War) has to be conformed to, I have always told the medical officer that I am prepared to recommend an increase, which I feel sure would be granted, at any moment should he consider a more liberal dietary desirable for the boys.

A table of the dietary given the boys at present is at "J" in Enclosures.†

VI.—From what I know of the subsequent careers of the pupils my impression is that the results of the education given at the school are very satisfactory, especially to the army (as will have been seen at reply III.), and such as might reasonably be expected from the fact that about 90 boys go from hence annually (at the age of 14), most of them well *grounded* in the principles of religion and all those other branches of useful knowledge which are best calculated to promote their welfare and the benefit of the State.

Advantage of the institution to the service.

VII.—1. Discipline and security demand that the boundary of the institution should be better fenced.

Suggestions.

The nature and condition of the outer fence, instead of affording due protection, rather invite trespass from without and egress from within.

This has been represented annually on the face of the estimates to the "Board of Works," but the result has been only unsightly, ineffective, and expensive patchwork.

2. I consider that there should be a fixed scale of progressive increase of pay, carrying proportionate rates on retirement for such of the 6 "sergeants-assistant" as may be recommended by the Commandant for having dis-

Form of Petition, Certificates, and List of Questions.

Religion of the { Father / Mother }

Dated at 18

To the Right Honorable and Honorable the Governors of the "Royal Hibernian Military School."

The humble petition of in behalf of aged years,

Showeth

That the said the lawful child or children of , soldier of Her Majesty's Regiment of as by the annexed certificates will appear.

Names.	Age.	Names.	Age.
* Here state the names and ages of every child.			

Your petitioner therefore humbly prays that the said may be admitted into the Royal Hibernian Military School; and if this prayer be granted, your petitioner hereby agrees that the said boy shall remain in the Hibernian School as long as the Governors thereof shall think fit; and that, when of a proper age, he shall be disposed of at their discretion, as an apprentice or servant, or placed, with his own free consent, as a private soldier in the regular army.

The parent or person who has charge of the child to sign here. _____

And state if the boy is intended for the army _____

_____

Certificate and Recommendation.

I hereby certify that served in Her Majesty's Regiment of

* Here state if the soldier is now serving, or if discharged, when, and the rate of pension.

years, during which time he conducted himself as a good soldier, that he* _____

_____

_____

_____

To be signed by the Commanding Officer of the Regiment or Depôt.

I certify the child claiming admission has been always brought up in faith.

To be signed by a clergyman or a magistrate.

_____

I certify, according to the best of my knowledge and belief, that the several circumstances contained in the petition are truly stated.

When not signed by an officer, to be signed by a magistrate, or a clergyman and two respectable householders.

_____

_____

_____

N.B.—The children to be admitted into this institution must be free from mental or bodily defect or infirmity. They must be the children of a non-commissioned officer or soldier of Her Majesty's regular forces, or of a non-commissioned officer or soldier deceased or discharged. Children to be admitted must not be under 7 nor above 12 years of age. A Church of England chaplain and a Roman Catholic clergyman are attached to the institution, and a Presbyterian minister at present attends to impart religious instruction and hold Divine service.

Girls are inadmissible.

A Marriage Certificate

Signed by the officiating minister of the parish, must be annexed to this in original. Where it cannot be had, the reason is to be assigned; and in that case the commanding officer or a magistrate is to certify the place and date of marriage, according to the best information he can obtain.

A Certificate of Birth and Baptism,

Signed by the officiating minister, must be annexed to this in original. Where it cannot be had, the reason is to be assigned; and in that case the commanding officer or a magistrate is to certify the place and date of the birth of the child, according to the best information he can obtain.

Name of every Child.	Age.		Date of Birth.	Date of Baptism.
	Years.	Months.		

Royal Hibernian Military School,
Phœnix Park, Dublin.

Sir, 18

In acknowledging the receipt of your letter of the I am directed to acquaint you that upon your signing the petition, &c. &c., and answering the under-mentioned questions in a full and satisfactory manner, a further reply will be given to your application.

Secretary and Adjutant.

The father's Christian and surnames.
Mother's Christian name.
Number of children in the family now living.
Date of the father's enlistment.
Regiment to which the father belongs, or did belong.
Period of service.
Whether now serving in the army.
If the father has ceased to serve, the date of his discharge and rate of pension.
In what manner he is employed.
If the father is dead, state the date of his death, and where he died; forward the burial certificate.
If the mother is living, in what manner is she employed.
If the mother is dead, when and where did she die; forward the burial certificate.
When and where the parties were married.
A certificate of the birth and baptism of every child in the family to be forwarded, to enable the governors to decide upon the claim.
As also are the marriage lines, original certificate to be forwarded.
"Parchment Discharge" and "Pensioner's Instructions" to be forwarded, or state to whom they were given, and when.
State the actions the father served in.
Religion of the father.
Religion of the mother.

It being particularly desirable to ascertain correctly the religion of the parents of all children admitted into this institution, it is requested that the same may be certified by a clergyman of the parish or by the nearest magistrate.

Petitioner's Address.

Signature of Parent or Guardian.

D.

Royal Hibernian Military School,
Phœnix Park, 18

Your application for the child, has been entered on the list, with others, to be brought under the consideration of the governors for admission to this asylum as vacancies occur and the claims merit.

Immediately the child is admitted, a printed notice will be sent to you; but from the number of candidates already on the list, who have prior claims, the period is very uncertain. It is, however, quite unnecessary to make any further application; and it will only be a waste of time and money to bring or send the child here, as, before the notice of admission has been sent, the child cannot be admitted.

You are also to take notice that if the governors should order this boy to be admitted, it will only be provisionally. He cannot be received here if he have any disability disqualifying for military service, such as any defect of vision (far or near), disease of the eyes, ears, or other part, any affection of the hairy scalp or skin, any sign of scrofula, or delicacy of constitution, so that, if any such exist, this is to be considered a warning to attend to it in sufficient time, since, if he be rejected, the whole expense of his being sent back will fall on the parent or guardian.

Further, if it be discovered within a reasonable time after admission that the boy has the habit of wetting his bed, he will, as above, be sent back at the expense of his parent or guardian; so that timely attention should be given to this disability, caused in almost all cases by early neglect, and to be cured most easily whilst the child is young.

By order,

Secretary.

Institution Orders.

9th June 1860.

With a view to the promotion and encouragement of good conduct, which the Commandant is most desirous of seeing raised, D.V., to the highest standard in this school, he directs that good-conduct pay and distinguishing marks shall be granted to boys under the following rules:—

1st. Boys who shall have been two years in the institution shall be entitled to claim one penny good-conduct pay and to wear one distinguishing mark, provided their names shall not have appeared in the Permanent Defaulters' Book for at least two months immediately preceding such claim.

2nd. Boys who shall have been three years in the institution shall be entitled to claim twopence good-conduct pay and to wear two distinguishing marks, provided their names shall not have appeared in the Permanent Defaulters' Book for at least four months immediately preceding such claim.

3rd. Boys who shall have been four years in the institution shall be entitled to claim threepence good-conduct pay and to wear three distinguishing marks, provided their names shall not have appeared in the Permanent Defaulters' Book for at least six months immediately preceding such claim.

4th. Boys who shall have been five years in the institution shall be entitled to claim fourpence good-conduct pay and to wear four distinguishing marks, provided their names shall not have appeared in the Permanent Defaulters' Book for at least eight months immediately preceding such claim.

5th. Boys who shall have been six years in the institution shall be entitled to claim fivepence good-conduct pay and to wear five distinguishing marks, provided their names shall not have appeared in the Permanent Defaulters' Book for at least ten months immediately preceding such claim.

6th. Boys who shall have been seven years in the institution shall be entitled to claim sixpence good-conduct pay and to wear six distinguishing marks, provided their names shall not have appeared in the Permanent Defaulters' Book for at least twelve months immediately preceding such claim.

The following are the dates on which the good-conduct pay shall be issued:—

New Year's Day.
The anniversary of the birth of the reigning Sovereign.
2nd September, being the anniversary of the presentation of colours to the boys of the school by his Royal Highness the Prince of Wales.
The anniversary of the birth of the Prince of Wales.

Boys in receipt of good-conduct pay and wearing distinguishing marks, who shall commit an offence deserving of punishment to be recorded in the Defaulters' Book shall, according to the nature and degree of such offence, be deprived of one, or more, or all distinguishing marks, with the good-conduct pay attached, and shall only be entitled to obtain a restoration of this honourable distinction and pay by subsequent and uninterrupted good conduct under the following conditions:—

Two months uninterrupted good conduct to obtain 1 distinguishing mark and 1*d.* good-conduct pay.

Four months,	2	distinguishing marks	and 2*d.*	good-conduct pay.
Six	„ 3	„	and 3*d.*	„
Eight	„ 4	„	and 4*d.*	„
Ten	„ 5	„	and 5*d.*	„
Twelve	„ 6	„	and 6*d.*	„

In publishing the above rules Colonel Mylius takes the opportunity of impressing upon the boys the great advantage to be gained by good conduct, which it is in the power of every one (the very youngest boy in the school) to obtain for himself by a ready and implicit obedience to the orders of his superiors. He promises to the boys every indulgence consistent with his duty, and he is greatly encouraged by the assistance and influence of the officers, schoolmasters, and non-commissioned officers, in the hope of seeing cheerfulness and happiness reign throughout this institution.

(Signed) G. F. Mylius, Colonel,
Commandant R. H. M. S.

(Copy.)
H. Wynyard,
Lieutenant-Colonel Commandant.

ROYAL HIBERNIAN MILITARY SCHOOL.

CRIMEAN BANQUET FUND PRIZES FOR DISTRIBUTION ON TUESDAY, 6th JULY 1869.

		£	s.	d.
1st Class.	First Prize	8	0	0
	Second Prize	6	0	0
2nd Class.	First Prize	5	0	0
	Second Prize	4	0	0
3rd Class.	First Prize	3	0	0
	Second Prize	2	10	0
	Third Prize	1	10	0

THE ORIGIN OF THE CRIMEAN BANQUET FUND EXHIBITIONS.

In 1856 the people of Ireland, having determined to give some mark of their respect and admiration for the endurance and valour displayed by the British forces in the campaign against the Russians before Sebastopol until the successful assault and fall of the southern part of that city, resolved to entertain the triumphant army in Ireland at a public banquet, and having subscribed 3,588*l.* 15*s.* 2*d.* for that purpose, the said banquet took place on the 22nd October, 1856, at the Custom House, Dublin, at which upwards of 4,000 non-commissioned officers and soldiers were entertained sumptuously. After payment of all expenses a net residue of 1,000*l.* remained, and the subscribers to the fund, anxious to dispose of that residue in such a manner as to perpetuate and keep in remembrance for ever hereafter the objects aforesaid, caused the said sum of 1,000*l.* to be invested in the purchase, in the names of certain trustees, of the sum of 1,097*l.* 9*s.* 10*d.* Government Three per Cent. Stock, to which a sum of 2*l.* 10*s.* 2*d.* like stock was subsequently added, making a total of 1,100*l.* stock, the dividends of which were directed to be applied for the benefit or advancement yearly of one or more of the boys of the Royal Hibernian Military School, in such time and manner as certain specified trustees, or the majority of them, at their discretion might determine. Thereupon the Crimean Banquet Fund Prizes were established under the following

RULES AND REGULATIONS.

I.—The interest of the sum vested will be divided in seven Prizes; one of 8*l.*, one of 6*l.*, one of 5*l.*, one of 4*l.*, one of 3*l.*, one of 2*l.* 10*s.*, and one of 1*l.* 10*s.*

II.—The competition for such premiums to be open to every boy in the school whose age may not exceed fifteen years. Any exception to this rule to receive the sanction of the Committee.

III.—The money is not to be given to the boys at the time of competition, but the amount of premiums to be entered on parchment certificates, naming the successful competitor, and detailing also the course of examination, and number and order of marks awarded.

IV.—If the successful competitor enters the army, the money will be invested in the regimental savings bank, but the interest thereon may be paid to the certificated competitor. The principal to be paid to him at such time as the officer commanding his regiment may consider to the soldier's advantage.

V.—If the successful competitor does not enter the army, the Committee of Governors may appropriate the money as may appear to them most beneficial to the interests of the successful competitor.

VI.—If any successful competitor die previously to the payment of the sum awarded, that sum may be paid by the Committee of Governors to the parent or next of kin; in the event of there being no relation or next of kin, and no bequest made, then such sum awarded shall revert and be added to the original sum vested.

VII.—No boy being a successful competitor one year for the highest prize will be further eligible to compete; and any successful competitor will only be allowed to compete again for a higher prize than that which he has already obtained.

VIII.—The examinations, to be *viva voce* and by written questions, will be held every June, and will be as public as possible, and comprise every branch of science, art, handicraft, or matter of discipline taught or inculcated in the establishment.

IX.—The examiners shall be other than the masters of the school, and be appointed by the committee.

X.—The attainment of the highest number of marks out of the whole 2,000 hereafter stated shall be considered the test of excellence, and regulate or govern the awards.

ROYAL HIBERNIAN MILITARY SCHOOL.

2 „	3½ „	School	1½	Trades in two batches work every alternate week-day, except Saturdays, from 2 to half-past 5 p.m.

Time. From.	Time. To.	How Employed.	Hours.	Remarks.
5½ p.m.	to 6½ p.m.	Recreation from 5½ to 4; band and drums to practice from 4 to 5½ p.m.; company drill from 4 to 4½; punishment drill from 4 to 5; recreation for all from half-past 5 to quarter to 6; battalion drill from quarter to 6 to quarter-past 6.	3	Half-holiday on Saturday, when boys entitled to indulgence are permitted to go on pass.
6½ „	to 8½ „	Supper and recreation - - - - - - -	2	Thus, excepting boys ordered extra tasks for idleness, &c., in school, no boy has on any day more schooling than for 4¾ hours; and, if a trades boy, more of school than 3¼ hours in the forenoon, and of his trade 3½ hours in the afternoon on three days in the week.
8½ „	to 9 „	Tattoo; prayers and march up to dormitories - - -	¼	
9 „	to 5½ a.m.	Bed - - - - - - - - - - -	8½	
		WINTER (from 31st October to last day of April).		
		Time nearly the same as in summer, except that the boys do not rise until 6 a.m. and go to bed half an hour sooner.		No boy has on any day more drill than 1½ hours, except he be for "punishment drill," which gives him half an hour more. H. W.

N.B.—Holidays are granted for about 18 days in summer.
„ „ 14 „ winter.
„ „ 5 „ Easter.

Boys having friends (able to maintain them) in Ireland, are permitted to visit them during the holidays; but boys are not, as a rule, allowed to go to England or Scotland for the holidays, except at midsummer.

Drinking fountains are in the "play room" and on the "play ground."

Singing instruction is given every Tuesday and Saturday in the forenoon from half-past 11 to 1.

Hair cutting takes place three times a week after 3.30 p.m.

Medical inspection of heads every Thursday morning before school.

"Washing all over" every Wednesday afternoon after 3.30 p.m.

The "swing" or "fly poles" and the gymnastic bars are accessible to all boys during recreation hours.

In fine weather the boys are taken out into the park during recreation hours, and they play cricket, football, &c., &c., within certain bounds and close to the premises.

Royal Hibernian Military School, 14th March 1870.

H. WYNYARD, Lieut.-Col. Commandant.

M.

TEACHING STAFF of Royal Hibernian Military School.

14th March 1870.

The teaching staff consists of 4 masters, and 12 monitors or pupil-teachers.

The masters are appointed by the Governors.

The masters at present are:—

		Religion.
1st master	Mr. Jno. H. Gibbons,	Church of England.
2nd „	Mr. Wm. T. Young,	„
3rd „	Mr. Pierce C. Hoskins,	„
4th „	Mr. T. Stritch,	Roman Catholic.

The monitors are appointed when about 15 or 16 years of age by the Commandant, upon the recommendation of the head master, from such boys of the 1st class, as at the age of 14 elected to remain in the school to be trained for the office of monitor instead of enlisting for the Army; they must be well conducted boys and physically fit.

The present monitors or pupil-teachers are:—

1.	William Harding,	aged 19 10/12 years,	Church of England.
2.	Robert Jno. Dunne,	„ 19 8/12 „	Roman Catholic.
3.	Wm. A. Hickie,	„ 19 7/12 „	Church of England.
4.	David Allan,	„ 18 11/12 „	Presbyterian.
5.	William Ashe.	„ 18 9/12 „	Church of England.
6.	Robert M'Kay,	„ 18 1/12 „	Presbyterian.
7.	James Moore,	„ 17 9/12 „	Roman Catholic.
8.	James Hegarty,	„ 17 „	„
9.	George J. Hodgson,	„ 16 11/12 „	Church of England.
10.	Joseph Smith,	„ 16 6/12 „	Roman Catholic.
11.	Charles Rennyson,	„ 16 1/12 „	Church of England.
12.	Richard Allan,	„ 15 10/12 „	Presbyterian.

The pupil-teachers must quit the school at the age of 20 years, and, if they prove qualified, may become students at the normal school at Chelsea with a view to being appointed army schoolmasters.

H. WYNYARD, Lieut.-Col. Commandant.

(ii.)—ANSWERS received from GENERAL LORD STRATHNAIRN, G.C.B., &c. &c., Commander of the Forces in Ireland.

II. I consider that the conditions of admission to this military school are very good, their main feature being the good service of the fathers, soldiers in the army, without any consideration whatever as to religion.

As regards the "mode of admission," I think that it might be improved.

Applications for admission are addressed to the Commandant of the school, who enters them in a general list, from which he selects another, a smaller list, which is submitted to the sub-committee of governors, for admission to vacancies as they occur.

The sub-committee, which is a quorum of field officers not under the rank of lieutenant-colonel, may call for, and have full right to examine and control, the general list; but a case respecting admission is now before the governors which shows that the Commandant enters the candidates' names in the general list, which is in his keeping, although it may be called for by the governors, and that he selects from it candidates for a smaller list, from which selections are to be made by the sub-committee for admission to fill up vacancies as they occur.

It is perfectly true that the principle on which he makes this selection—the military merits of the fathers—from the general list for the smaller one, appears to be faithfully adhered to.

I should explain, to make clear that the principle of selection, whether as regards selection from the general for the smaller list, or from the smaller list to fill up vacancies, is as follows:—

The candidate on the general list may be No. 1, and therefore have the right of priority of application; on the other hand his father's service may have been of only two years, and without any record of merit of any sort; but the soldier, the father of the candidate who stands so low down as No. 25 on the list, may have served 21 years, have received good conduct stripes, medals, &c.

It is superfluous to observe that No. 25 applicant has, in the spirit of the principle of admission a greater although not a prior claim to admission than No. 1 candidate.

Notwithstanding these excellent rules, and that the present Commandant of the school is quite incapable of indulging in preferences, I think that the selection from the general for the smaller list should rest, as selections now do from the small list for nominations to vacancies to the school, *with the sub-committee*.

The Commandant of the school has by the right of his office charge of the discipline, interior economy, &c. of the school, and is answerable that the regulations for the education of the boys are carried out; but matters relating to the selection of candidates, whether for selection from the lists, or for nomination to vacancies, are not of his competency.

The Hibernian School unfortunately is not more free than other Irish institutions from sectarian jealousy and influences; and it would therefore be better were the drawing up of the general list vested, like the selection from the smaller list for nomination to vacancies, in the sub-committee of governors.

III. I consider it should be more of a military character.

The school is a very valuable preparation for the army, and everything should be done that tends to turn the boys' inclinations towards the army, and to qualify them for it.

IV. I consider the present Governing Body is far too cumbrous and large. I think that the Governing Body, under the present President and Vice-President, should consist of a head of one of the departments of the permanent Army Staff, who would be assisted by a quorum of four commanding officers; with the head of this permanent staff to go out yearly and be relieved by others of the same rank.

V. I consider that this question should be submitted to a medical board, with instructions to vary the diet according to the constitution or health of the child.

Appendix IV. (A.)

Hibernian School.

VI. The authorities of this school produce testimonials, documents, and statistics from commanding officers of regiments, as to the promotion of boys who enter the army as soldiers, and letters from the boys themselves, which are very favourable to the school.

Strathnairn, General,
Commander of the Forces in Ireland.

(iii.)—Answers received from Lieutenant-Colonel T. B. Speedy, Secretary and Adjutant.

II. I most fully agree with Lieutenant-Colonel Wynyard in his answer to this question.

III. I do not think the method of instruction capable of improvement.

IV. I concur in all Lieutenant-Colonel Wynyard has said under this head.

V. I have nothing to add to what Lieutenant-Colonel Wynyard has so fully gone into under this head.

VI. The subsequent careers of the pupils I have closely watched for the last 16 years, and I take great interest in making out the annual abstract from the regimental returns received here every year from all parts of Her Majesty's dominions.

The results appear to my mind to be more satisfactory each successive year; thus on 1st January 1855 only 457 were accounted for, whereas now there are serving throughout the army 983.

A military spirit and desire for the army as a profession is carefully inculcated, and it is a fact that many boys who have been withdrawn by their friends from the School to be apprenticed to trades have afterwards joined the service and turned out well.

(I may instance two brothers named Windrum, both of them colour-serjeants in the 27th regiment before they were 23 years of age.)

215 of our boys distinguished themselves in the Crimea, and we know others have been engaged in action in various other affairs (for instance, throughout the Indian mutiny, Abyssinia, &c.).

As to the advantage of the Institution to the service, it will be fully evidenced by the annexed return showing the several branches in which they are now serving, viz.:

Cavalry	169
Artillery	167
Engineers	93
Infantry	554
Total	983

The majority are kept in bands and drums, and consequently have no opportunity of advancing themselves.

I may perhaps be permitted to instance the cavalry, in which branch of the army, out of 169 serving, 116 are in regimental bands, 6 in training as trumpeters, 20 as privates, and only 27 as non-commissioned officers, although the characters are satisfactory, there being only 11 as indifferent or bad.

Boys from the Royal Hibernian Military School have always been much sought after by commanding officers.

It would appear to me desirable that some steps should be taken to throw more open in regiments the prospect of advancement to the young lads who join. I have no doubt that if commanding officers could be induced to permit some to be removed from bands or drums, there would be more promotions from the ranks.

VII. I have merely to suggest that, if commanding officers would permit eligible men desirous of leaving bands to join the ranks for chance of promotion, many more of our old pupils would (in all probability) be advanced as non-commissioned officers.

A good clarionet player, for instance, who is now obliged to remain in the band against his will, might be allowed to join the ranks under agreement that he would keep up his musical attainments, and practise with the band in spare time; give assistance to the band when required, &c.

I think that in the end more good musicians would be available throughout the service, and also a better educated class of non-commissioned officers.

I have no doubt that those who might be removed from bands would, under suitable encouragement, still continue to cultivate music,—a source of social enjoyment in leisure moments,—and that they would always be glad and prepared to assist in teaching the younger hands, and in supporting the musical reputation of the regiment on gala days, besides creating vacancies for younger lads to acquire proficiency in so agreeable an art.

It would be advantageous to such non-commissioned officers themselves; men fond of music would gladly keep it up; and when quartered in towns they would profit in a pecuniary sense if permitted to play at concerts, &c.

In the Royal Artillery when lads attain the age of 18 years, they can leave the trumpet and go to their duty as gunners or drivers; the consequence is that a young fellow with education runs a fair chance of early promotion.

T. B. Speedy, Lieut.-Colonel,
Secretary and Adjutant,
R. H. M. S.

J. Speedy, Lieut.-Col.,
Secretary and Adjutant,
R. H. M. School.

* Instructor in Field Works at Chatham.

(iv.)—ANSWERS received from J. H. GIBBONS, ESQ., Head Master.

II. Admission to the school is regulated solely by the governors, no official of the institution having (so far as I am aware) any voice or influence in the matter.

I have no personal knowledge of the bases upon which the governors act in selecting boys to fill vacancies; but I believe the main considerations with them are, the nature and length of the father's service, his character, and the necessities of each case.

The *conditions* are simple in character and few in number, and, as far as I can judge, do not require any alteration.

III. The course and method of instruction are almost identical with those pursued in the Model Schools, Marlborough Street, Dublin, and appear to be well adapted to the circumstances of the boys, and the character of the institution, special regard being given to the mode of life the majority of the pupils will probably adopt.

The instruction, both in and out of school, is made as practical as possible, and is such as is calculated to develop both the mental and physical capabilities of the boys.

The system has now been in operation for many years, having been introduced by myself, with the sanction of the governors, in 1845, and has always gained the approval of the gentlemen who have periodically examined the school. Among these may be mentioned the names of the Chaplain-General, Rev. Mr. Gleig, the Rev. Joseph Galbraith, Rev. Samuel Haughton, and J. K. Ingram, Esq., Professors and Fellows of Trinity College, Dublin, and the Messrs. Fitzgerald and Molloy, inspectors under the Board of National Education; all of whom are gentlemen, who, from their position and experience, are well qualified to form a judgment.

In a letter addressed to me in 1847, when the system had been but two years in operation, the then commandant, Colonel (now Lieut.-General) Colomb, says: "It gives me "much pleasure to say, that after a close examination of "the Royal Hibernian Military School by the Chaplain-"General, the Rev. G. R. Gleig, he has desired me to state "to you that he not only approves of the system of educa-"tion introduced here, but was delighted with the healthy "and happy appearance of the boys, and their ready and "intellectual way of answering when examined; and, "further, that he was every way satisfied and much "pleased with the zeal and intelligence of the masters; "and he has written to the Secretary-at-War to recom-"mend additional accommodation and further assistance "in teaching, as an encouragement and reward for the "exertions made." This favourable opinion the Chaplain-General continued to hold during the entire period of his connexion with the school—nearly ten years.

In February 1859, Messrs. Galbraith, Haughton, and Ingram state in their joint report: "We have also been "impressed with the conviction that the system of "teaching pursued in the school is highly judicious, and "has been carried out with intelligence and energy"; and Messrs. Fitzgerald and Molloy, in their first report, dated 8th December, 1866, say, "We had ample evidence "that the instruction imparted in the Royal Hibernian "Military School is of a thoroughly practical nature, and, "in our opinion, well adapted to the course of life which "the boys are likely to adopt." Subsequent reports from the same gentlemen have all been equally favourable.

The principal defect is the size of the classes, which average 25 pupils to each teacher or monitor, a number much too great for effective teaching, and particularly for the practice of reading; but this can only be corrected by an increase in the staff of monitors.

IV. The organization, for educational purposes, is into four divisions, each occupying a separate school-room and having its own master and monitors.

The *first* or highest division is under the immediate control of the head master, who also exercises a general supervision over the whole school; and the three junior divisions are examined by him every four months for the purpose of making transfers, and the results of his examinations reported to the commandant.

I am not aware of any system better suited to the wants and character of the institution.

Of the arrangements for what may be termed *military* purposes, such as drill, &c., I am unable to speak, as such do not come within the scope of my duties; but those for sleeping, messing, and ablution, are all admirable, and the discipline is good.

With the powers of the Governing Body I am not well acquainted, and do not, therefore, feel competent to express an opinion; but the position of the teachers—at least of the *civilian* masters—is not, I think, quite satisfactory. In no respect is it as good as I believe it would be in an institution of similar importance in England or Scotland; while, in the matter of *quarters*, the accommodation afforded them (with the exception of the head master) is inferior and very limited.

Considering the education these gentlemen have received, the training they have undergone, and the importance and responsibility of the duties devolving upon them, I do not know of any valid reason for the comparative inferiority of their position, and am of opinion that some amendment is requisite in this respect.

V. All, I think, perfectly satisfactory, except, perhaps, the arrangements for disposing of the sewage, which I believe are objected to by the surgeon. No improvements are necessary in other respects.

VI. Returns are received annually from every regiment in the service, showing the rank, character, &c. of those soldiers who were formerly boys in the school.

These returns are recorded in a book kept for the purpose, so that no boy is lost sight of upon leaving the institution as a volunteer; but, on the contrary, his subsequent career is carefully noted; and the returns become a valuable criterion by which to judge of the results of the training and education imparted in the school.

From the last returns it appears that of those at present serving, *nine* are officers, *twenty-one* are army schoolmasters (*all* of whom have passed creditably through the Normal School, Chelsea, and several have taken the highest places at the final examinations), *ten* others, I believe, are band-masters; while, with respect to conduct, upwards of 93 per cent. are returned as "good," "very good," or "exemplary," and only two per cent. as "bad."

Again, between 22 and 23 per cent. have attained the rank of non-commissioned officer; and this per-centage would be greatly increased, and the advantages of the institution still more apparent, were it not that more than half of those serving are either in the band or drums, and their prospects of promotion thereby lessened.

I do not think anything could better illustrate the value of the school, and the results of the education which the boys receive, than these returns.

VII. It might, perhaps, be worthy of consideration whether it would not be for the interests of the institution to have a certain number of the governors appointed *for life*.

I believe that, under the present constitution of the board, some of the officers composing it hold their position, as governors, only for a few years, while many do so for a much shorter period, their connexion with the school ceasing on the withdrawal of their regiments from the Dublin garrison.

They are thus precluded from becoming as well acquainted with the working and management of the institution as they otherwise would, and may, in consequence, take a slighter interest in its welfare.

This objection could not apply to *life governors*, and, possibly, the school might be benefited by their appointment.

JOHN H. GIBBONS,
Head Master.

Royal Hibernian Military School,
10th March 1870.

ENCLOSURES ACCOMPANYING MR. GIBBONS' ANSWERS.

ENCLOSURE No. 1.

We, the undersigned, having been requested to undertake a portion of the examination of the pupils of the Royal Hibernian Military School who were candidates for the Crimean Banquet Fund Exhibitions, beg to report that we examined during three successive days in Arithmetic, Algebra, Geometry, Mensuration, Natural Philosophy, Physical, Political, and Commercial Geography, English History, and English Grammar.

The answering of the whole school in Arithmetic was highly creditable; and the boys who presented themselves for examination in Mensuration, Euclid, and Elementary Algebra, were well grounded in these subjects. In Natural Philosophy the answering of the elder boys was very good; and the inferiority of the junior boys is, in the opinion of the examiner, Mr. Galbraith, to be attributed rather to the difficulty of teaching such subjects to very young boys, than to any want of attention on the part of the boys themselves, or of skill on the part of their teacher.

In Physical Geography, which appears in the school to be made the basis of Political and Commercial Geography, the answering was uncommonly good, and reflects the highest credit on the method adopted in teaching this subject, and on the zeal with which it has been carried out.

In those branches of education which are rather of a literary than a scientific character, the answering was equally satisfactory. In particular it may be mentioned that the great majority of the candidates showed that they possessed a correct and clear knowledge of the leading events of English History, and some of them exhibited a proficiency in this department which would do honour to the pupils of any school in the country.

On the whole we have been led to form a very favourable opinion of the general industry and attention of the boys. We have also

Appendix IV. (A.)

Hibernian School.

been impressed with the conviction that the system of teaching pursued in the school is highly judicious, and has been carried out with intelligence and energy; and we think that the thanks of the public are due to Major-General Colomb and his subordinate officers for the enlightened zeal which they have shown in the management of this important institution.

(Signed) Joseph Galbraith, Fellow of Trin. Col., Dublin, and Professor of Exp. Philosophy in the University of Dublin.
Samuel H. Haughton, F.R.S., Fellow of Trin. Col., Dublin, and Professor of Geology in the University of Dublin.
John K. Ingram, Fellow of Trin. Col., Dublin, and Professor of English Literature in the University of Dublin.

3rd February 1859.

Enclosure No. 2.

Office of National Education,
Marlborough Street,
8th December 1866.

Sir,

In enclosing you the tabulated summary of the answering of the boys of the Royal Hibernian Military School examined by us on the 3rd, 4th, and 5th inst., we feel much pleasure in assuring you that the results of the examination—written and oral—have proved *altogether satisfactory.*

The boys evinced a degree of knowledge in the prescribed subjects, not merely beyond what might be expected from pupils of their age, but also considerably in advance of that usually attained by lads of higher social position whose more favourable opportunities would warrant the expectation of much superior results.

Whilst a degree of proficiency considerably beyond the average, and which reflects the highest credit on the Head Master, Mr. Gibbons, has been realized in the several subjects of the school course, we were particularly gratified to observe that *marked excellence* had been attained in those most important branches of primary education, Reading and Arithmetic. Indeed we had ample evidence that the instruction imparted in the Royal Hibernian Military School is of a thoroughly practical nature, and, in our opinion, well adapted to the course of life which the boys are likely to adopt.

Their demeanour throughout the examination was admirable, the utmost alacrity and cheerfulness in carrying out our instructions being displayed by all; and their general bearing towards each other convinced us of the discipline maintained in the institution under your direction, and that the efforts to implant habits of self-reliance and manly independence had been attended with complete success.

We beg in conclusion to tender you our best thanks for your courtesy and extreme kindness to us during the examination.

We have, &c.
(Signed) William R. Molloy.
M. Fitzgerald.

(v.)—Answers received from Lieutenant-General George Colomb, formerly Commandant of the School.

I. I think the present mode and conditions of admission good and proper, but I incline to the opinion that admission at 8 would be better than 7.

II. I believe the present course of education is very good, as it is useful and elementary, and given by able teachers, under the direction of Mr. Gibbons, a most valuable and highly qualified head master; but the classes are far too large.

There is, however, a great want of instruction for the modern soldier, in practical elementary engineering, such as the use of the saw, the spade, the trowel, hammer and chisel, &c. Rudimentary and practical field and house fortification, brick and stone laying, model making, simple mapping and surveying, &c.

I tried this with marked success for more than a year, about 1856–57, and found these studies became instructively amusing, having also great effect on the character of the boys, making them more content to remain at the school. Such tuition, moreover, gave valuable aid to discipline, for a temporary prohibition was found to be a most effective punishment.

III. It is eleven years since my promotion removed me from the Hibernian School, but I believe the powers of the governing body still vary occasionally, as do the governors themselves.

A governor visits weekly, reporting his remarks in a book, arranged for the purpose, to a monthly board of seven, constantly varying.

A fixed number or set of official inspectors would, I think, be better. In most cases assistance and support is given to the commandant.

IV. This appears to me a question for the medical officers in charge, but I may remark that the repeated suggestions made by me for improvements, and more dormitory accommodation, and for a proper and better supply of good water, have since been carried out.

Of these, however, I cannot speak personally as unfortunately, though much wishing it, my name has never been added to the list of governors, though I still take very great interest in this and other such establishments.

V. By returns to the War Office, and from my own knowledge, the results of the training of "soldiers' sons" are most beneficial; some have been more than creditable, and the career of the pupils generally, most satisfactory, and of great advantage to the service.

VI. I think both military schools should be *largely increased;* the demand for boys from the Royal Hibernian Military School, by officers commanding regiments was, and I believe is, overwhelming and distressing.

I would suggest that no band boy should leave the school till 15 at soonest, as practised at Chelsea. I obtained an order for this about 18 years ago, but this restriction has since fallen through. The band was then flourishing and much sought after, and several boys distinguished themselves at Kneller Hall; at the same time it should be observed that band and drum boys are rarely promoted to non-commissioned officers.

Great consideration should be given towards the training of eligible boys to become future non-commissioned officers.

That an eligible master gunner or serjeant of Royal Engineers should be added to the school to carry out the proposition made in No. II. answer.

I have a strong idea, perhaps fanciful, that 50 or more eligible boys should be armed with a small rifle or smooth-bore carbine, and be occasionally trained as marksmen, thus inducing them to remain till 16 or 17, giving them then man's pay on enlistment, and a small badge of good conduct, to be retained and worn while behaving well, regimentally.

Geo. Colomb, Lt.-Gen.,
Colonel, 97th Regiment,
formerly Commandant R. H. M. School.

Dalkey, Dublin,
7th March 1870.

(vi.)—Answers received from the Rev. G. R. Gleig, M.A., Chaplain General to the Forces.

II. The conditions and mode of admission to this school are essentially the same as the conditions and mode of admission to the Model School at Chelsea; both are good.

III. I do not consider the course of education so good in the Hibernian School as at Chelsea; the influence of the Romish clergy hampers the freedom of choice in subjects to be taught. It is not easy, for example, to give here a collective lesson in morals founded on religion. If I could change this I would do so, but can we? The boys are well taught in arithmetic, reading, geography, and such like. They are taught too much apart their duty to God and man. It strikes me that the absolute severance of one section of them from another, whenever certain subjects are approached, has a tendency to perpetuate ideas in the army which should, as much as possible be got rid of—religious antipathies.

IV. There is far more of priestly interference with the discipline of the school at the Phœnix Park than at Chelsea. This partially weakens discipline, not among the boys, for they seem biddable and well disposed, but among the masters. In these respects the organization of the establishment is imperfect. But who will undertake to cure the imperfection?

V. The accommodation for the pupils is ample and excellent. The sanitary condition of the school far before that of Chelsea, thanks to the superior healthiness of the locale.

VI. I have not the same opportunity of judging as at Chelsea in regard to the after career of the boys, and the results of their education upon them and upon the service. But as far as my means go I believe that the service is much benefited, and that the great majority of the boys do well.

VII. I can offer no suggestions which are likely to be acted upon. We must make the best that we can of a state of things of which neither Protestants nor Roman Catholics, I imagine, entirely approve.

G. R. Gleig.

(vii.)—Answer received from Deputy Inspector-General of Hospitals R. Templeton, M.D., Surgeon to the School.

IV. Within the last few years most important changes have been made, all tending to the improvement of the sanitary condition of the school. The dormitory space, an essential element in securing health, has been increased so

that 45 square feet of space is allotted to each boy. Ventilation, still capable however of improvement, and for which provision has been made in the estimates for this year, has been extensively carried out; the rooms have been purified by cutting off every trace of effluvium from the urinals and waterclosets; the lavatories and plunge bath have been reconstructed on most improved principles, and additional school-rooms have been opened. The recreation room, the sole resort of the boys in winter evenings, and throughout the year on wet days, has been enlarged and ventilated. Stoves which, notwithstanding their great size, performed their office very inefficiently in the recreation and school-rooms, have been replaced by open fire-places, which from their form, combining economy of fuel with a greatly enlarged frontage, shed forth an abundance of radiant heat; thus warmth is much more generally diffused than was formerly the case, and the comfort of the boys is greatly increased. In the new building dormitories, from which fires are excluded, warmth is afforded by hot air batteries; these are seldom required, but when they are, they seem to work well, and require no attention during night.

On the whole the accommodation for the boys is very satisfactory, but in various ways improvements can be effected. Dr. Hill, one of the Poor Law Inspectors, who was directed by the Irish Government to visit and report upon the sanitary condition of the school a few months ago, expressed himself perfectly satisfied with its sanitary state, after a particularly minute examination.

It is a disadvantage to the school boys that the recreation room is the sole place for them in the wet weather of summer; its dimensions, though large, give only 13·6 square feet and 176 cubic to each boy. It is excluded by the general construction of the building from the genial warmth of the sun, and in summer is the only place, save a very small shed on the playground, to which they can retire on wet days. It has at these times a tendency to become heated and unpleasant, if the boys be in it a long time continuously. Two remedies have been suggested; one not at present practicable, but which will ultimately be carried out, embraces the opening out of the central cross length to the south front of the building; this will be a very great improvement, as the sunbeams will then have access to the room for some hours of mid-day. The other remedy has been in contemplation for many years; it is desired, and estimates for it have been included in the annual returns year after year, to construct on the playground in front a well sized shed, that is, with some 4,500 square feet of roof area, closed in on two contiguous sides to prevent the fierce winds which traverse the plateau from sweeping through it. Into it the boys could run from heavy showers or continued rain, thus still having the advantage of fresh air, and permitting the recreation room a longer interval for the recovery of its purity.

It may be granted then that, within our immediate building, considerable progress has been made in the endeavour to place it in a fair state of sanitary conservation. We have had, however, much to complain of in past years outside our precincts in regard to the disposal of the sewage; but as it now is, we trust, in fair way towards amelioration, it will be unnecessary to notice it further here.

I have referred in my sanitary reports to the sufferings of the boys from the damp cold of the severer winter months. Nearly all the complaints, colds, sore throats, chilblains, scrofulous derangements, and chest affections, are mainly traceable to this cause; and in my reports I have urged the desirability, if not necessity, for surrounding the grounds of the institution with a thick belt of evergreens, austrians, spruces, and other non-deciduous trees, through the foliage of which the wind would reach us, as if strained, curbed of its violence and harshness; thus, in a few years to convert these exposed grounds into a sheltered nook, well guarded on all sides but the sunny south. It is little imagined how near an ally comfort is to health. A memorandum forwarded by me for the favourable consideration of the Commissioners of Public Works, was submitted to the Treasury, but I regret to say the matter was not considered of such pressing importance as to permit of the small outlay being sanctioned. I know of no sanitary point about this school, biting as are the winds which sweep across the plateau on which the school rests, their convective power augmented by the large charges of moisture they obtain in their passage over the wet clayey soil of the vicinity, which demands more considerate attention; and I shall consider it my duty to press it upon those who are interested in the welfare of the school, as opportunities offer, from year to year. From General McMurdo (Chairmain of the Committee of Governors), who fully mastered the subject, and was convinced of its propriety, I received every encouragement to persevere.

Appendix IV. (A.) Hibernian School.

On sanitary grounds I also feel compelled to observe upon a practice I have more than once brought to the Commandant's notice. The Roman Catholic boys of all ages are, immediately after morning ablution, marched off to the chapel at 7 a.m. in summer and 7.30 a.m. in winter on the alternate Sundays of the month and on holydays. This is more or less trying during the ruder months of the year, and is, I think, unsuited to the tender frames of the very youngest boys. I have not observed the practice to obtain in other Catholic countries, and I doubt if it be generally pursued in Ireland itself. My objection has no reference to the elder boys who have received confirmation; though a question suggests itself, into which I will not enter, as to how far it be desirable to permit such partial interruptions of the general observance of time and occupation, &c. in a mixed but thoroughly harmonious community like ours. During the severer months of the winter, with this exception, no boy is exposed in the open air till fortified by his warm milk breakfast, which is given him at an early hour. I can testify to its advantages; the warm breakfast and warm fires of the recreation room and hall enable them to repel vigorously the chills of the early morning, and they enter their schoolrooms in much better preparation for their tasks.

The last point which it occurs to me to notice is directed to our contracts for provisions. Those we have entered into for some time past have been most satisfactory, providing to the boys well flavoured, nourishing food, the meat of very high quality, the milk good, and our bread excellent. In entering into these contracts, notwithstanding that the rates are somewhat higher than elsewhere, we have been guided by our knowledge of the thorough necessity for taking climate, and the clothing dependant on it, into consideration. We have here, damp piercing winds, rain falling on more than half the year, and such summer as we boast of brief; we are surrounded by, and have under our feet, a cold clayey soil, most retentive of moisture, and the valley below us contributes its fair share; it is not, therefore, to be wondered at, that we view with well grounded suspicion low contracts for inferior and infinitely less nutritive articles of food; and that we require a superior description of clothing to preserve warmth and repel the injurious influences alluded to above.

ROBT. TEMPLETON,
Surgeon.

B.—MEMORANDUM BY THE SURGEON TO THE SCHOOL.

Appendix IV. (B.) Hibernian School.

FORWARDED TO THE COMMISSION AFTER THEIR VISIT TO THE SCHOOL.

The very severe outbreak of Porrigo (the worst form of sore head) which occurred some years ago, when sanitary matters less engaged attention than they do at present, has undoubtedly been the reason for such an unusual amount of attention being paid to the condition of the boys' heads in this school. The hair is kept comparatively very short, and at the weekly inspections the most scrupulous care is taken that not the faintest trace of diseased action shall escape notice. Of course no boy is admitted into the institution who shows any signs of unhealthiness, and though traces of having been formerly affected are now and then noticed, still no boy can be passed in whom a recurrence of disease can be at all suspected. Such cases, therefore, as do occur are developed within the school itself.

The old form of disease is now rarely met with, the most common affections being mild but rather persistent cases of Psoriasis, much resembling what vulgarly goes by the name, from its circular form, of ringworm, when it occurs in patches over the face, neck, or shoulders. More aggravated forms now and then occur, with others undoubtedly Herpetic (a disease of which shingles is one species). Including all, that is, the very mildest, which might be called insignificant cases, such as would in other schools pass utterly unnoticed, we may reckon on the average of the year about 60 cases.

As a rule these cases are confined to the younger boys, generally, in those susceptible to it, some few months after admission, depending on the season of the year; and it disappears towards 12 years of age, at a time when the physical powers are becoming more fully developed, more active exercise engaged in, and the constitutional powers

Appendix IV. (B.)

Hibernian School.

more defiant of external agencies. We regard the disease, in the school, as of little importance, it simply exacting from us some little additional trouble and an unwearying vigilant supervision.

Experiments of every kind have been tried on isolated cases in respect to diet and clothing, with a view to its eradication or prevention, but quite unavailingly. With only one fact are we acquainted, that it is always aggravated by cold bathing. These boys therefore are never allowed to go to the plunge bath; their ablutions are performed elsewhere.

From 60 to 90 boys are constantly entering the school annually to fill the vacancies left by volunteers to the army, so that fresh batches are imported into it quite prepared to be submitted to the influences which originate and keep up the disease. It will readily be seen, then, that we are never free from it.

The fewest cases are found towards the close of the year, October, November, December; we may say up to such times as usher in the cold and damp variable winds. Through the later winter and early spring months the cases gradually increase in numbers, the persistent cases which have lasted partially cured from the last season become intensified, and fresh batches are added, dropping in through the variable months up to the middle of June, a month which with us is usually wet and chilly. From this time, when the temperature has become steady and warm, fresh cases are extremely rare; the others become gradually less intractable, more easily cured, and the whole reduced in numbers; very many discharged never to return, some to pass through the ordeal of another season.

1869.	No. of Cases.
January -	53—57.
February -	57—58.
March -	58—67.
April -	63—66.
May -	66—70.
June -	68—78.
July -	78
August -	78—62.
September	66—56.
October -	53—50.
November	52—53.
December -	55—47.

From a review of this we are naturally led to the belief that the principal, if not sole cause, is climate; that the disease is due to the state of irritation in which the skin is kept by alternation of warmer intervals with days in which damp and cold are severely experienced, and in this opinion we are confirmed by finding that apace with these affections are associated such scrofulous and constitutional diseases as would likely be developed under similar conditions. We have therefore no hope of freedom from them, until we find ourselves more fully protected than we are at present from the cold damp winds to which our unfortunately rather exposed site render us liable, and for this we can only look forward to the remedy I have already proposed, a somewhat thick belt of suitably selected forest trees planted round the school.

May 3, 1870.

ROBERT TEMPLETON, Surgeon.

D.—CHARTER OF THE ROYAL HIBERNIAN MILITARY SCHOOL.

DATED 14 DECEMBER 1846.

APPENDIX IV. (D.)

Hibernian School.

VICTORIA, by the grace of God of the United Kingdom of Great Britain and Ireland Queen, defender of the Faith, and so forth, to all to whom these presents shall come, greeting: Whereas, by letters patent enrolled in Our High Court of Chancery of Ireland the fourteenth day of July, in the ninth year of the reign of His late Majesty King George the Third, His said late Majesty did grant, ordain, constitute, and appoint George, Viscount Townsend, then Lieutenant-General and General Governor of Our Kingdom of Ireland, and the Chief Governor or Governors of Our said Kingdom for the time being, and the several other officers and persons in the said letters patent particularly mentioned, and their successors for ever, to be one body politic and corporate, in deed and in name, by the name of "The Hibernian Society," in Dublin, for maintaining, educating, and apprenticing the orphans and children of soldiers in Ireland for ever, and by the same name to have perpetual succession: And whereas by letters patent enrolled in Our High Court of Chancery in Ireland, the sixth day of February, in the forty-eighth year of the reign of His late Majesty King George the Third, His said Majesty did grant, ordain, constitute, and appoint Charles, Duke of Richmond, then Lieutenant-General and General Governor of Ireland, and other the Chief Governor or Governors of Ireland for the time being, and the several other officers and persons in the said letters patent particularly mentioned, being the persons who then composed the said herein-before mentioned corporation, and their successors, for ever, to be one body politic and corporate, in deed and in name, by the name of "The Hibernian Society," in Dublin, for maintaining, educating, and apprenticing, or placing in His said Majesty's regular army as private soldiers, in such corps as from time to time He should please to appoint, the orphans and children of soldiers in Ireland for ever, and by the same name to have perpetual succession: And whereas the said letters patent last mentioned were duly accepted by the said corporation first herein-before mentioned: And whereas, by letters patent enrolled in Our High Court of Chancery in Ireland, on the seventh day of December, in the fifty-ninth year of the reign of His said late Majesty King George Third, His said Majesty did ordain, constitute, and appoint the said society and corporation, and their successors, to be thenceforth one body politic and corporate, in deed and in name, by the name of "The Hibernian Society," for the care of soldiers' children, and by no other name whatsoever: And whereas the said letters patent last mentioned were duly accepted by the said corporation secondly herein-before mentioned: And whereas in the same several herein-before mentioned letters patent respectively, and also in certain other Our letters patent, enrolled in Our said High Court of Chancery in Ireland, on the fourth day of March, in the fourth year of Our reign, certain clauses, provisions, and ordinances are contained for establishing and regulating the constitution, government, and management of the said corporation, and the property and institutions thereof: And whereas it hath been represented to Us, that in the progress of time, and in the working out of the ends and purposes for which the said letters patent were granted, the said society or corporation hath become more exclusively military in its objects, purposes, and management than it originally was, and that its institutions are now, and have for many years been principally used for and directed towards the maintaining, educating, and training for the purposes of enlistment and service in Our regular army, of such children of non-commissioned officers or soldiers as in said letters patent are mentioned, and that said institutions have for many years last past been principally supported by means of grants of money annually voted by Parliament for that purpose, as part of and included in the general army estimates of Our kingdom: And whereas it hath been also represented to Us, that the constitution and mode of government and management of the said corporation, and of its inhabitants, as established by the said letters patent, are in some respects unsuited to, or ill adapted for, the present objects and purposes of the said corporation, and that the ends and purposes for which the said letters patent were granted, and for which the said corporation hath been receiving the aid of Parliamentary grants as aforesaid, would be more effectually promoted, and Our military service in that part of Our said United Kingdom called Ireland more effectually and permanently benefited, if We would be pleased to grant to the said corporation new letters patent, making such alterations in the constitution and government of the said corporation, and containing such further and other clauses, provisions, ordinances, powers, or authorities as are herein-after expressed and contained: And whereas, at a general meeting of the said corporation duly convened and held under and pursuant to the said herein-before mentioned letters patent, on the 8th day of December 1846, a resolution was duly agreed upon and adopted by the said corporation, and under its common seal, to the effect following, that is to say, that such new letters patent as aforesaid, in such form and substance as herein-after set forth, would be received and accepted by the said corporation: And that the constitution and government of the said corporation should from the time of the granting of such new letters patent be founded thereon and regulated thereby; and the said corporation having besought Us to grant new letters patent to the effect and with the powers and clauses herein-after mentioned, We are graciously pleased to condescend thereto. Know ye, therefore, that We, of Our special grace, certain knowledge, and mere motion, by and with the advice and consent of Our right trusty and right well-beloved Cousin and Councillor John William, Earl of Bessborough, Our Lieutenant-General and General Governor of that part of Our United Kingdom of Great Britain and Ireland called Ireland, have made, ordained, authorized, constituted, and appointed, and by these presents, for Us, Our heirs and successors, We do make, ordain, authorize, constitute, and appoint Our right trusty and right well-beloved Cousin and Councillor John William, Earl of Bessborough, Our Lieutenant-General and General Governor of Ireland, and other Our Chief Governor and Governors of Ireland for the time being, the General Officer commanding the Forces in Ireland, the General Officer commanding the Dublin District, the Deputy Adjutant-General to the Forces in Ireland, the Deputy Quartermaster-General to the Forces in Ireland, the Officer commanding the Royal Artillery in Ireland, the Officer commanding the Royal Engineers in Ireland, the Officer commanding the Garrison of Dublin, Lieutenant-General Shortall, as Superintendent of the Magazine Fort, the Inspecting Field Officer of the Recruiting Service in Dublin, Commissary-General Haines, the Military Secretary, not under the rank of Lieutenant-Colonel, the Chief Commissioner of the Board of Works, being an Officer of the Army and not under the rank of Lieutenant-Colonel, the Inspector-General of Constabulary, being an Officer of the Army and not under the rank of Lieutenant-Colonel, the Military Commissioner of Police, not being under the rank of Lieutenant-Colonel, the Inspector-in-Chief of Revenue Police, being an Officer in the Army and not under the rank of Lieutenant-Colonel, the Assistant Adjutant-General of the Dublin District, not being under the rank of Lieutenant-Colonel, the Assistant Quartermaster-General of the Dublin District, not being under the rank of Lieutenant-Colonel, the Assistant Adjutant-General of the Royal Artillery in Ireland, not being under the rank of Lieutenant-Colonel, the Dublin District Commanding Officer of Royal Artillery, not being under the rank of Lieutenant-Colonel, the Dublin District Commanding Officer of Royal Engineers, not being under the rank of Lieutenant-Colonel, the Field Officers of the Garrison of Dublin, not being under the rank of Lieutenant-Colonel, the Principal Military Medical Staff Officer of the Army in Ireland, not being under the rank of a Deputy Inspector-General, the Deputy Judge Advocate-General of Ireland, and such others only, being Military Officers of rank not less than that of Lieutenant-Colonel, as shall from time to time be added to the number of said persons by Us or by the special appointment of the Lord Lieutenant or other Chief Governor or Governors of Ireland for the time being, anything in the said former letters patent to the contrary thereof in anywise notwithstanding, to be one body politic and corporate, in deed and in name, for the care of soldiers' children, by the name of the "Royal Hibernian Military School," and by the said name to sue and be sued, plead, and be pleaded to, answer and be answered to, defend and be defended, in all Courts and in all suits, plaints, and demands whatsoever, anything in any of the said letters patent aforesaid to the contrary in anywise notwithstanding: And we do hereby ordain, direct, and provide that the said name shall from henceforth stand and be in place and stead of the names or name so given as aforesaid in and by the said former letters patent or any of them: And further, We do hereby declare and grant, that they and their successors may have and use such common seal as they shall think proper, and that it may be lawful for them and their successors, to

change, break, alter, and make new the same, as they shall think fit: And further, We do hereby declare, and grant, that it may be lawful for them and their successors, by that name to hold and enjoy all and any manors, lands, tenements, hereditaments, rents, annuities, pensions, tithes, and all other real and personal estate now vested in or belonging to the said corporation created by the said letters patent, or any of them, and to purchase, have, take, receive, and enjoy, to them and their successors, in fee and in perpetuity, any manors, lands, tenements, rents, annuities, pensions, tithes, and other hereditaments in Ireland, not exceeding in the whole the clear yearly value of 2,000*l.*, and to take and receive any sum or sums of money, or any manner or portion of goods or chattels that shall to them be given, granted, devised, or bequeathed, by any person or person, bodies politic or corporate, capable of making a gift or devise thereof, and therewith and thereout to erect, maintain, and support in all places in Ireland, where they shall judge the same to be most necessary and convenient, such and so many schools or other institutions for the purposes aforesaid, as they shall think proper: And We do hereby direct that the said body corporate shall have a general meeting of the members thereof yearly, on some day in the month of November in every year, the particular day and place of holding each such annual general meeting to be appointed by the vice-president of the said corporation for the time being, and notice thereof to be given by summons in writing to be delivered to or left at the usual place of residence of each of the members for the time being of the said corporation, or so many of them as shall be then residing in or within five miles of the city of Dublin, three days before the day on which such meeting is intended to be held: And in case default shall be made by the said vice-president in appointing such day and place for holding such annual general meeting, and giving such notice as aforesaid, in any particular year or years, then that the annual general meeting for that year or years shall be held at the institution of the said corporation, at the Phœnix Park, or other the principal institution for the time being, of the said corporation, on the last day of November in such year or years, unless such day shall happen on Sunday, and then on the Monday following: And the said corporation shall also have other or special general meetings of the members thereof as often and when and where they shall think meet, and the vice-president for the time being, and also the committee for the time being, to be elected as herein-after provided, shall respectively have power from time to time when they shall respectively think fit, upon such notice and given in such manner as herein-before is directed, to summon and convene special general meetings of the said corporation; and any five members of the said body who shall convene or assemble at the said time and place for holding any such general meeting, whether annual or special, as aforesaid, shall be a quorum of the said general meeting, and be able and capable to do and transact all matters and things relating to the affairs of the said corporation, provided, however, that one at least of the officers next herein-after mentioned for the time being, that is to say, the General Officer commanding the troops in Ireland, the Deputy Adjutant-General, the Deputy Quartermaster-General, the General or Officer Commanding the District, the Officer commanding the Garrison of Dublin, the Officer commanding the Artillery in Ireland, the Officer commanding the Engineers in Ireland, or the Principal Medical Staff Officer in Ireland, shall be present at every general meeting: And Our further will and pleasure is, and We do hereby declare and grant, that Our Lieutenant General and General Governor of Ireland for the time being, shall be always the president, and the Commander of the Forces, or in his absence the General Officer Commanding the Troops in Ireland, shall be always the vice-president of the said corporation: And we do hereby empower, authorize, and require the Commander of Our Forces in Ireland for the time being, with the approbation of the Commander-in-Chief for the time being, to nominate such military officers as he shall from time to time think proper to fill the following offices under the said corporation, that is to say, the Commandant, the Adjutant and Secretary, and the Surgeon or Medical Officer: Provided, however, that the Officer appointed to be Commandant shall not be lower in rank than a Lieutenant Colonel, and the person appointed to be Adjutant and Secretary shall not be lower in rank than a Captain, such Officers so to be appointed by the Commander of Our Forces to be considered as purely military offices or appointments, and in rank equal to staff appointments: And We do further authorize, empower, and require the said body corporate, when they shall be assembled at any general meeting, to elect, by plurality of voices, such other officers, as also such servants as they shall find needful: And further, We do hereby direct, that the first general meeting of the said body corporate shall be held as soon as conveniently may be after the date of these Our letters patent, and that such first general meeting shall accordingly be summoned and convened by the said president or vice-president for the time being of the said body corporate, in such manner and upon such notice as herein-before is provided, with respect to the summoning and convening of general meetings: And We do hereby further empower, authorize, and require the said body corporate at their first general meeting to nominate and appoint seven of the said body, in conjunction with the vice-president, to be a committee to meet once in every month, between the 1st and 8th days of such month, or oftener as need shall require, either at the institution of the said body corporate in the Phœnix Park, or at such other place or places as the said body corporate, or the said president and vice-president for the time being shall from time to time appoint, of which place or places of meeting, and also of the time or times of holding the same, three days notice shall be given in such manner as is herein-before provided, respecting notices of the general meetings of said body corporate, and any three of the members of the said committee who shall convene or assemble at the aforesaid times and places shall be and constitute a quorum or full meeting of the said committee. And We do hereby direct, that in case the said vice-president shall be absent from any meeting of the said committee, the member of the said committee present at the commencement of the business of such meeting, who shall be highest in rank in Our service, shall be the chairman thereof. And We do hereby further direct and declare that the said committee are to be authorized and empowered to carry into execution such orders, rules, and directions as shall from time to time be made by the said corporation, and which committee shall continue to the first annual general meeting next following the said first general meeting, at which time and afterwards, at every annual general meeting, the said corporation shall nominate seven of their members in conjunction with the said vice-president to be a committee for one year for the purposes aforesaid, at which election or nomination not more than five members of the preceding committee shall be capable of being re-elected. And Our further will and pleasure is, and We do hereby empower and authorize the said corporation, at their general meetings, if they shall think it necessary so to do, to nominate and appoint lesser committees in all places where any schools shall hereafter be erected for the purposes aforesaid in the said letters patent, which lesser committees shall be appointed at such times and places, and continue for such time or times, as the said corporation shall think proper. And Our further will and pleasure is, and We do hereby further empower, authorize, direct, and require the said corporation, that whenever a vacancy shall take place in the said committee of seven, or in any of the said lesser committees, by death, resignation, or otherwise howsoever, then and in every such case the president or vice-president of the said corporation shall and do, within ten days after such vacancy shall be notified or known to him, summon a meeting of the said corporation to elect one of their body to supply such vacancy, and become and be a member of such committee respectively, from thence in like manner, and for the same period, as the person whose place shall be so filled would have been, if such vacancy had not taken place. And We do hereby further empower and authorize the said corporation, at their general meetings, to nominate and appoint fit persons in any place of Our dominions or elsewhere, to receive subscriptions, money, or other things contributed towards the said institution. And We hereby empower and authorize the said corporation to nominate and appoint fit and able persons to be schoolmasters in the schools or other institutions during the will of the said corporation, to teach the orphans and other children of soldiers in the said schools or other institutions to read, and to instruct them in arithmetic, and such other parts of education as to the said corporation shall seem meet. And We do hereby further authorize and empower the said corporation to nominate and appoint fit and able artificers to teach the orphans and other children of soldiers in said schools or other institutions respectively, such trades as may seem meet to the said corporation. And We do also further empower and authorize the said corporation to nominate and appoint chaplains for their respective schools during the will of the said corporation, to instruct such of said orphans and other children of soldiers in the said schools or other institutions as shall be Protestants of the Church as established in Ireland, in the principles of the Protestant religion established in Ireland, and at proper times and places to perform Divine Service, and all other religious rites and observances for the benefit of the said children,

Time of holding first general meeting.

Powers to appoint committee;

to meet once every month.

Three days notice of meetings to be given. Three to be a quorum.

Power to committee to carry out orders.

Not more than five of previous committee to be elected any year. Power to appoint lesser committees.

Vacancies in committees to be filled.

Meeting of corporation to be called within ten days, and a member to be elected to fill vacancy.

Power to appoint persons to receive subscriptions.

Power to appoint schoolmasters;

and artificers, to instruct children.

Power to appoint chaplains for Protestant children.

APPENDIX IV. (D.)

Hibernian School.

being such Protestants as aforesaid. But We do hereby declare and ordain, that every child of a Roman Catholic soldier shall, if it shall be so desired by the parents or guardians of such child, be exempted from receiving in any of the said schools or institutions instructions in the principles of the Protestant religion established in Ireland; and that every child of a Roman Catholic soldier, or the child of any soldier belonging to any sect of Protestant Dissenters, shall, if it be so desired as aforesaid by his parents or guardians, also be exempted from the duty of learning or being examined in the catechism of said Protestant Church, and shall also be exempted from attending public worship as performed in said Church, if same be inconsistent with the religious belief of such soldier. And further, We do hereby ordain and declare, that every such child be permitted, under such regulations as the discipline of the establishment may require, to attend the public worship of the religious persuasion of such soldier, at proper times and places, to be appointed and named by the said corporation, and then and there to perform their spiritual duties, and also to remain after Divine Service to receive religious instruction, for such time as may be specially appointed for that purpose by the said corporation. And for the more convenient attainment of the said last-mentioned objects, We do hereby empower and authorize the said body corporate, from time to time, to nominate and appoint priests or ministers of the Roman Catholic religion, or of any Protestant dissenting sect respectively, which said priests or ministers respectively shall be permitted at such times as the said body corporate, or the said committees respectively, shall from time to time direct, to visit the said schools, and then and there to instruct such of the said children as shall be of the religious persuasion of such priest or minister respectively, in the principles of their said religion, and also at the proper times and places, to be appointed by the said body corporate, or the said committees respectively, to celebrate or perform Divine Service according to the forms of such religion, and to perform and administer all other rites and observances of the said religions respectively, for the benefit of such of the said children as shall be of such religious persuasions respectively. And Our further will and pleasure is, and We do hereby direct, that all the officers under the said corporation shall be accountable to the committee of seven at all times, when required by the said committee; and the said committee are hereby required to report annually, at such times as the said corporation shall think proper, to the said corporate body, the state of the funds of the said corporation, the receipts and disbursements of the year, in order that they may be examined and entered in a book to be kept for that purpose, the said book and all the other books and papers of the corporation to be at all times open and free for the perusal of the several members thereof. And Our further will is, and We do hereby empower, authorize, and require the said corporation, at their said general meetings in all times coming, to make such rules and ordinances, and from time to time to alter the same, as they shall judge most convenient and needful for the good government of the said corporation, and management of the affairs thereof, and the effectual promotion of the good ends intended thereby, and to give such instructions, directions, encouragements, and salaries to those they employ as they shall judge needful and reasonable, such salaries, however, to be subject to the approbation of Our Secretary-at-War for the time being, and provided that the said rules, ordinances, instructions, and directions be not repugnant to the laws and statutes in force in Ireland, such rules, ordinances, instructions, and directions not to require any further confirmation or approval by any person or persons whatsoever, anything in Our said former letters patent to the contrary thereof in anywise notwithstanding. And Our further will and pleasure is, and We do hereby empower and authorize the said corporate body, and their successors, at any general meeting, to remove and displace any of the officers or servants of the said corporation so to be appointed by the said corporation as aforesaid, for any reasonable cause, and to elect others in the place or places of the person or persons so removed. And that as often as it shall happen that any of the officers or servants of the said corporation for the time being so to be appointed by the said corporation as aforesaid shall die or be removed for reasonable cause as aforesaid, or that any vacancy shall occur of any such officer or officers of the said corporation, it shall and may be lawful for the said corporation, and they shall be required within forty days, at a special general meeting, to be convened for the purpose, and in the summonses for which such purpose shall be stated, to choose and elect into the place or places of such officer or officers some other person or persons in the manner and subject to the regulations herein-before mentioned. And provided also, that it shall be lawful for the said committee of seven at any time or times to suspend from the exercise of their offices respectively, and from the receipt of any salary or emolument annexed thereto, the said officers or servants whose appointment is herein-before given to the said corporation, or any of them, for any act or cause which, in the opinion of the said committee, shall afford a sufficient ground for said suspension, to continue until the next general meeting of the said corporation, when such officers or officer, servants or servant, shall be either dismissed or reinstated, as to such general meeting shall seem fit. And Our further will and pleasure is, and We do hereby direct, that in case the president and vice-president shall be absent from any general meeting, that such member of the said corporation present at such meeting, and at the commencement of the business thereof, as shall be highest in rank in Our service, shall be chairman at such meeting, and such president, vice-president, or chairman shall have a casting vote in case of an equality of votes. And said president, vice-president, or chairman, at any of the said general meetings, and also the said chairman of the said committee of seven, at any meeting thereof duly convened, shall have power to administer an oath to any person or persons for discovering the truth of any matter or thing offered or proposed to the said corporation. And Our further will and pleasure is, and We do hereby direct, that no lease or leases of any lands or tenements belonging to the said corporation shall be made or executed, but at some general meeting of the said corporation, and that every lease so to be made shall be of lands, tenements, and hereditaments, in possession and not in reversion, and for a term not exceeding three lives or thirty-one years, wherein shall be reserved the best yearly rent that can be had for the said lands or tenements, at the time of making such leases respectively, without any fine or other income to be taken or had for the same; and that it shall not be lawful for the said body corporate to diminish their capital stock arising from the annual rent or income of any manors, lands, tenements, annuities, pensions, tithes, or other hereditaments whereof they shall be at any time seised or possessed, but that they shall confine their expenses yearly to such annual rent or income, and to such sum of money, goods, and chattels as shall from year to year be subscribed or given to them, or the interest or profits thereof, save and except as follows, that is to say, that the said corporation shall have the power of changing the nature of the property in manner here following, viz.:—We do hereby authorize and empower the said corporation to sell or dispose of any lands, tenements, tithes, or other hereditaments whereof they now are, or at any time or times hereafter may be seised or possessed, and to vest the money or produce arising therefrom in the Government funds of Ireland, or of Our United Kingdom, and from time to time to receive the interest and dividends thereon, for the use and support of the said corporation and its institutions. And We do also direct and ordain that no member of any of the said committees or of the said corporation shall at any time be eligible to any office of the said corporation to which any salary or emolument shall be annexed or shall belong. And We do also direct and ordain that no child or children shall be received into any school or institution of the said corporation, now erected or hereafter to be erected, unless a certificate shall first be obtained from some commissioned officer, or other credible person or persons, that such child or children is or are to the best of his belief the child or children of a non-commissioned officer or soldier of the line, or of a non-commissioned officer or soldier deceased or discharged, but that upon such certificate such child or children may be received and admitted, anything in our former letters patent, or any of them, to the contrary thereof in anywise notwithstanding. And Our further will is, and We do hereby direct, that in the selection of children for admission, preference in general shall be given:—

First, to orphans.

Secondly, to those whose fathers have been killed, or have died in foreign or home service.

Thirdly, to those that have lost their mothers, and whose fathers ase absent on duty abroad.

Fourthly, to those whose fathers are ordered abroad on foreign service, or whose parents have other children to maintain.

And that the parents or friends applying for the admission of children shall be required to sign their consent to such children remaining in the said Royal Hibernian Military School, as long as the said governors thereof may think fit, and to their being disposed when of proper ages, with their own consent, at the discretion of the governors, as

Roman Catholic children exempted from receiving religious instruction from Protestant chaplains. Also children of dissenters.

Roman Catholic and dissenting children to attend religious worship to which they belong.

Power to appoint Catholic and dissenting priests or ministers to give religious instruction and perform Divine Service; to celebrate Divine worship and give religious instruction to the children.

All officers to account to committee. Committee to report annually to corporation.

Accounts to be examined, and entered in a book, to be open to all members of the corporation.

Power to corporation to make rules and appoint salaries, subject to approbation of Secretary-at-War.

Power to corporation to remove officers and servants appointed by them, and to elect others in their places.

Meeting to be convened within forty days.

Summons to specify to elect officers.

apprentices or servants, or if boys, to their being placed with their own free consent in Our regular army as private soldiers, in such corps as it may be Our Royal pleasure to appoint. And lastly, Our will and pleasure is, and We do hereby declare and ordain, that these Our letters patent, and every clause, sentence, and article therein contained, or the enrolment thereof, shall be in all things firm, good, valid, sufficient, and effectual in the law, unto the said corporation, according to the tenor and purport thereof, without any further grant, license, or toleration from Us, Our heirs or successors, to be had, provided, or contained; Provided always, that these Our letters patent be enrolled in the Rolls of Our High Court of Chancery in that part of Our said United Kingdom called Ireland, within the space of six months from the date hereof, otherwise these Our letters patent to be null, void, and of none effect, anything herein contained to the contrary in anywise notwithstanding. In witness whereof, We have caused these Our letters to be made patent. Witness Our aforesaid Lieutenant-General and General Governor of Ireland at Dublin, the fourteenth day of December in the ninth year of Our reign.

BESSBOROUGH.

J. O'MEARA,
Deputy Clerk of the Crown and Hanaper.

Enrolled in the office of the Rolls of Her Majesty's High Court of Chancery in Ireland, the twenty-second day of December one thousand eight hundred and forty-six.

J. M'MAHON, Dy. K. R.

APPENDIX V.—SCHOOL OF MUSKETRY, HYTHE, AND SYSTEM OF MUSKETRY INSTRUCTION.

A.—QUESTIONS AND REPLIES ON THE SUBJECT.

QUESTIONS ISSUED BY THE COMMISSION.

I. Will you be good enough to give, for the information of the Commission, a general account of the objects of the School of Musketry, its present organization and staff, the mode and conditions of admission to it, the nature and length of the course of instruction, and the number of officers, non-commissioned officers, and men who pass through the various courses?

II. Will you furnish the Commission with a brief outline of the mode in which the system of Musketry Instruction is conducted and superintended throughout the service?

[*The above Questions were addressed only to the Commandant of the School of Musketry.*]

III. Do you consider the continued maintenance of a Central School of Musketry at the present time absolutely necessary; or is it your opinion that, the system of Musketry Instruction having been now established in the service, it would be possible to provide thoroughly qualified Musketry Instructors, like Adjutants, by a regimental system of training?

IV. Do you consider that the appointments of District Inspectors of Musketry could be abolished without detriment to the efficiency of the system of Musketry Instruction in the Army?

V. What is your opinion regarding the method and course of instruction, both theoretical and practical, adopted at the School of Musketry at Hythe?

VI. What is your opinion as to the efficacy of the system of Musketry Training (in its various details) at present in force in the service, the mode in which the theoretical and practical instruction is conveyed, and the value of the lectures delivered by the Musketry Instructors?

VII. Will you favour the Commission with a brief statement of any suggestions which you may think it desirable to make in reference either to the School of Musketry at Hythe, or the system of Musketry Instruction now in force?

VIII. (*Addressed only to Commanding Officers of regiments and battalions.*) What is the generally prevailing feeling among the officers, the non-commissioned officers, and the privates, respectively, of the regiment under your command, in regard to the mode in which Musketry Instruction is at present carried out?

The above questions were addressed to the following officers:—

Brevet-Colonel W. R. Haliday, Commandant of the School and Inspector-General of Musketry.
General the Right Hon. Lord Strathnairn, G.C.B., &c. &c., Commander of the Forces in Ireland.
Lieut.-General the Hon. Sir J. Yorke Scarlett, G.C.B., Commanding the Aldershot Division.
Lieut.-General Sir G. Buller, G.C.B., Commanding the South-Western District.
Lieut.-General Lord W. Paulet, K.C.B., Adjutant-General to the Forces.
Major-General Sir A. A. T. Cunynghame, K.C.B., Commanding the Northern Division of Ireland.
Major-General Sir John Garvock, K.C.B., Commanding the Northern District.
Major-General Sir C. W. D. Staveley, K.C.B., Commanding the Western District.
Major-General D. Russell, C.B., Commanding the South-Eastern District.
Major-General Freeman Murray, Commanding the Chatham District.
Major-General R. T. Farren, C.B., Commanding at Colchester.
Major-General R. Rumley, Commanding in North Britain.
Major-General G. Campbell, C.B., Commanding the South-Western District of Ireland.
Major-General A. Borton, C.B., Commanding the Curragh District.
Brevet-Colonel J. W. Armstrong, C.B., Deputy Adjutant-General, Ireland.
Brevet-Colonel C. Cameron Shute, C.B., Commanding 4th Dragoon Guards.
Brevet-Colonel V. Baker, Commanding 10th Hussars.
Brevet-Colonel S. G. Jenyns, C.B., Commanding 13th Hussars.
Brevet-Colonel F. C. A. Stephenson, C.B., Commanding Scots Fusilier Guards.
Brevet-Colonel T. E. Knox, C.B., Commanding 2nd Battalion, 9th Regiment.
Brevet-Colonel G. J. Peacocke, Commanding 1st Battalion, 16th Regiment.
Brevet-Colonel F. Pym Harding, C.B., Commanding 1st Battalion, 22nd Regiment.
Brevet-Colonel D. Anderson, Commanding 2nd Battalion, 22nd Regiment.
Brevet-Colonel R. W. Lowry, Commanding 47th Regiment.
Brevet-Colonel H. E. Weare, C.B., Commanding 50th Regiment.
Lieut.-Colonel J. S. Thomson, Commanding 54th Regiment.
Brevet-Colonel R. B. Hawley, Commanding 4th Battalion, 60th Rifles.
Lieut.-Colonel V. H. Bowles, Commanding 63rd Regiment.
Brevet-Colonel J. W. Thomas, C.B., Commanding 67th Regiment.
Lieut.-Colonel W. S. Cooper, Commanding 70th Regiment.
Lieut.-Colonel F. R. Mein, C.B., Commanding 94th Regiment.
Brevet-Colonel E. T. Gloster, Commanding 97th Regiment.
Brevet-Colonel J. R. Glyn, C.B., Commanding 2nd Battalion, Rifle Brigade.
Brevet-Colonel J. W. S. Smith, C.B., Commanding 1st Depôt Battalion.
Lieut.-Colonel Lord Elcho, M.P., Commanding the London Scottish Rifle Volunteers.
Lieut.-Colonel Viscount Bury, M.P., Commanding the Civil Service Rifle Volunteers.
Brevet-Colonel R. Bruce, Half-Pay, 2nd Regiment, late Assistant Inspector of Rifle Volunteers.*
Brevet-Colonel A. Lane Fox, Unattached, late Grenadier Guards.
Lieut.-Colonel R. J. Buller, 2nd Battalion Grenadier Guards, late Instructor of Musketry.

* Colonel Bruce requested not to be called upon for evidence.

APPENDIX V. (A.)

School of Musketry, &c.

Lieut.-Colonel E. S. Bridges, 3rd Battalion, Grenadier Guards, late Instructor of Musketry.
Major S. Fairtlough, 22nd Regiment, late District Inspector of Musketry.
Brevet-Major W. R. Annesley, 97th Regiment, District Inspector of Musketry, Dublin.
Captain D. Thompson, 67th Regiment, District Inspector of Musketry, Aldershot.
Captain J. M. C. Drake, Instructor of Musketry, Royal Engineers.
Captain H. B. H. Blundell, 2nd Battalion, Grenadier Guards.
Captain the Hon. H. Legge, Coldstream Guards, late Instructor of Musketry.
Captain Gerard Smith, Instructor of Musketry, 2nd Battalion, Scots Fusilier Guards.
Captain W. F. Carleton, 60th Rifles, late Instructor of Musketry to the Rifle Depôt Battalion, Winchester.
Captain A. S. Adair, Adjutant, Second Middlesex Rifle Militia.
Captain J. W. Madden, Adjutant, Royal Sussex Militia, late Captain Instructor of Musketry, 21st Depôt Battalion, Chichester.
Lieutenant W. J. Franks, Instructor of Musketry, 2nd Battalion, 15th Regiment.
Lieutenant A. R. Hutchinson, Instructor of Musketry, 1st Battalion 23rd Royal Welsh Fusiliers.
Lieutenant G. M. Douglas, Instructor of Musketry, 33rd Regiment.
Lieutenant A. M. Creagh, Instructor of Musketry, 42nd Royal Highlanders.
Lieutenant G. W. Wood, Instructor of Musketry, 56th Regiment.
Lieutenant C. J. Wyndham, Instructor of Musketry, 83rd Regiment.
Lieutenant W. Gatey, Instructor of Musketry, 100th Regiment.
Ensign J. J. Preston, Instructor of Musketry, 4th Battalion, Rifle Brigade.

(i.)—ANSWERS received from BREVET-COLONEL W. R. HALIDAY, Commandant of the School and Inspector-General of Musketry.

I. The objects of the School of Musketry (as a department) are two. First, the general supervision of the training of the troops armed with rifled small arms throughout the service, and the examination of the records of their practice annually so as to secure continued proficiency in the use of their weapons, and to have the means of scrutinising the vouchers for the actual performances for which money prizes are granted by the State. Second, the "school," properly so called, which is kept up for the purpose of training annually a considerable number of officers, non-commissioned officers and men, in the efficient use of their arms, in order that they may afterwards be useful in the instruction of their respective regiments or corps, and assist in maintaining uniformity of system in training the great body of the troops, recruits and drilled soldiers. And for the supervising branch and general responsibility, the Staff consists of the Inspector-General, assisted in his office by a staff officer (the deputy assistant adjutant-general), and two clerks (with occasional additional assistance), and nine district inspectors.

The Staff of the educational branch or school proper consists of a chief instructor (a lieutenant-colonel unattached), two captain instructors, and two subaltern instructors, with the necessary adjuncts of a paymaster, a medical officer, and an officer who is quarter-master and adjutant, with a due proportion of non-commissioned officers of various grades, a sergeant-major, quarter-master sergeant, orderly room clerk, paymaster sergeant, eight first class sergeant instructors, eight second class ditto, and eight third class ditto.

The chief instructor has the general control and responsibility; he delivers during each course lectures on certain subjects, which may be found in the authorised "Text Book for the use of Officers attending the School of Mus-" ketry;" examines every officer and non-commissioned officer who passes through the course as to their qualifications in imparting drill, in catechising and teaching the methods of keeping arms and ammunition in good order, in making up returns, in the use of instruments for judging distance, and the officers as to their capability for delivering lectures to their men; and he presides at the examination conducted in writing of the whole of the officers at the end of each course.

The daily instruction being carried on by wings, each captain instructor, assisted by one of the subaltern instructors, and a due proportion of the sergeant instructors, has charge of one half of the officers and parties sent to the school each course, and carries on the regulated course of lessons (including the lectures which they deliver), the preliminary drills, and finally the practices, which are all precisely the same as those required to be performed by each company of every regiment and corps annually; and they also instruct in the the use of stadia, in the method of keeping registers and other returns required (for musketry purposes) from regiments; and they assist the chief instructor in the examination of officers and non-commissioned officers before the latter can obtain certificates.

There are four courses of instruction carried on at the school each year, each of these lasting about eight weeks. For each course there are generally sent (detailed by the adjutant-general) 60 officers; of these 44 from the guards, infantry, and cavalry of the line and colonial corps, the remaining 16 being officers of the royal navy and royal marines, Indian Staff corps, and officers (generally adjutants) of militia and of the rifle volunteer corps; about 160 non-commissioned officers or petty officers, and sergeants of militia and volunteer rifles, and about 120 privates (among the latter however 40, or thereabouts, officers' servants who do not go through the course). The names of those proposed to attend are sent in to the Adjutant-General; those of the royal navy and royal marines by the Admiralty, of the Indian staff corps by the Secretary of State for India, and of the militia and volunteers by the heads of those branches of the army; and the officers of the guards and cavalry and infantry of the line are selected by the commanding officers when notified that they are to send parties of their regiments and the number that are to proceed. No preliminary examination or qualification has ever been required of the officers selected.

The course of instruction consists of the explanation in a few lessons, as concise and simple as possible, of the natural laws that affect the flight of projectiles, so that the the soldier may comprehend the objects of the various exercises and rules (he is afterwards taught), of certain drills or exercises intended to develop his muscular powers and his keenness of eye-sight, of lessons as to cleaning and keeping in perfect order his rifle and ammunition, and afterwards of practice at the target at the various distances, and also in judging distance in the field. The non-commissioned officers are taught, in addition to these, the method of using the stadio-meter for ascertaining distances, the details of the practices in judging distance and target practice, of keeping the registers of the various practices correctly, and of acting as drill instructors. And during the course they have every evening instruction from a schoolmaster in writing and arithmetic. They also learn how to instruct their men, and before they receive certificates of qualification are carefully examined in all these subjects, and finally by questions to be answered in writing to test their capabilities in arithmetic, &c.

The officers, in addition to the foregoing, are also practised in delivering lectures to the men, and catechising them on the simple theory and the mechanism of their arms, and rules for keeping them in good order; and those who desire a more extended knowledge of the subject attend the lectures of the Chief Instructor on the theory of projectiles, the history and manufacture of gunpowder, and the history of the invention and progressive improvement of small arms up to the present day. Before the end of the course they are all examined by the chief instructor as to their efficiency as drills, their facility in delivering the standard lectures to the men, and at the conclusion undergo an examination by questions which they have to answer in writing on all the subjects they have been taught at the school, and according to the number of marks each obtains, certificates of one or other of the three classes are given to those who qualify for them.

II. The mode in which the system of musketry instruction is conducted throughout the army will be found detailed in pages 6 to 85 of the "Regulations for con-" ducting the Musketry Instruction, &c., 1870," published by authority, the superintendence being under the commanding officer and the inspector of the district whose duty it is to visit all the corps in his district at uncertain times, to witness the practices and observe whether the regulations for conducting these are strictly adhered to, and to examine at the time of his visits the registers of these practices, so as to ascertain whether they are strictly correct, and to report to the Inspector-General any errors, irregularities, or omissions in these records, which would nullify their value as vouchers for the performances, so that no applications for prizes may be entertained which are vitiated by breaches of the regulations, or open to

suspicion of not being founded on actual attainment of the prescribed standard.

III. The maintenance of a central school certainly is, in my opinion, necessary. Though the system of instruction and of annual training has been established in the army for several years, and is now carried on with tolerable uniformity, the marked difference in the shooting of the various regiments and battalions shows that a large proportion of these have not yet attained the degree of proficiency they might have arrived at; and it would be vain to expect that even the present standard should be maintained, much more that continued improvement would be the result (as has hitherto been the case) if there were no normal school for training officers and non-commissioned officers. It might as reasonably be supposed that because a certain degree of execution and facility in playing the pianoforte is common among young ladies educated at home or in schools, that there is no further occasion for professional teachers, and that the younger pupils will pick up enough of instruction from the older and more advanced. A certain amount of proficiency might be kept up for a time but it would be likely to deteriorate, and on the introduction at any time of a new and improved arm, the want of a central authority to prepare and lay down rules for its use would be a serious inconvenience.

It must also be borne in mind that the school receives and trains not only officers and non-commissioned officers of the regular army, but also of the navy, the marines, the Indian Staff Corps, and of the militia, and rifle volunteers, as well as petty officers of the navy, and sergeant instructors for the militia and rifle volunteers.

IV. To abolish the appointments of the district inspectors of musketry would be, in my opinion, most injurious to the efficiency of the system. It is chiefly by means of the constant supervision these officers exercise over the corps in their respective districts that uniformity of practice and strict compliance with the rules for conducting the several exercises can be maintained. There is so much temptation, both from the wish that their own regiment or company should make a high figure, and that their men should get as many prizes as possible—and so much advantage towards these objects can be gained by relaxation or evasion of rules, that, without imputing to regimental officers any want of good faith, I must confess that I should not have nearly as much confidence as at present, in recommending men for prizes, that these have been fairly and bonâ fide won; and I have no doubt that a considerably larger expenditure for these prizes would be incurred annually. The services of the district inspectors are also, it should be borne in mind, available and are frequently called for to examine and report on ground for ranges, on proposals for the use, on payment, of ranges belonging to the militia and rifle volunteers by the regular troops, and they may be found still more useful if the reserve forces are more closely connected with the line and brought under inspection by the general staff.

V. I consider the system of instruction pursued at Hythe to be well adapted to the object, which is not to cultivate a high degree of scientific education or experimental research, but to impart to as many regimental officers and non-commissioned officers as can be effectively trained a sufficient knowledge of theory for all practical purposes, and adequate amount of exercise to enable them to use their arms to the best advantage, and induce them to cultivate dexterity by attention to rules and by taking advantage of opportunities for practice.

VI. The reply to the last question is very closely applicable to this. The regular course at Hythe is the same as that enjoined to be pursued annually by the companies of all regiments, and the lectures given to the non-commissioned officers and men are similar to those delivered to the young officers and soldiers of their respective corps, by the regimental instructors, who explain to them all that is necessary with respect to the natural laws that affect the flight of projectiles, and the "reason why" for the course of training and the rules they are taught in practice.

VII. I have no suggestions to make as to alterations in the course pursued either at the School of Musketry at Hythe, or the system of musketry instruction in the army generally. Modifications have already been made to a small extent in the details of the annual course, and of the lessons, and others may be from time to time adopted as may be thought advisable, but these would naturally occur in keeping pace with the future improvements in rifles, and they will probably be but small.

Wm. R. Haliday,
Colonel, Commandant,
Inspector General.

Hythe, 8th March 1870.

(ii.)—Answers received from General the Right Hon. Lord Strathnairn, G.C.B., &c., &c., Commander of the Forces in Ireland.

III. I do not advise the abolition of a central school of musketry, so long as a scientific rifle is the arm of British infantry. I do not see how the means for sufficient instruction in musketry could be provided in regiments.

IV. I consider the abolition of district inspectors of musketry unadvisable.

VI. I consider that this elaborate and scientific instruction is necessary for the proper use of this scientific weapon.

VII. My practical experience on this subject, derived from service in the field, is to the effect that soldiers are not taught at the school of musketry to fire at unusually short distances, or to judge distances in great inequalities of ground or mountainous country. For example, at Calpee the men of the camel corps of the 80th Regiment and Rifle Brigade, who had been brought up rapidly on camels to assist the right, weakened by bad ammunition and sun stroke, charged masses of the rebels that had debouched from the plains and almost overwhelmed that flank.

The rebels retired precipitately into the ravine before the camel corps closed with them. The camel corps therefore fired at them at the short distance of 20 or 25 paces, but the men not having been trained to fire at that short distance, there was hardly a casualty among the enemy. I have observed the same results when they were firing at the enemy at a great elevation, or separated from them by great inequalities of ground, where they could not measure the ground as they had been trained to do when at home.

One serious consideration I ought not to withhold from the Commission, which is, that the present rifle instruction is scientific and requires time, long or short according to the aptitude of the man. When, therefore, tropical diseases as in India are sudden and destructive, and casualties and hardships in the field carry off or render inefficient large numbers of combatants trained to the rifle, this scientific weapon will be placed in the hands of men who probably have not received the requisite scientific instruction, and then this arm becomes less useful than the smooth-bore musket.

Another practical consideration presents itself also; it cannot be denied that the *morale* of the British soldier was perfectly suited to the old musket. He waited coolly for his antagonist till he was within what may be called almost infallible aim, and then poured into him a steady and destructive fire. It was an axiom to wait with coolness for his enemy, fire deliberately at him, and then charge.

On this point there cannot be better evidence than the French officers who were engaged with the British armies in Spain, and who transmitted their impression on this point to their successors and relatives, who frankly attributed the success of the British troops to their superior fire, "*le feu terrible des Anglais.*" In short, they spoke on this subject in the same language which has subsequently been used by General Trochu in his pamphlet.

It is almost superfluous to state that the rifle of long range has altered the peculiar conditions which constituted this point of peculiar superiority of the British soldier.

As regards cavalry, I am of opinion that their instruction in the use of the scientific arm, the rifle, affects prejudicially the *morale* of the soldier, leading him to think more of his rifle than his sabre, of firing individually at his enemy instead of charging and closing with him with his sword.

In this sense I gave positive orders in the campaign in India that the cavalry were never to unsling or use their carbines without special orders from myself.

I know an instance when a regiment of cavalry, not part of my force, unexpectedly came upon two regiments of the enemy's cavalry, who were about to cut off the sick and a weak rear guard. The British regiment, wheeled into line, was opposite and close to the enemy; nothing could have saved the enemy's cavalry from destruction, but the commanding officer halted the regiment and gave the order to unsling carbines and to fire. The native regiment retired rapidly without, I believe, the loss of a man.

The effects of cavalry fire may be said to be almost *nil.*

There cannot be better proof of the difficulty of rifle instruction, and consequent inconvenience, that a large portion of the British army, during the season most favourable to drill and instruction, is employed in rifle instruction.

As regards field artillery, the fact ought not to be lost sight of, that the French never thought it advisable to adopt the very scientific gun that we did, and that we have fallen back upon their principle of field gun.

It remains to be seen whether so much scientific instruction is compatible with the quick firing arm now introduced.

The extreme shortness of notice given me for the answers to the questions, and the occupation of my time by military measures, caused by contested elections and the state of the country, prevent me from giving complete answers on this subject.

Strathnairn, General,
Commander of the Forces in Ireland.

(iii.)—Answers received from Lieut.-General the Hon. Sir J. Yorke Scarlett, G.C.B., Commanding the Aldershot Division.

III. Not absolutely necessary to be kept up as at present. Some school for examination of candidates for appointment of musketry instructor is necessary. I do not think it would be safe to trust entirely to knowledge acquired regimentally without examination by competent examiners.

IV. I consider four inspectors of musketry necessary; one at Aldershot, one at Dover, one in Northern district, and one for the Curragh and Dublin. All regiments would pass through these quarters periodically and come under inspection.

V. Somewhat too theoretical and abstruse for instruction in rifle shooting; practically good.

VI. The men are well trained and efficiently; but as regards old soldiers, I think it is a little overdone. They might be excused attending lectures and the theoretical instruction. Position drill should be given as required; judging distance is always useful; aiming drill and position drill with old soldiers should be given together. Explanation on the ground at the targets is of more use than lectures, which however I should not discourage for young soldiers. They are useful to the lecturer.

VII. I should prefer uniting the Hythe school with some central school for teaching the science and laws of projectiles generally, including small arms and large ordnance, over which some well known scientific officer presided with a moderate staff. At this school everything connected with fire-arms and propelling matter might be taught; every invention tried and recorded. Those attending might be divided into classes. The musketry instructor not required to do more than qualify himself to teach *practically* the use of the rifle, but should, of course, if desirous of doing so, within the limited time he could be spared from his regiment, be allowed the benefit of attending higher classes. By some such fusion I think considerable expense might be saved, and a more extended education be acquired.

J. Yorke Scarlett,
Lieut.-General,
Commanding Aldershot Division.

(iv.)—Answers received from Lieut.-General Sir G. Buller, G.C.B., Commanding the South-Western District.

III. I believe if it were possible to establish a *regimental* system of training, and that *commanding officers* were *capable* and *zealous*, taking a strong interest in the musketry practice of their regiments, it would be the best principle to adopt; and I see no reason why qualified instructors of musketry in regiments should not be provided, now that the system of musketry instruction has been so long established and studied.

IV. Since the adoption of the system of a *money reward* for firing, the superintendence over the returns of the several regiments has been made essential and necessary to protect the public against fraud and false returns; and a *district inspector* would *appear necessary*.

VI. and VII. I do not consider myself in a position to answer on any of these questions in a manner satisfactory to myself. The School of Musketry, however, at Hythe, seems in its results to have been a valuable institution, and the general musketry practice *throughout* the army is very good.

Previous to the introduction of the present system, and the general adoption of the *rifle*, the musketry practice of *battalions of the line* was a mere waste of ammunition; but in the battalion of the *Rifle Brigade* in which I served, and one which I commanded for many years, the ammunition was most carefully fired, and every shot recorded; and I believe, had the *same good weapon been in use*, the shooting of the men would have been quite as good as it is at present, even although the stimulus of the present money payment for the performance of a duty was wanting.

I am informed that the lectures delivered by the musketry instructors are useful to the recruits.

The duties of the regimental nstructor of musketry do not occupy him for more than seven months in the year.

George Buller, Lieut.-General,
Portsmouth, Commanding South-Western District.
21st March 1870.

(v.)—Answers received from Lieut.-General Lord W. Paulet, K.C.B., Adjutant General to the Forces.

III. I think it absolutely necessary, not only as a normal school for training musketry instructors, but as a means for ensuring a proper and uniform system of musketry instruction.

IV. I do not, as they are required to supervise the instruction, and prevent unfairness in marking, obtaining figure of merit, prizes, &c.

VI. I think very highly of it; the practical instruction is most useful, and the theoretical part is calculated to develope the natural intelligence of the soldier.

VII. I have no suggestions to make or alterations to recommend. A board of Officers of which I was a member assembled at the Horse Guards in 1866, and in consequence of their report the course of instruction was modified and simplified as much as we thought possible.

W. Paulet,
Adjutant General.

(vi.)—Answers received from Major-General Sir A. A. T. Cunynghame, K.C.B., Commanding the Northern Division of Ireland.

III. However perfect the system of musketry may be in the service, and however excellent the training of the regimental instructors, the maintenance of a Central School of Musketry will always be desirable.

The practice of rifle shooting has now become so scientific a study, that to derive the best results from the discoveries which are being daily made in England and foreign countries, there should always be a body of officers on the watch for any improvements, and having at hand the means and appliances for varied experiments.

IV. Yes. *Vide* VII.

VI. The system of musketry training in the service is efficacious, and very superior to that of foreign armies. It might, however, be still much improved by largely increasing the number of rounds allowed for the annual practice, and permitting a certain quantity of them to be expended in regimental and company matches.

The superiority in shooting of the volunteers to the regular army may, in a great measure, be attributed to the much larger amount of ball practice they go through.

Captains of companies should be allowed, with the concurrence of the regimental musketry instructors, to devote extra days training to such men as they consider require it, and should be permitted to draw an extra number of rounds for that purpose. When practicable, it would be most desirable for every soldier to fire a certain number of rounds each month. The interval of time between each annual course is now so long, that a man forgets much that he has learned of practical utility.

I consider the additional good shooting pay a most valuable incentive to the soldier to improve himself in rifle practice.

I consider that all officers below the rank of captain should go through a modified course of target practice yearly.

VII. The officers of the Central School of Musketry should be selected for their scientific acquaintance with everything connected with small arms. The mere mechanical training now carried on at Hythe should be delegated in a great measure to regimental instructors, but, in place of this, the officers at Hythe should devote themselves to the study of, and experiment in, every improvement or discovery likely to be of value to the musketry of the army.

I would dispense with district inspectors of musketry at home, and allow their duty of inspection to devolve on the officers of the School of Musketry, who should pay visits at uncertain times to the home districts during the practice season.

The regimental musketry returns to be sent to the central school for examination.

To reap all the profits from the experiments and scientific knowledge thus collected at Hythe, the instructor of each battalion accompanied by one officer, and two or three non-

commissioned officers should visit Hythe once per year, so as to bring away, for the benefit of his regiment, the knowledge of the latest improvements in drill and practice.

A. CUNYNGHAME, Major-General.
Commanding Northern Division of Ireland.

(vii.)—ANSWERS received from MAJOR-GENERAL SIR JOHN GARVOCK, K.C.B., Commanding the Northern District.

III. If the present system of thorough instruction is to be enforced, I consider that a central school is indispensable to furnish qualified instructors, and maintain uniformity of practice.

IV. I think not. Supervision is absolutely essential. Rifle practice is not so popular in the service as to make it safe to leave regiments without efficient supervision.

VI. I believe the prescribed system to be excellent, and effectual if properly carried out by instructors and commanding officers.

VII. I think it would be well to make the junior major in each regiment specially responsible for the returns and instruction.

Having no acquaintance whatever with the school at Hythe, I am not in a position to offer any suggestions in regard to it.

JOHN GARVOCK,
Major-General.

(viii.)—ANSWERS received from MAJOR-GENERAL SIR C. W. D. STAVELEY, K.C.B., Commanding the Western District.

III. I am of opinion that a Central School of Musketry is necessary, and always will be so; without it the system of instruction would certainly degenerate. If there was no central school there would be no competent authority to pass officers as qualified instructors; no regimental system of training could be depended upon.

IV. I think that it would be very detrimental to the efficiency of the system of musketry instruction to abolish the appointment of District Inspectors. These officers do a great deal of good; they point out defects in the instruction of the several regiments, keep up uniformity of system, and are of the greatest assistance to Commanding Officers. When I commanded a regiment, I always found that it derived great benefit from the visits of the Inspectors.

Commanding Officers cannot be expected to have that knowledge of all the details required for instruction that a trained Inspector of Musketry has, to enable him to keep the regimental instructors up to the mark.

Without the inspectors there would be no check against the system being incorrectly carried out, nor on the competition for marksmen.

VI. I think very highly of the efficiency of the system of musketry training in its various details at present in force in the service, the mode in which the theoretical and practical instruction is conveyed, and the value of the lectures delivered by the Musketry Instructors. If it is not quite as practical as it should be, it improves with each issue of new regulations, and unnecessary details become by experience gradually sifted out.

VII. The only suggestions I have to make are, that the duties of Instructor of Musketry and Gymnastics be, if practicable, combined, for the reason that the number of dutymen these exercises absorb prevent both being carried on conveniently at the same time, and that therefore during the time one instructor and his assistants are employed the others are sometimes idle.

I would raise the pay of the instructor, but take away his horse allowance, because it is very rarely, except in India, that his duties require him to use a horse.

C. STAVELEY, Major-General,
Commanding Western District.
Government House, Devonport,
17th March 1870.

(ix.)—ANSWERS received from MAJOR-GENERAL D. RUSSELL, C.B., Commanding the South-Eastern District.

III. Yes. There is a school to train riding masters, and ensure uniformity of equitation—there is a school to provide gymnasts—and another to furnish cooks. I consider a central school to educate officers and serjeants as instructors in rifle practice absolutely necessary. Without a school I fear the present standard of shooting would soon be lowered.

Some provision would likewise be required for the training of instructors for the militia and volunteer forces.

I think it is merely a waste of money sending privates to this school.

IV. No. A local supervising officer is necessary to ensure uniformity, and to prevent irregularities induced by a strong spirit of competition.

VI. The general system appears to be good, with the exception of the lectures on "Theory," which are unsuited to the capacity of most private soldiers. A few simple rules would be more useful for teaching men how to shoot, than the investigation of matters which the majority of the hearers do not comprehend.

In the case of serjeants, I would not alter the present lectures.

VII. Free the soldier from everything irksome, which is also unnecessary to train him to shoot well under all circumstances.

For prizes, fix a standard of excellence, and let every man who comes up to it receive his extra pay and badge. The present system acts unfairly, according as a man belongs to a good shooting or bad shooting regiment.

D. RUSSELL,
Major-General,
Dover,
21st March 1870.

(x.)—ANSWERS received from MAJOR-GENERAL FREEMAN MURRAY, Commanding the Chatham District.

III. I do consider the maintenance of a central school of musketry absolutely necessary, if the requisite average of good shooting is to be preserved in the army.

It is my opinion that it would not be possible to provide throughout the army thoroughly qualified musketry instructors by a regimental system of training.

I consider a central school of musketry a necessity, if only to maintain the requisite uniformity of system in the service.

Instructors, unless made to go through a special course unconnected with their regiments, would not attain so thorough a knowledge of their duties as they now possess, and the consequence would be that instruction in regiments would frequently dwindle down to a very meagre point.

Hythe necessitates a standard of excellence which, when once attained, is a source of pride to all officers who have obtained certificates from that institution, it being well known in the army that none but men really qualified as instructors can receive such certificates at that central school. In regiments under careless or inefficient commanding officers, certificates might be granted to individuals not thoroughly qualified to hold them. I am scarcely inclined to admit that the regimental system always produces very competent adjutants. An inexperienced young officer appointed adjutant may, if he has zeal, smartness, and intelligence, gradually acquire the requisite knowledge of his work under a good commanding officer; but, in the case of the musketry instructor, there would be no time for delay in acquiring proficiency, as the musketry instructor must enter upon his duties at once, and has not the commanding officer to fall back upon, his work being much more independent than that of an adjutant.

At the same time I admit that in battalions where rifle shooting and musketry instruction are encouraged by the commanding and other officers, musketry instructors, having a fair amount of proficiency, might be trained if some sort of school of instruction were established in each regiment; a system, however, which would be likely to lead to increased expenditure before long, and the success of which also would be very doubtful.

Supposing that a regimental system of training were to be established, the general standard of qualification would not, I believe, prove as high as it is under the present system. Now, 40 or 50 students of various ages, and from different regiments, are brought together for six or seven weeks' training with the one object—*musketry instruction*—under a very strict system, worked by officers unknown to them personally, having a staff of thoroughly qualified subordinates possessing great experience and practice, and the habit of imparting musketry instruction in all its branches.

For a special certificate, the candidates are required to possess a knowledge of the progress of discoveries and improvements in arms and explosive substances, and of their manufacture.

Now, without some central school there would be no security that the system of instruction had been carried on with sufficient stringency, or that the necessary attainments had been thoroughly acquired; the consequence of this

would be, that, before very long, musketry instructors would vary in ability and fitness for their appointments even more widely than adjutants do at present.

IV. I consider that the appointment of district inspector could not be abolished without detriment to the efficiency of the system of musketry instruction in the army. In my opinion, these officers are essential, and cannot too frequently visit the different practice grounds whilst the men are actually engaged in the course.

Their supervision I believe to be necessary to insure the accuracy of the registers, diagrams, and returns. These inspectors are the men who keep regiments up to the mark, and who can point out irregularities in time to have them rectified. They also keep the system of instruction uniform throughout the army. Indeed, without them, that uniformity could not be maintained. They prevent the wrong men from obtaining rewards, and keep officers in charge of parties from taking undue advantage of wind, weather, ricochets, &c., and thus often prevent dissatisfaction among the men who fire.

So far from considering that the appointment of district inspector of musketry could be abolished without detriment to the service, I am of opinion that some still more stringent supervision than now exists is needed from officers holding the positions that they do, in order to discover the cause of the great difference in figures of merit obtained by battalions.

The raw material from which battalions of the line are recruited is the same; they are supposed to go through the same training, they fire with the same rifle and ammunition; therefore, in cases where wide margins of results exist, under similar conditions of climate and practice, it would, I think, be advantageous if inquiry were made and the causes traced. It certainly appears as if some defect of zeal, instruction, or discipline must exist in the battalions that fall much below the average, or that there must be a want of close adherence to regulation amongst other battalions which in an equal degree *exceed* the average standard.

As I have said before, inspection by officers unconnected personally with regiments or battalions is much required, that it may be ascertained if registers, diagrams, and returns are kept according to regulation, that the public are protected in the issue of rewards, and that a check, in fact, is put on every kind of irregularity.

VI. My opinion is, that the results of the practice give satisfactory proof of the efficacy of the system which, as at present carried on, is an excellent one, tending to make every man a moderately good shot, without being which, armed as troops now are, he is useless as a soldier.

The system now in use enables the musketry instructor to test every man singly, and ascertain any defects in his sight or mental capacity.

The mode in which the theoretical instruction is conveyed, when combined with the practical teaching afforded by position drill, together with aiming and judging distance drills, must make any man of ordinary nerve a fair shot almost before he fires: the drills also set up and strengthen the men, whilst the aiming and judging distance drills encourage reasoning and observation on their part.

The lectures on theory tend to the same results and are good, for they afford the men a general knowledge of the construction of the weapon they use, how to clean that weapon, and the necessity for keeping it and its ammunition in proper order. I am, however, of opinion that these lectures might be simplified, and that the lessons teaching the soldier the names of the limbs and pins of the lock, and how to dismount and remount the lock and clean it, might be omitted.

Occasions seldom arise where skilled assistance is not at hand to repair or clean the lock, and many young soldiers injure their rifles in the attempt to pursue the knowledge of its construction which they have derived from the lessons referred to.

Officers and men, under the present system, evince, as a rule, considerable interest in their annual course, and especially as regards recruits, a great improvement, both mental and bodily, has been observed whilst the men have been under instruction.

With regard to the regimental instruction, I think that more might be done by the officers of companies in the instruction of their men; these latter are left too much to the musketry instructor, whose duty should be to supervise the officers of companies. The musketry instructor should be held more responsible, like the adjutant, for the discipline of the battalions, and should drill the men often in the platoon exercise, and see it thoroughly carried out on the established system; he should also look more to the carriage of the men, and not allow them to get into slovenly habits, which they often do at present, whilst engaged in the musketry course.

There should be parades on wet days in the barrack rooms, and the captains should, there, question their non-commissioned officers and men on what they have been taught.

VII. I think it would be advisable to introduce some system of marking which would inspire confidence in its integrity; this confidence, from one cause or the other, is not quite so strong as it ought to be.

All officers should be encouraged to become qualified musketry instructors. In the improved state of the British army, greater facilities should be given for the discharge of men who, from faulty vision or bodily defect, are habitual third-class shots. I believe that it would give great satisfaction to the soldiers, and encourage steady shooting and adherence to the rule taught, rather to under-estimate than exceed the distance, if ricochets were allowed to count *one point*.

I think no substitute could be found so effective for the good of the army generally as the School of Musketry at Hythe, from the strict supervision exercised there, the uniformity of system it enforces in the army, and the fact that whenever the desire to vie with others is introduced amongst officers of different regiments, a higher standard of proficiency is attained than if they had never been so brought together.

I consider that the appointment of district inspectors should not extend beyond three years, in order that more officers may be induced to become qualified musketry instructors, and that a greater number of rewards may be open to regimental captains in the event of their proving themselves to be thoroughly acquainted with all the details of musketry instruction, for special efficiency in which there will hardly be any prospect of other reward now that depôt battalions are done away with.

Freeman Murray,
Major-General,
Commanding Chatham District.

(xi.)—Answers received from Major-General R. T. Farren, C.B., Commanding at Colchester.

III. I consider the continued maintenance of a central school of musketry to be necessary in order to ensure the provision of thoroughly qualified musketry instructors, and I do not think instructors so well qualified or well grounded would be obtained by a regimental system of training only.

IV. The appointment of district inspectors of musketry could be abolished without detriment to the efficiency of the system of musketry instruction in the army, provided each regiment and corps at home be inspected once a year and the registers, &c. checked by a competent officer from the school of musketry, and that provision be made for a similar inspection by a competent officer in the cases of regiments abroad.

VI. The system of musketry training now in force works satisfactorily; the changes as regards simplification of returns and relieving trained soldiers from certain details in the annual course, also the arrangements as regards mode of payment of prizes being beneficial. My opinion is, that the mode in which theoretical and practical instruction is conveyed is good, and that the lectures delivered by musketry instructors are necessary in order to enable the recruit to understand the construction of his rifle and the principles of firing.

VII. Latitude should be allowed to the instructor in his explanation of the lessons laid down in the book of musketry instruction, so that he may adapt them to the capacities of the recruits under instruction, for instance, the 3rd lesson theoretical principles. The monthly progress return should be further simplified and contain only the month's work, and it has been also suggested that the returns now kept by the companies might be prepared by the musketry instructor, thus relieving the companies of those details.

Considering that the proficiency to which musketry practice has attained is due to the school of musketry, and looking to the advantages accruing from the training and supervision of such an establishment, giving as it does to those who have passed through its course a tone and a thorough grounding never lost, and exercising upon the army in a musketry sense the influence of an university, if I may so speak, I think its maintenance a necessity, and that its abolition would be a misfortune to the public service.

R. P. Farren, Major-General.

(xii.)—ANSWERS received from MAJOR-GENERAL R. RUMLEY, commanding in North Britain.

III. I consider a thorough and intimate knowledge of the use of his rifle, and its capabilities, of such paramount importance as regards the efficiency of the infantry soldier on active service in the field, that I cannot advocate the abolition of a central school of musketry, more especially at the present time, when the question of introducing another rifle into the service is under consideration; and I am of opinion that without a central school it would be almost impossible to furnish competent instructors thoroughly grounded in the prescribed system, or to enforce and maintain any uniform system of instruction.

IV. I do not think that the appointment of inspectors could be abolished without detriment to the efficiency of the system of musketry in operation in the army, a close supervision being absolutely essential for the maintenance of the system, and also to insure uniformity of practice.

To leave the system to be carried out regimentally and uncontrolled, would result in a large portion of the men being excused on various pretences. Each instructor would have different ideas, the majority would pride themselves on certain picked men for match shooting, who would doubtless have their powers fully developed, while the bad shots, those with whom by the existing system he should most concern himself, would be neglected.

VI. The present system is excellent (although it meets with little active support from the officers generally), and could be but little reduced or simplified; the practical results however can only be fully and fairly tested on the rare occasions of active service before an enemy.

On the other hand, the annual course unavoidably cuts up a regiment for three or four months, so as to interfere with battalion drills; it is also attended with inconvenience by removing servants, clerks, mess waiters and bandsmen; any failure of the system may therefore be fairly attributed to passive opposition, or, rather, indifference on the part of the commanding officers, of whom nine out of ten while admitting the necessity of the instruction yet practically view it as a nuisance to be got over as soon as possible.

On company officers the course entails a certain amount of dull, uninteresting, monotonous work—much responsibility for the returns—irksome detachments, sometimes under canvas—long marches to and from the ranges; so that it is not surprising that these officers should feel relieved when the course is over.

VII. 1st. Remove the central school of musketry to Aldershot where the inspector-general would have the opportunity of personally watching the system practised by every regiment in the service in the course of a few years.

2nd. All instruction should come from the seniors,—that subject, however, which they have not studied, and do not fully understand, will be regarded by them in a disparaging light, and as the tone of a regiment is generally taken from above, this feeling becomes more or less the fashion. I would therefore suggest that in every battalion the junior major should be the instructor of musketry, and held responsible for the course of instruction, with an assistant officer to train recruits, and to keep the returns, for which the junior major should be alone responsible.

The captains should, under the major, train their respective companies.

3rd. I much doubt whether the advantages anticipated from the annual publication of the Figure of Merit of the regiments in the service are not to a considerable extent counterbalanced, if not neutralized, by the means resorted to in some corps with the view of obtaining a precedence, thereby entirely frustrating the benefits arising from a proper spirit of emulation; moreover the Figure of Merit cannot be relied on as a true test of the relative shooting of different corps, since much depends upon climate, position of range, locality, and a variety of circumstances which materially affect the shooting, but are not generally considered by the public; at best, the Figure of Merit can only be accepted as an approximate estimate of the shooting of the army.

R. RUMLEY,
Major-General, N.B.

(xiii.)—ANSWERS received from MAJOR-GENERAL G. CAMPBELL, C.B., Commanding the South-Western District of Ireland.

III. I do think the central school is necessary, and I do not think a regimental system would work well.

IV. I think the district inspectors are essentially necessary.

VI. The present system is excellent.

VII. I have no suggestions to make.

G. CAMPBELL, Major-General,
Commanding South-western District,
Ireland.

Cork,
20th March 1870.

(xiv.)—ANSWERS received from MAJOR-GENERAL A. BORTON, C.B., Commanding the Curragh District.

III. My belief is that no system of regimental training would ensure thoroughly qualified instructors, and that the abolition of the Central School would prove very injurious to the efficiency of our army.

IV. Certainly not; I am of opinion that the good working of the present system is mainly attributable to the active supervision of the district inspectors, who could not be dispensed with.

VI. The progressive improvement in the shooting of the army has been so marked that I have seen no reason to criticize the system unfavourably. The practical instruction appears to be all that could be desired, and produces many excellent shots amongst men who have been able to benefit but imperfectly from the theoretical explanations afforded to them. I mistrust the efficacy of the lectures to a great extent, and believe that, to most men, they are a source of weariness rather than of benefit.

VII. I have no suggestions to offer on these heads.

A. BORTON,
Major-General.

Curragh Camp,
19th March 1870.

(xv.)—ANSWERS received from BREVET-COLONEL J. W. ARMSTRONG, C.B., Deputy Adjutant-General, Ireland.

III. I do consider it absolutely necessary.

A regimental system would not, in my opinion, provide thoroughly qualified musketry instructors.

Our army, in comparison with those of Continental powers, is numerically so weak that it is a matter of vital importance to render it and maintain it as efficient and formidable as possible, and to compensate for disparity in numbers by the highest skill and proficiency in the use and practice of the rifle by the troops.

IV. I am decidedly in favour of continuing the services of these valuable officers; if abolished, the system of musketry instruction would suffer; neglect and irregularities would be the certain result.

VI. The system of musketry instruction, both theoretical and practical, is in my opinion excellent. With regard to the value of the lectures delivered by musketry instructors, much must depend upon the ability, knowledge of his subject, and manner of delivery of the instructor. As a rule the soldier listens with much interest and attention to a good lecturer.

VII. I would suggest that more care and attention be devoted to the instruction of the recruit. To make soldiers expert marksmen the first step should be to subject him to the most careful and thorough training in the use of the rifle on first joining. To ensure so desirable an end, the very best and most intelligent instructors and "drills" should be kept with the depôt companies. The judging distance practice should be more carefully executed by regiments than at present, and the companies exercised in new and varied country. On questioning men during route marches their answers are remarkable for inaccuracy and discrepancy as to the distance of objects. As the regiments of the line possess so many excellent marksmen, it seems much of their value and skill is lost by not developing more fully their capabilities as light troops. As it is now the good and indifferent shot act together, and stand side by side; the former can have no confidence in the latter. A special training in a more advanced kind of skirmishing drill might prove advantageous to the service, and an incentive to the good shots of a battalion.

J. W. ARMSTRONG,
Colonel, D. A. G.

(xvi.)—ANSWERS received from BREVET-COLONEL C. CAMERON SHUTE, C.B., Commanding 4th Dragoon Guards.

III. I think the maintenance of a central school of musketry necessary. I do not think that qualified musketry instructors could be provided merely by a regimental system of training.

IV. I do not think that it would be desirable to abolish them for the present, unless one of the district staff officers could undertake some of the duties.

V. I consider it good. Those officers of my regiment who obtained first-class certificates at Hythe or Fleetwood have proved themselves good instructors.

VI. I think the system answers well. My regiment has been for two years at the top of the cavalry. I encourage matches, and occasionally shoot myself.

Every instructor cannot, of course, lecture well.

VII. In cavalry a large proportion of blank ammunition is necessary for the training of horses; but in infantry I would rarely have it used, except at grand field days, and on the latter occasions it should be used sparingly on principle; only 5 or 10 rounds should be given to the men, other 5 or 10 rounds at a time being supplied from the rear, as the expenditure renders necessary. This would be good practice and make the men value every round of even blank ammunition. In place of the present large supply of blank ammunition I would give the troops an increased quantity of practice ball ammunition. It is from having much more target practice that volunteers so often beat the line.

VIII. I think they take great interest in it.

C. C. Shute, Colonel,
Commanding 4th Dragoon Guards.

(xvii.)—Answers received from Brevet-Colonel V. Baker, Commanding 10th Hussars.

III. I think that the Central School of Musketry should be maintained.

IV. No.

V. I am not personally sufficiently acquainted with Hythe to be able to answer with any authority.

VI. and VII. I think the general system is good, but the amount of ball cartridge allowed to the troops for practice is far too small.

VIII. In cavalry regiments musketry instruction interferes so constantly with other duties that it has never been popular. Even the modified system allowed, it is often difficult to carry out; and as first the Musketry Instructor and then the Serjeant Instructor of Musketry were abolished, no proper staff has lately existed for maintaining the system on an effective footing. I do not think the first was requisite, but the Serjeant Instructor was very necessary. I would not abolish musketry instruction in the cavalry.

V. Baker, Colonel,
10th Hussars.

(xviii.)—Answers received from Brevet-Colonel S. G. Jenyns, C.B., Commanding 13th Hussars.

III. I *decidedly* think the Central School of Musketry necessary in order to ensure a uniform system, and for the training of musketry instructors.

IV. I think District Inspectors of Musketry quite unnecessary.

VI. I think the system very good in every branch.

VII. The great difficulty with respect to musketry instruction in the cavalry is the dislike officers have to the post of musketry instructor.

I should like to see a modified course of instruction *compulsory* (at the Central School) on officers when they obtain their lieutenancy.

I would suggest that pay be given *six* months in the year to musketry instructors.

In cavalry, where men have so little spare time, I would shorten the course of preliminary drills and substitute more actual ball firing.

I also decidedly think a paid sergeant as Assistant Musketry Instructor necessary in cavalry. (It is now, I am sorry to say, abolished.)

VIII. Of course musketry instruction entails very hard work on cavalry soldiers while it is carried on; but I have had no complaints, as a great many men take an interest in the ball firing.

The post of instructor, now that the pay is so little, is a most unpopular one.

My musketry instructor has left, and I cannot get any officer to volunteer to replace him. There was no difficulty when the instructor was fairly paid and he had a paid assistant.

Soame G. Jenyns,
Colonel, 13th Hussars.

(xix.)—Answers received from Brevet-Colonel F. C. A. Stephenson, C.B., Commanding Scots Fusilier Guards.

III. Yes, it is necessary for the proper qualification of musketry instructors and their serjeants. A regimental system would be inadequate.

IV. No; this officer is necessary to ensure uniformity of system, check returns, and guarantee fairness of competition.

VI. I think that the present system is excellent, including the mode of instruction; the value of lectures, except to recruits, is not of much account.

VII. I cannot at the present moment think of any improvement to suggest. Some of the winter parades might, perhaps, be discontinued, as well as some returns.

VIII. They take a great interest in the annual practice, which is, I think, increasing. They feel great pride in being well placed in the annual army competition; it enhances *esprit de corps*.

F. C. A. Stephenson, Colonel,
Scots Fusilier Guards.

(xx.)—Answers received from Brevet-Colonel T. E. Knox, C.B., Commanding 2nd Battalion 9th Regiment.

III. I do not consider the maintenance of a central school of musketry necessary at the present time. I am of opinion that musketry instructors could be provided by a regimental system of training.

IV. I consider that district inspectors of musketry could be abolished without detriment to the efficiency of the system of musketry instruction in the service.

VI. I think the present system a good one.

VII. I have no suggestions to make.

VIII. The course at Hythe is irksome and unpleasant to officers and men; but I do not think that the same can be said about the annual course as practised at head quarters of regiments, as all ranks feel great interest in it.

Thomas E. Knox, Colonel,
Lieut.-Colonel, Commanding 2nd Battalion,
Warley, March 22, 1870. 9th Regiment.

(xxi.)—Answers received from Brevet-Colonel G. J. Peacocke, Commanding 1st Battalion 16th Regiment.

III. I consider that the Central School of Musketry should be maintained in its integrity.

Duly qualified instructors could be trained regimentally, but the progressive character of the system, and its uniform application to all regiments would be sacrificed. The conditions under which the regiments practised would soon cease to be similar, and the value of competition would be lost.

IV. I consider that district inspectors of musketry should continue to be appointed. They ensure the system being strictly carried out; they support the musketry instructors in doing their duty; they are often of use to commanding and general officers in giving advice and making reports in points connected with musketry, and by checking and condensing into a compact form the work of their districts, they must be of great service to the central authorities.

VI. In my opinion the present system of training is effective, and the method of instruction is good. The value of the lectures depends much on the discretion of the instructor. Considering the variety of the minds addressed, I think the lectures should embrace all the subjects they now embrace; one man picks up one thing, another man another thing; but the lecturer should exact of all the men a knowledge of only the more important and practical points, and follow up the more scientific points with only those who showed a capacity and a wish to understand them.

VII. I consider that "independent firing" and skirmishing up to 400 yards, at distances as much as possible unknown, and without raising the back sight, should be more practised.

That the men should be trained to fire at moving objects, or at a target exposed to view only for a few seconds, the time varying with the men's proficiency.

That the necessity of training the men to "judge distance" across ravines, broken ground, and water, should be more inculcated on instructors and commanding officers.

That the servants of field and staff officers, the mess servants, and a few other men whose absence causes much

inconvenience, should not be obliged to go through the annual course after they have once shot in the first class.

VIII. The officers under my command approve generally of the present system, and take a pleasure in carrying it out. The non-commissioned officers and privates, as a rule, like going through the annual course, finding in it a relief after the monotony of their usual work. Sometimes, when the ranges are far from their barracks, they find the day's work hard.

George Peacocke, Colonel,
Lieut.-Colonel, 1st Battalion
19th March 1870. 16th Regiment.

(xxii.)—Answers received from Brevet-Colonel F. Pym Harding, C.B., Commanding 1st Battalion 22nd Regiment.

III. No. I consider that musketry instructors should be provided by a regimental system.

IV. Yes.

VI. The system of preliminary drill I consider good; the firing is not extended over a sufficient length of time; the lectures are generally listened to with impatience.

VII. The firing should be extended over a greater number of days; eight or ten days' firing are not sufficient in the year.

VIII. I think that officers, non-commissioned officers, and men are only too anxious to hurry through the practice.

F. Harding,
Colonel and Lieut.-Colonel,
Commanding 1st Battalion 22nd Regiment.

Tuam,
19th March 1870.

(xxiii.)—Answers received from Brevet-Colonel D. Anderson, Commanding 2nd Battalion 22nd Regiment.

III. I am of opinion that the maintenance of a central school of musketry is necessary.

Unless complete uniformity exists in the carrying out of the musketry course, the annual final classification of regiments, &c. in their order of shooting, also the issue of decorations and money rewards for good shooting to soldiers, would not be deemed so satisfactory, or so fair a competition as it is at present.

This uniformity can only be ensured by training the regimental instructor at a central school of musketry.

IV. District inspectors of musketry might be abolished at home, except at Aldershot and the Curragh, where frequent supervision of several regiments during the musketry course can be easily carried out.

The regimental returns might all be checked at the Central School of Musketry by a special department for that purpose.

In the several presidencies of India, and at certain colonies, an inspector would be necessary to check the above returns, in lieu of this being done at the central school in England.

V. Not acquainted personally with Hythe.

VI. The practical portion of the instruction is good, and there is absolute necessity for theoretical instruction as well as practical; the amount of theoretical instruction retained by the men varies according to the power of the lecturer to obtain and hold their attention.

VII. The Central School of Musketry should gather and impart information on the progress of fire-arms, the varieties of gunpowder, cartridges, &c., of foreign as well as of our own country, as part of the course; while at the central school, regimental officers and parties should have this information conveyed to them by lectures illustrated by specimens of the several arms, &c.

A collection of arms, &c., comprising the latest approved inventions, should be maintained at the school, easily accessible to the officers and to such soldiers as show interest in the subject.

I believe that officers returning to their regiments after obtaining this additional instruction would be able to lecture to the men with more satisfaction to themselves, and with more power and scope to interest them.

VIII. Favourable as regards the practical portion, but less so as regards the benefit the men retain from the theoretical.

D. Anderson, Colonel,
Sheffield, Commanding 2nd Battalion,
20th March 1870. 22nd Regiment.

(xxiv.)—Answers received from Brevet-Colonel R. W. Lowry, commanding 47th Regiment.

III. I consider the maintenance of a central school of musketry at the present time most desirable, it imbues men with a thorough spirit of musketry, and I doubt the possibility of providing well qualified instructors, like adjutants, by a regimental system of training.

I am of opinion that, without such school, the standard of efficiency, with regard to a real knowledge of the subject, would soon be lowered.

(I have always considered that the establishment of a central school, even of *drill*, and of the theory and practice of moving troops, would be attended with great advantage to the public service).

IV. The office of district inspector appears to me to be useful as keeping a wholesome check on the way the system of instruction is carried on by regimental instructors, on any attempts at unfair practices, and in ensuring uniformity in the drills and practices by different corps.

I doubt not also that his support to the regimental instructor may at times be required and valuable, but, as far as the "Returns" are concerned, I think they, and the correspondence connected therewith, might in a simplified form go direct from the regimental instructor to the inspector general.

V. I am not, myself, acquainted with the school of musketry at Hythe, though I so far recognise its merits that I give every encouragement to young officers and non-commissioned officers to avail themselves of its teaching, and I think the service would benefit if its instruction had a more extended sphere.

There does not appear to me, however, to be any reason why as high a qualification and certificate should not be required for an officer appointed to instruct a *regiment*, as for one for the same appointment in a *depôt battalion*; certainly none, now that each regiment at home has a depôt of young recruits attached to it for training, &c.

The present and late regimental instructors have brought to my notice, that they consider too much stress is laid at the school on the theoretical lectures being delivered *verbatim* from the book.

VI. I have no doubt that the musketry training now in force has greatly improved the shooting of the army, and created an interest in the subject, which is of itself of no small advantage.

As to details, it occurs to me, and has been brought to my notice by the instructor of the regiment under my command, that the rapid independent firing (now a part of the annual course) is a mistake.

The practice is rarely good, and the tendency of men using breech-loaders is naturally to fire too quickly.

If it were only to give the soldier reasons for all the rules he is called to attend to in practice, I think the lectures useful. They must, however, be simple and attractive, and adapted to the capacity of all. They might be given with good effect to *trained soldiers* as well as recruits.

It was perhaps too great a rise in the standard (below which shooting is considered bad) from 80 to 110, and it is questionable if it will not lead to unfair practice being attempted.

I would increase the number of rounds fired annually and individually, 60 not being, I consider, sufficient to make the soldier thoroughly master of his rifle.

To test knowledge of distance, it might be well to have more firing at *unknown* distances; skirmishing being at the present the only practice in which the distances are not known.

As on service the distances would, for the most, be unknown, more attention ought to be paid to this branch of the subject.

R. W. Lowry,
Colonel Commanding 47th Regiment.

(xxv.)—Answers received from Brevet-Colonel H. E. Weare, C.B., Commanding 50th Regiment.

III. I consider, under the constant scattered state of regiments, particularly in Ireland, that a central school of musketry is absolutely necessary.

IV. The district inspector might, in my opinion, be abolished now the system is so well established, if the regimental instructor was held more responsible, and in obtaining the appointment, was made fully to understand that he was to resign at the call of his commanding officer, if not found fully up to the mark. It is not every officer who obtains a first-class certificate that has the aptitude for a first-class instructor.

VI. The want of some modification is a serious evil, of which I have had practical experience since the drill season

commenced on the 14th March, scattered as my regiment is in three places.

VII. I should like to see more ball practice, and do not consider ten rounds expended in skirmishing sufficient. If a man fires well skirmishing, he will shoot well in any other way.

VIII. The general feeling of the non-commissioned officers and men is that the present instruction is good. Some of the officers perhaps not so much so.

H. E. WEARE, Colonel,
Commanding 50th Regiment.

Horfield Barracks, Bristol,
28th March 1870.

(xxvi.)—ANSWERS received from LIEUT.-COLONEL J. S. THOMSON, Commanding 54th Regiment.

III. It would, I consider, be detrimental to the interests of the Service, were the maintenance of a Central School of Musketry discontinued; I can speak from my own experience as to the benefit which has resulted from having both officers and men trained at this establishment, and I invariably notice that those who have undergone a course of musketry training at Hythe, evince a much greater interest, and consequently take much greater pains in the instruction of their companies. Though no doubt it would be possible to provide qualified instructors by a system of regimental training, I do not think it would be found so effectual a plan as that now in operation.

IV. I consider the appointment of District Inspector of Musketry (an officer thoroughly conversant with the minutest details of the system) necessary to exercise a supervision over the regimental instructors, and to ensure uniformity and accuracy in keeping returns.

VI. On the whole I am of opinion (with the exception of the suggestions which I make below), that the present system of musketry instruction is calculated to develop the efficient use of the rifle to its fullest extent. That the mode of conveying the theoretical and practical instruction is very good, though the effect of such instruction must depend entirely on the talent of the instructor, and the interest he takes in his work, and that the lectures can be made of great value, particularly in the case of recruits, by making the soldier take much more interest in this important part of his training than he would were he left in ignorance of the *reasons* for observing the rules which must be attended to in practice.

VII. I would suggest the following alterations:—

1st. That position drill be executed without the knapsack, the strap of which prevents the soldier from getting his rifle into the hollow of his shoulder.

2nd. That the extra position drills be "executed frequently" only during the continuance of the annual course, viz., from 1st April to 31st October, as the practice is of little use when mitts are worn, and during the cold weather is regarded with disfavour by the men.

3rd. That the number of points required to pass from the 3rd into the 2nd class, be reduced from 36 to 30, as I am convinced that some men are physically incapable of obtaining the former number, and also that it is advisable to make it as easy as is practicable without loss of efficiency to pass out of the 3rd class, for many soldiers, though unable to shoot well standing, are fair shots kneeling or lying down.

4th. That the judging distance practice, instead of being divided into classes and limited as to distance in each class, be executed without these restrictions, which would have the effect of making each man rely more on his own judgment than is the case at present, and would considerably extend his experience.

This alteration would of course necessitate a change in the regulations regarding points.

VIII. I think the prevailing feeling among the officers—non-commissioned officers and privates of the regiment under my command—is favourable to the present system, as far as the annual course is concerned, but the extra position drills in winter is very irksome to both officers and men. In proof of the interest taken by the men in the actual shooting, I may mention, that during the time my regiment was quartered in Belfast, upwards of 400 men used voluntarily to subscribe 1*d.* per week for the purpose of buying extra ammunition for shooting matches.

J. S. THOMSON, Lieut.-Colonel,
Commanding 54th Regiment.

(xxvii.)—ANSWERS received from BREVET-COLONEL R. B. HAWLEY, commanding 4th Battalion 60th Rifles.

III. The continued maintenance of the Central School of Musketry I do not now consider necessary.

The school has done great good in its time, and the system it has produced has so thoroughly taken root in the army, battalions can by themselves provide instructors quite capable of teaching all ranks.

IV. I would abolish the office of District Inspector, the Inspectors have never been of great use. The returns sent through them should pass to the Officer Commanding the Brigade through his staff officer.

VI. The present system is good, the theoretical portion consisting only of explanations on the mechanism of the lock, cleaning and loading the rifle, the reasons for elevation and nature of the damage which would affect its shooting.

The practice register should in EVERY CASE be kept by Officers; if they fall into the hands of Non-Commissioned Officers they are valueless.

The Rule for determining the value of a Battalion's shooting must be false at present, for (on reference to the Horse Guards Report of Practice of the Army, 1868–69), it will be seen the 1st battalion 13th Regiment is placed as the 2nd best shooting Regiment in the Army, with a per-centage of marksmen of 12·06, whilst the 4th battalion 60th Rifles is only 15th on the list, with a per-centage of 29·46 of marksmen.

Marksman's pay should be distributed so that a battalion having 200 marksmen receives a larger sum than one having only 100, and should be paid as formerly daily.

When firing in close order (*i. e.* in the ranks) men should be taught farther than they are at present to hit objects without making use of the back-sights.

VII. To insure similarity of practice, the maintenance of system, to introduce necessary changes, and for other obvious reasons (the Central School being abolished), there should be an officer of the Adjutant-General's department. Horse Guards (Assistant Adjutant-General), whose special duty it would be to overlook the rifle shooting of the Army.

I would encourage the Officers of the Army, Militia and Volunteers to contribute short papers on Rifle Shooting for publication (on approval) in the annual report issued by the Horse Guards; at present it is a dry publication, seldom looked at out of the orderly room.

Troops, when ranges are *at all* distant from Barracks, should be camped for rifle practice.

VIII. As regards the mode in which rifle practice is at present carried on, &c. it has, for the 10 years I have commanded a battalion, been most popular with all ranks.

Almost every season the companies at practice have been under canvas in a wild country, and by the officers handling the men well the rifle season becomes a holiday time.

The plan of making a battalion practise position drill weekly when not firing is *bad;* the necessity for it being doubted by all, it becomes merely an annoyance; regarded as such, it is of no practical use and is carried on without spirit.

Abroad a fair quantity of ammunition was allowed for match shooting, which commanding officers gladly availed themselves of; you cannot get it at home.

In place of the present plan of each battalion having one Subaltern as Adjutant and a second as Rifle Instructor, I would amalgamate the duties of these Officers, further substituting for the two Subalterns a Captain and a Subaltern, to be denominated Captain and Adjutant and Lieutenant and Adjutant. These appointments to be held by the same Officers only three years, with pay and allowances as at present.

R. B. HAWLEY,
Colonel 60th Rifles,
Commanding 4th Battalion.

Aldershot,
21st March 1870.

(xxviii.)—ANSWERS received from LIEUTENANT-COLONEL V. H. BOWLES, Commanding 63rd Regiment.

III. I do not consider the continued maintenance of a Central School of Musketry necessary, as it would be possible to provide musketry instructors qualified by examinations, held periodically, before a board having as president a district inspector of musketry.

IV. I consider the appointment of district inspector of musketry should *not* be abolished.

VI. I consider the system of training and the mode of instruction very efficient, and that the lectures are well calculated to induce the recruit to take interest in the instruction.

VII. I consider that the system of instruction, as regards the practice, might be altered, so that companies might go through the annual course in a shorter space of time, and, by such arrangement, leave more opportunity of exercise in drill for the battalion.

VIII. The general opinion prevalent among the officers, non-commissioned officers, and men of the regiment under my command is that the existing method of instruction is very good.

VERE H. BOWLES, Lieut.-Colonel,
Commanding 63rd Regiment.

Kinsale,
20th March 1870.

(xxix.)—ANSWERS received from BREVET-COLONEL J. W. THOMAS, C.B., commanding 67th Regiment.

III. A central school of musketry I consider now quite unnecessary. With the present instructors and an officer assistant, together with the *general knowledge* of the course of instruction that all company officers have acquired, there can be no reason why regimental training should not suffice.

IV. Yes. I think the supervision afforded by district inspectors could be equally well given by the field officers of corps.

V. I suggest that as a commanding officer has not leisure to attend at the butts, or to the details of forms, a major should, as his delegate, be the regimental musketry inspector or superintendent, whose duty it was to settle questions at the butts, be responsible that every company had the same method of exercising, to check company with the regimental musketry returns, and finally to place the latter, with the officer instructor's signature attached, before the lieutenant-colonel.

VI. I think very fairly of the system, but that it is capable of being simplified and made less irksome; the lectures are well enough; the theoretical knowledge demanded of prize men might, I believe, be modified with advantage.

VII. Vide covering letter.

VIII. I should say that the impression is that the system, if carried fairly out by every corps, is just, though in certain details that it it might be improved.

J. W. THOMAS, Colonel.

Letter accompanying Colonel Thomas' Answers.

1 Northfield, Ryde, Isle of Wight,
6th March 1870.

SIR,

I HAVE the honour herewith to return you the enclosed document filled up as requested.

Being absent from the regiment I am without references, and therefore am unable to suggest improvements of detail.

If, however, his Lordship, the Chairman of the Royal Commission, wishes me to enter more fully into the subject, on my rejoining, about the 14th instant, I shall, of course, be willing to do so.

Quite admitting the necessity of a school of musketry on the introduction of a new system, I am strongly of opinion that the time has arrived for that description of instruction, as those of education and field exercise, to be made dependent on regimental tuition.

Whatever the theory may be, a commanding officer cannot feel entirely responsible for the results of the musketry instruction while the regimental instructor is under the supervision of a district inspector, who reports his own views directly to the Inspector-General.

In the event of the central school and the district inspectorships being discontinued, some such appointment as Inspector-General, with deputies for foreign stations, would, I apprehend, be necessary (in order to ensure the same method being carried out in all regiments), because money payments are dependent upon the practice of musketry.

I have, &c.
J. W. THOMAS, Colonel,
Lieut.-Colonel commanding 67th Regiment.

The Secretary
Royal Commission on Military Education.

(xxx.)—ANSWERS received from LIEUT.-COLONEL W. S. COOPER, Commanding 70th Regiment.

III. I consider it essential that a Central School of Musketry should be maintained, and I am very decidedly of opinion that the abolition of the School at Hythe would lead to a deterioration in the shooting of the army; not perhaps very marked for a year or two, but eventually to a serious extent.

I do not think instructors, especially serjeant instructors, of anything like the stamp now existing, could be produced by a regimental system of training.

IV. I do not think the district inspectors can be abolished without detriment. I am sure they exercise a valuable control over the regimental instructors and over the system generally. The efficient supervision and periodical inspection of musketry instruction requires an amount of technical knowledge and practised observation, which seems to me to necessitate the employment of a special staff officer for the purpose.

V. I have no knowledge personally of Hythe.

VI. I entertain a very favourable opinion of the system now in force, and the soldier is under it, year by year, improving in his shooting.

A certain though not a large amount of theory it is necessary to teach the soldier. The lectures are, of course, more or less useful, according to the instructor's aptitude for conveying information in language and terms suitable to the capacity of his hearers. The lectures should be short and confined to the more necessary points of the theory of musketry, and they should be supplemented by questions and explanation at aiming drill and other convenient opportunities. I think lock instruction might well be separated from the recruits' course, it has no effect on the shooting, and would be more profitably taught at another time.

VII. I have no suggestion to offer.

VIII. My experience does not extend much beyond my own regiment. I think the officers of the infantry, as a rule, consider musketry a bore; but it is not so much the instruction itself they dislike, as that, the ranges being not generally at the place where the regiment is stationed, they are all in an unsettled state during the practice season; it is still worse when the regiment is broken up in detachments, involving constant change of quarters; there is expense as well as discomfort attending this, and particularly as regards married officers. In the actual practice I find that officers take considerable interest, and they generally share with the non-commissioned officers and men the rivalry between companies. Were it possible to have ranges adjacent to the troops, and that a regiment could be put through its course in something like from two to three months, I do not think the instruction would be unpopular with anybody; but of course this is hardly ever the case, and the annual course at some stations will last from April to August and September, keeping everybody and everything unsettled throughout the drill season.

The non-commissioned officers and men like it; the course is a change from the ordinary routine of duties and parades, and it generally involves a temporary change of quarters, which is always acceptable to the unmarried soldier. I do not find that they think the preliminary drill irksome, on the contrary, they recognise its necessity for good shooting. It may be worth while to mention that last year many of the first-class shots of the preceding year were given the option of not going through a portion of the preliminary drills; they one and all preferred to do them, *i.e.*, the aiming and position drill, believing that their shooting would be injuriously affected by the omission of them.

N.B.—In answering the above questions I have assumed that the training of the soldier, with a view to good shooting, is deemed of as high importance as when arms of precision were first placed in the hands of the army.

W. S. COOPER, Lieut.-Colonel,
Commanding 70th Regiment.

Limerick,
20th March 1870.

(xxxi.)—ANSWERS received from LIEUT.-COLONEL F. R. MEIN, C.B., Commanding 94th Regiment.

III. Not absolutely necessary, but highly desirable. Possibly thoroughly qualified instructors *might* be trained regimentally, but in most instances their efficiency would be doubtful, sufficient facilities for imparting a thorough knowledge of the system, as carried out at Hythe, not existing in a regiment.

IV. Some kind of supervision independent of the regiment is highly expedient, either by means of District Inspectors or otherwise.

V. Thorough and complete, and such as is well calculated to provide efficient Regimental Instructors, so far as I am able to judge from the qualifications of officers who have passed through the school.

VI. The system in its present modified form appears efficient, it is less irksome than formerly to the soldier, while sufficient attention is given to details to insure the principles of the instruction being properly imparted, theoretically as well as practically. I consider the lectures to be useful to

Appendix V. (A.)

School of Musketry, &c.

the recruit, as enabling him fully to understand what he has been taught at drill.

VII. I have no suggestions to offer as regards either the School of Musketry at Hythe or the system of instruction now in force, no alterations at present occurring to me as being likely to prove beneficial.

VIII. The prevailing feeling is satisfactory, officers, non-commissioned officers, and men taking considerable interest in the result of the annual course, both as regards individual performances, as well as those of their respective companies and of the regiment.

F. R. Mein, Lieut.-Col.,
Commanding 94th Regiment.

(xxxii.)—Answers received from Brevet-Colonel E. T. Gloster, commanding 97th Regiment.

III. I see no reason why an officer should not qualify himself for the post of instructor of musketry with his regiment now that the system has been thoroughly established in the service, and every regiment has several officers who have gone through the course at Hythe.

IV. I look on district inspectors as utterly useless. I am now serving in a district where there is no such officer, and we have done very well without him. His principal duty, as far as I have seen, is to check the musketry returns; this could be done at the various brigade offices.

VI. and VII. The present system as a rule is good, but there is I think too much "Theory," and not enough "Practice." The course is a regular "grind" both to officers and men. The men fire 90 rounds in eight days, and not another shot during the year. There is not sufficient platoon firing, and what is done is in too small sections. The position drills are irksome to the men. It would be better to fire a few rounds now and then during the year. The lectures ought to be simplified. The ordinary recruit cannot understand "the laws of gravity." Let him be thoroughly taught a proper position, and let it be proved to him at the range, that if he fires in that position the odds are greatly in favour of his making a good score. The "March" position drills for non-commissioned officers ought to be abolished; after all, musketry is part and parcel of a soldier's ordinary drill.

VIII. The present system is decidedly unpopular, because as I said before, the course is crammed into such a short time. Shooting, if possible, I think ought to be made an amusement. The officers are forbidden to stimulate men, by giving prizes, say, articles of kit. I would forbid money prizes being given by them. Nothing disgusts men so much as to find that after doing their best and becoming marksmen, they do not get the 30*s*. If a regiment had 300 marksmen they ought all to get the reward, now only 10 per cent. can get it. With the present (1st April 1870) reduced establishment of regiments it will be next to impossible I fear to get 40 men, a company, to fire, and the book lays down that unless a company of that strength comes to the ground, even should it be the best shooting company, the distinctive badges of cross-muskets and crown worked in gold cannot be worn by the serjeants of that company, nor will the marksmen of that company in excess of the 10 per cent. be permitted to wear the above badges. Anyone who knows anything of soldiers can foretell the result.

E. T. Gloster, Colonel,
Commanding 97th Regiment,
Dover,
25th March 1870.

(xxxiii.)—Answers received from Brevet-Colonel J. R. Glyn, C.B., commanding 2nd battalion, Rifle Brigade.

III. A system of musketry instruction having now been thoroughly established in the Army, I am quite of opinion that the Central School of Musketry might be abolished, and that officers might be trained regimentally to perform the duties of musketry instructors; commanding officers being held responsible that, while all are instructed, any officer evincing special qualification or desire to be appointed regimental instructor, should be available, in case of a vacancy occurring; the same would apply to the serjeant instructors.

IV. I think that a system of general supervision or inspection would still be necessary. The uniformity of the system must be watched, and the regimental returns would have to be checked, I conceive, outside the regiment, lest an impression should prevail that certain regiments "cook" their returns, which would destroy emulation as to holding a good place in the annual shooting report, and which it is desirable to foster.

V. I am not personally acquainted with Hythe.

VI. and VII. I think that the existing system of musketry training is certainly efficacious, and as far as the use of the rifle goes, I cannot suggest anything that appears to me to be desirable in the theoretical teaching or practice; but I do not think much of the "lectures." They should, I conceive, be more frequent, and in case of young soldiers, to a very few at a time to ensure attention.

With regard to the system of teaching *judging distance*, there appears to me much labour with small result; it is usually conducted on the same ground, or quite similar ground; it is in fact very unpractical. Practising men once or twice as laid down in the "instructions" would be of use, but more importance should be attached to instructing soldiers to judge distance in broken ground.

I think the rule that a man must be in the first class in judging distance as well as a first class shot to qualify as marksman is a mistake, although the two qualifications certainly appear requisite for a first rate rifleman; but "judging distance" is such an uncertain process, and there is much chance or luck in it; I know two officers who were first-rate judges of distance, but both so shortsighted that they could not be good riflemen. And the result sometimes happens, that a man who is a perfect master of his weapon, loses the reward of his skill, owing to some bad guesses at distance. I would have a practical test with a "dummy man" and let the first class shot fire at it from points selected by his officer.

VIII. The perpetual and monotonous "position drill" was the "bug-bear" of officers and soldiers, but the Army has been relieved from this by late instructions, and with the exception of the "judging distances," as I have represented, I do not think the present musketry course is looked upon unfavourably by officers or men.

Julius Glyn, Colonel,
Commanding 2nd battalion,
Aldershot,
18th March 1870. The Rifle Brigade.

(xxxiv.)—Answers received from Brevet-Colonel J. W. S. Smith, C.B., Commanding 1st Depôt Battalion.

III. I do consider it necessary if the present standard of training and practice is to be maintained, or improved. If the central school were abolished, I am of opinion that there is, at the present time, no other means existing to provide qualified instructors. Were it abolished, it is possible that officers might instruct themselves by book and such practice as their regiment afforded, and their qualifications be ascertained and certified by a Board of District Inspectors, and the examination papers be submitted for approval to Head Quarters; this scheme would probably provide the best substitute for the central school.

IV. I do not. I do not see how the registers, diagrams, and returns are to be kept according to regulation without them, and the public be protected in the issue of rewards, without indeed the central school, if retained, would supervise them.

The test of the efficiency of the system is the result in shooting, if the marking be reliable. The position drill is very good; the aiming and judging distance drills are also useful; and I can see no better mode of conveying the theoretical instruction to men of the educational attainments of soldiers than by lectures, which ought to be, and, I believe, are, simple and plainly delivered. I see no use in harassing the memory of a soldier with the names of the different parts of a lock, and of the pins, and with the process of dismounting and remounting his lock; skilled assistance is always at hand, and he is tempted to practise his information to the detriment of his lock.

VII. Where any striking superiority or inferiority in the shooting of a regiment, or of a part of a regiment, has occurred in the one locality, in cases where the relative condition of the regiment or part does not afford any other marked difference, I would make it the imperative duty of a District Inspector especially to ascertain, and to report, if possible, the cause. I mean in more precise terms than in a general praise or censure of the preliminary drills, the interest of the officers, &c., &c., endeavouring to arrive at the source of the result, and, where expedient, to test the *high* figure of merit by a repetition of the practice, in whole or in part, under his own eye; and to endeavour to raise the *low* figure by advice and encouragement.

If the high figure again came out, the credit would be enhanced, and it would receive universal acceptance; if it fell much short of the former figure, an explanation should be called for from the officers concerned in the former figure.

If the lower figure was much improved, blame would

ttach to the company's officers; in either case, confidence would be generally felt in the integrity of the practice and of the marking, and the relative weight to be borne by each affecting cause, whether careful training,—the interest of officers,—some parties firing in all weathers, some only in calms,—and the many other causes—would be approximately ascertained.

VIII. Since the modification of the Musketry Regulations in 1866 I believe the generally prevailing feeling of all ranks in the musketry of their battalion is one of interest and satisfaction; of course, the degree, in this duty, as in all others, depends on the character of the individual. I see no attempt at opposition, at the worst, only indifference.

J. W. S. Smith, Colonel,
Commanding 1st Depôt Battalion.

Chatham,
23d March 1870.

(xxxv.) — Answers received from Lieutenant-Colonel Lord Elcho, M.P., Commanding the London Scottish Rifle Volunteers.

III. I am in favour of the continued maintenance of the School of Musketry. Although it might perhaps be possible to provide sufficiently qualified musketry instructors, like adjutants, by a regimental system of training, I do not think it would be a wise economy to abolish the central School of Musketry. Musketry is now, and with the introduction into the service of an improved arm, will become yet more, an important branch of military instruction and training. The Hythe school has been the means of establishing and developing the present system of musketry instruction; it has given to musketry, and helps it to maintain, the high place it now holds in military training; and while it is a great central authority in all that relates to musketry, and a school for the scientific teaching of instructors, it tends, through its annual published report on the comparative shooting of the different regiments in the service, to interest the soldiers in rifle practice, and keep up a healthy rivalry among them, which is beneficial to the whole army. Were the School of Musketry abolished, I should dread lest musketry should lose its present *prestige*, and lest there should no longer be that desire to qualify themselves for the post of regimental musketry instructor which so many young officers now show.

IV. At the same time I incline to the opinion that District Inspectors of Musketry might be abolished without detriment to the efficiency of musketry instruction in the army. It would, I think, be sufficient if returns and reports from the different regiments were sent to the School of Musketry at regular stated times.

As regards questions V., VI., and VII., I have not such present knowledge of the matters to which they relate as enables me to give an opinion of any value upon them. But I would make this general remark, that while for practical shooting all that is required is to know how to aim, how to hold a rifle, and how to pull the trigger, as well as how to judge wind and distance, it is nevertheless desirable, with a view to the education of the mind of the soldier, and to interest him in his work, that musketry instructors should have a competent knowledge of the theory, science, and history of musketry and projectiles; and that they should be taught, as far as possible, to communicate this knowledge to the men of their respective regiments in a way to interest and instruct them. Such knowledge and power of imparting it can best be acquired at a central School of Musketry, such as Hythe. All that appears to me to be needed is, to see that the system of instruction is not too elaborate, and that the powers of the institution are fully utilized.

Elcho.

(xxxvi.) — Answers received from Lieutenant-Colonel Viscount Bury, M.P., commanding the Civil Service Rifle Volunteers.

III. & IV. I am of opinion that a central school of musketry and district inspectors of musketry need not both be kept up.

What is required is uniformity; this, in my opinion, might be obtained by careful supervision on the part of the district inspectors of the system of instruction pursued by regimental musketry instructors and adjutants.

If district inspectors were allowed to have from time to time small detachments from the regiments within their districts for a certain period of continuous training, the tradition of uniformity would be sufficiently maintained without keeping up the central school at Hythe. But there must always be at head-quarters a small staff, to see that the district inspectors are themselves up to the mark before they are appointed,—or else *quis custodiet custodes?*

V. The practical instruction is most valuable, so far as cleaning arms, care of arms, aiming, and shooting with ball is concerned. But theory is carried too far. Non-commissioned officers waste their time over theoretical details that are not of practical value.

One short lecture explaining why a bullet travels in a curve, and illustrating practically why a bullet goes wide if fired from a rifle with the sights not held upright, would in my opinion be enough.

The last point is after all the most important.

VI. I look upon the value of lectures delivered to soldiers by musketry instructors as *nil*, with the exception made above.

Bury.

(xxxvii.)—Answer received from Brevet-Colonel A. Lane Fox, Unattached, late Grenadier Guards.

Sir,

14th March 1870.

I should preface the remarks I have the honour of making, in reply to your letter of the 25th ultimo, by observing that it is now upwards of twelve years since I have been employed in musketry instruction, and that any experience I have in the matter was acquired during six years that I was engaged, either as instructor, or in duties connected with experiments with small arms, commencing in 1851, and including the first organization of the School of Musketry.

The following are replies to the questions numbered in the printed communication accompanying your letter:—

III. If it is decided to abolish the School of Musketry, I see no reason why it should not be possible to provide qualified musketry instructors by a regimental system of training.

IV. I think that the appointments of District Inspector of Musketry ought to be retained until a regimental system of training has been in force a year or two. The authorities will then be in a better position to decide whether or not it will be desirable to abolish them altogether.

V., VI. I am of opinion that a simple course of theoretical instruction is desirable for recruits, and that the preliminary exercises are valuable both as a means of instruction, in the first instance, and as a substitute for extra ball cartridge practice in keeping up the efficiency of the trained soldier. My experience leads me to believe that these exercises will not be disliked by the men when properly taught and judiciously administered. I have seen the ranges occupied at all hours of the day by men voluntarily exercising themselves in these practices, with a view to improve their shooting.

VII. I have always thought that more attention might be paid to the thorough training of the recruit, and that the annual course necessary for maintaining the efficiency of the trained soldier might be made less irksome to all concerned; five rounds at each distance, 90 in all, is not sufficient to enable the soldier in the first instance to ascertain the proper sighting of his rifle. To this end I would recommend that there should be two courses, long and short; the former, for recruits and for the training of battalions periodically, say, once in five years, on an average, when opportunity offers; the latter, for the annual practice of battalions.

I think that the figure of merit *of battalions* might, if necessary, be abolished without detriment to the system, eaving the figure of merit of *the company* only as a means of comparison. The figure of merit originated with myself at the time when the duty of framing the first official code of instructions was placed in my hands by Lord Hardinge and Lieutenant-Colonel Hay. I believe it has done good service in enforcing adherence to the regulations during the initiation of the system; but it has never been a perfectly fair test of efficiency, owing to the various conditions of range and climate under which regiments conduct their practice; it entails an elaborate system of superintendence, a large amount of paper work, and a rigid adherence to uniformity which is not otherwise beneficial. On the contrary, I believe that by *systematically* varying the practice in successive years, according to the opportunities afforded by the range, greater efficiency would be obtained, and a battalion would thus be better qualified to meet all the various positions in which it might be called upon to act in the field.

Firing lying upon the belly—the best means of resting the body when firing from behind walls and parapets—delivering an effective fire from behind cover of all kinds, are points of the utmost importance in the present state of war; they require practice, and ought in my opinion to form part of the training of every soldier at some period of his service.

In the event of a regimental system being introduced, I think it would be advisable that *whenever practicable* whole battalions should be struck off duty for practice at a time; this would enable the commanding officer to superintend the practice, which he cannot do when companies are detached. This arrangement would also equalize the conditions of firing in the several companies. In all camps and large garrisons where there are a number of ranges this might be done.

Greater emulation might be introduced by a better system of prizes. Average efficiency rather than crack shooting should be the object to be attained, but the latter might be promoted by encouraging matches amongst the men.

I have the honour to be,
Sir,
Your most obedient servant,
A. LANE FOX,
Colonel H. P., Unattached.

The Secretary to the Royal Commission on Military Education.

(xxxviii.)—ANSWERS received from LIEUT.-COLONEL R. J. BULLER, Grenadier Guards, late Instructor of Musketry.

III. I consider that the maintenance of *a* central school of musketry is most desirable, but that it might be placed on a different footing, to which I shall allude more fully in my answer to question VII.

I think that the regimental system of training is competent to supply efficient musketry instructors. The examination in "theoretical principles" being conducted by papers to be set by and submitted to the inspector-general of musketry.

IV. I am of opinion that the appointments of district inspectors of musketry might be abolished without detriment to the musketry instruction of the army. The returns might be transmitted through generals commanding brigades, or commanding officers of regiments, direct to the inspector-general.

Matters of detail in camps, &c. might be arranged by regimental musketry instructors taking this duty in turn.

V. On this question I write with diffidence, as considerable modifications have taken place in the method and course of instruction since I had personal experience of it.

The practical course of instruction was excellent; the use of the rifle was admirably taught; the method of *imparting* instruction was very good.

The theoretical part of the training was not satisfactory, and was almost universally disliked.

VI. The results obtained in shooting testify to the efficacy of the system of musketry training. Position and aiming drills are excellent, of the judging distance practice I cannot speak so favourably. I attach but little value to the lectures delivered by musketry instructors to the men; it was almost a waste of time; at the same time it is necessary that musketry instructors should have a competent knowledge of theoretical principles, and there are many opportunities of imparting instruction, at drills, and on the practice ground.

VII. I do not see the necessity of maintaining the school of musketry at Hythe. It has done its work. It was necessary, owing to the adoption of new arms, to inaugurate a new system of training, and in spite of prejudice and opposition an excellent system has been developed; but as I advocate strongly the continuance of a *central* school of musketry, I beg to suggest that this school should be located at *Aldershot*, and will endeavour to point out briefly the advantages of this change. A smaller staff would be required; a considerable saving in expense in transmission of troops for musketry instruction would be effected; many regiments would be able to take advantage of the school while quartered at Aldershot; this would also apply to militia.

The musketry system would become more familiar to all ranks of the army. The effect of modern infantry fire more appreciated by all arms of the service. Officers in the higher ranks would have opportunities afforded them of personally superintending experiments in musketry, changes of methods of firing, &c., rendered necessary by changes in tactics.

The vicinity of Aldershot to London, and a greater publicity given to experiments, would induce inventors to come forward more readily, and aid the development of the most efficient infantry weapon.

REGINALD J. M. BULLER,
Captain and Lieut.-Colonel,
Grenadier Guards.

(xxxix.)—ANSWERS received from LIEUT.-COLONEL E. S. BRIDGES, Grenadier Guards, late Instructor of Musketry.

III. I consider a Central School of Musketry absolutely necessary. It is not possible to provide thoroughly qualified instructors without it.

IV. I consider District Inspectors of Musketry absolutely necessary, in order that there may be perfect uniformity in the system, particularly so long as the present Prize Regulations are in force.

V. I consider the method a right one, but the course too long. I was there in 1860, and have not been there since. At that time musketry instruction was almost in its infancy. The system of teaching was well adapted to impart the required knowledge, but in many details it was irksome. We were treated more as schoolboys than officers.

VI. I consider the system, as a whole, most efficacious, particularly for recruits. The theoretical and practical instruction is, generally, well conveyed. The value of the lectures depends upon the ability of the rifle instructors; but in any case lectures are of great value to recruits.

VII. The present system of sending officers to Hythe is bad. Only officers, strongly recommended by their commanding officers as likely to become good instructors, should be allowed to go. No officer should be ordered there. This holds good with regard to non-commissioned officers.

Private soldiers should not be sent at all. They are of no use, except to do fatigues.

As the shooting of the army depends entirely on the training of recruits, too much pains cannot be taken with them. At the end of their course, those, who shoot badly, should still remain under the instructor of musketry.

I think two days preliminary would be sufficient. Bad shots should always do position and aiming drill before firing. Judging distance drill (if necessary for the drilled soldier) should be done before the practice.

I consider five rounds in volley firing enough, and that independent firing without using the back sight is useless; at any rate, the back sight should be used, and five rounds would be quite enough.

Not nearly sufficient attention is paid to skirmishing. The men take very little interest as it does not count in the average; there is no reward for a good target or punishment for a bad one.

E. S. BRIDGES, Capt. & Lt.-Col.,
3rd Bt., Gren. Guards.

Guards Club,
17th March 1870.

(xl.)—ANSWERS received from MAJOR S. FAIRTLOUGH, 22nd Regiment, late District Inspector of Musketry.

III. Instructors, both officers and serjeants, require special training to fit them for the important duties they have to perform. I therefore consider a central school of musketry absolutely necessary to provide a constant supply of duly qualified men to fill these appointments in the several regiments of infantry, militia, and volunteers.

IV. I am decidedly of opinion that the abolition of inspectors of musketry would be detrimental to the efficiency of rifle instruction in the army. Experience has proved that many errors and great irregularities in the keeping of registers, diagrams, and returns, would have passed unnoticed were it not for the periodical checking of these documents by the district inspectors. I am also aware of cases where the same supervision prevented soldiers being returned as marksmen and receiving pay as such, whose performances in no way entitled them to such a boon. To ensure thorough efficiency the districts should be very much smaller, and the visits of inspectors to corps far more frequent than at present.

V. I consider the method and course of instruction, both theoretical and practical, adopted at Hythe, simple, and calculated to meet the requirements for which the school was established; but I believe the course might be shortened, and much useless matter cut out of the "Text Book."

VI. The proceedings of each successive year afford ample evidence of the advantages to be derived from a steady perseverance in the present system of instruction, and the success of which has been fully proved by the statistics of each year's performances. I consider the lectures on theory and practice most useful, provided they are delivered with a view of interesting as well as instructing the recruit, and explaining, as they should do, clearly and concisely, the reasons for all the rules the men are called upon to perform in practice.

VII. I would suggest the expediency of requiring all officers, before proceeding to the School of Musketry, to

be thoroughly acquainted with the platoon exercise, and thus save the valuable time at present needlessly expended in imparting this instruction, and which, in my opinion, should form no part of the Hythe course.

I also consider that far more facilities should be given to enable students to acquire a thorough knowledge of the arms and ammunition used by foreign powers, and the relative merits of the several breech-loading rifles now in existence. And further, that all officers duly qualified as first-class musketry instructors should be required to go through a modified course of training at the Royal Laboratory, Woolwich.

S. Fairtlough, Major,
2nd Battalion, 22nd Regiment.

Sheffield Barracks,
26th March 1870.

(xli.)—Answers received from Brevet-Major Annesley, 97th Regiment, District Inspector of Musketry, Dublin.

III. Most undoubtedly I do; were the School of Musketry abolished, the supply of qualified officers and non-commissioned officers, as instructors of musketry to the army, could not be kept up, and the system, as laid down in the Musketry Regulations, would soon become a dead letter. I do not consider that the time has arrived when the system of musketry instruction can be considered as established in the service, and my opinion is, that it would be impossible to provide thoroughly qualified musketry instructors, by a system of regimental training. From long experience I know that, even at the present time, there are few regiments in which senior officers can be found capable of instructing and examining a subaltern for the appointment of instructor of musketry, and in time the number would grow less and less.

IV. I do not; on the contrary, I consider that supervision is absolutely necessary. One of the chief difficulties I have to contend with, as Inspector of Musketry, is to prevent captains and other company officers from departing from the system as laid down in the Musketry Regulations, both in drill and practice, and in the manner of keeping the several returns; were it not for the constant inspection of the musketry returns and supervision of the target and judging distance practices, I am convinced the public would often have to pay for rewards for good shooting that were never earned in accordance with the Musketry Regulations.

V. The theoretical and practical course of instruction at the School of Musketry at Hythe is good, but I consider the course too short to enable an officer, wishing to obtain an extra first-class certificate, to be thoroughly grounded in the various subjects required of him at the examination; by dint of hard work and cramming, he obtains a superficial knowledge that enables him to obtain the desired certificate; but that knowledge is evanescent, and I am confident that, in the majority of cases, an officer would fail to pass the same examination, say six months after having left Hythe. The knowledge requisite for a first or second class certificate can be acquired in two months, the duration of the present course, but I consider that these certificates are too freely given, or rather, I should say, too easily obtained, and that the standard of qualification ought to be raised.

VI. The system of musketry training, as laid down in the recently revised Musketry Regulations, I consider excellent, and I only regret that regimental officers, as a rule, show so little disposition to make themselves thoroughly acquainted with it. If a first-class certificate was required of a lieutenant, when passing the examination for his company, in the course of a few years, instructors of musketry might be dispensed with, as captains would be competent to train their own companies; at present too many lean entirely on the instructor of musketry. The lectures delivered to recruits are certainly valuable, for it is certain a man can seldom do a thing really well unless he understands it, and in these lectures the soldier is taught the reason for the rules he has to apply to practice.

VII. I am of opinion that three courses, each of three months' duration, at the School of Musketry, would be more to the advantage of the service than the four courses as at present constituted. That the standard of qualification for first and second class certificates should be raised.

That the present system of sending privates to the School of Musketry is expensive and unnecessary; years past it was thought of importance to form a nucleus of well-trained men in every regiment, this is no longer required; if the party sent from each regiment consisted solely of officers and *non-commissioned officers*, great benefit would accrue to the service, as every regiment would soon possess a much greater number of well-trained non-commissioned officers to drill their respective companies.

The course of musketry instruction now in force, as I said before, I consider excellent; some trifling alterations might be made, such as dispensing with the knapsack and fixed bayonet when at position drill; but with these details I will not trouble the Commission.

W. R. Annesley, Major,
Inspector of Musketry,
Dublin District.

(xlii.)—Answers received from Captain Thompson, 67th Regiment, District Inspector of Musketry, Aldershot.

III. As long as it is considered advisable that the present standard of excellence in shooting should be kept up in the army, I think the maintenance of the School of Musketry absolutely necessary, as I consider it impossible to provide properly qualified instructors by any system of regimental training. I think, however, that the utility of the establishment might be increased very greatly.

IV. So long as it is considered advisable that musketry training should be encouraged by a system of emulation, by the publication annually of the average obtained by, and the relative position of every regiment in the service, I think it necessary that the appointment of District Inspector should be continued, otherwise irregularities, such as shooting unfairly, marking incorrectly, &c., would occur, and pass unnoticed. I moreover think that the Inspector-General of Musketry and the general officers commanding divisions require the assistance of officers specially trained at the School of Musketry to superintend the general instruction, and take charge of the detail.

V. The best answer to this question is to point to the successful result of the system of instruction adopted by the School of Musketry. At the present moment the British infantry is unquestionably composed of the best military rifle shots in the world.

VI. I have great faith in the present system of theoretical instruction. The soldiers like to have the theoretical principles explained to them. I consider the practice of lecturing occasionally to soldiers might, with advantage, be extended to other subjects besides musketry. I have often thought that a skilful officer with a black-board and piece of chalk would have done more in half an hour towards explaining the principles of drill, and interesting the soldiers in their calling, than a smart Commanding Officer or Adjutant has succeeded in doing by hours of wearisome drill in the barrack square.

VII. I would leave untouched the present system of instruction of musketry, but in addition to that I consider that every officer and non-commissioned officer attending the School of Musketry should undergo a *thorough* course of instruction in Infantry sword exercise, bayonet exercise, and the principles of fortification as applied to simple *defensive* field-works, in order that in future the Regimental Instructor of Musketry may have entire charge of the *annual training* of the battalion in these exercises. Half the advantages of possessing a regiment of good shots might be lost by the officers and non-commissioned officers not knowing how to dig a rifle-pit or construct an abattis; in fact, I would propose that the Instructor of Musketry should be Assistant-Adjutant, and should be responsible to the Commanding Officer for the entire training of the regiment in musketry, bayonet and sword drill, and construction of field-works.

D. Thompson, Capt.,
67th Regiment,
Inspector of Musketry.

Aldershot,
17th March 1870.

(xliii.)—Answers received from Captain J. M. C. Drake, Instructor of Musketry, Royal Engineers.

III. School necessary.

IV. Yes.

V. Theoretical bad; practical better, but too long, and made too much of a school, therefore too disagreeable to officers.

VI. I think it successful on the whole. Judge by results. Lectures of some kind desirable.

VII. Have no Inspector-General of Musketry. Carry on all musketry correspondence with Horse Guards. Send all returns to Horse Guards. Commanding officers object to the authority of the Inspector-General, and the espionage of inspectors. If there were no one between them and the Commander-in-Chief, they would take some trouble about the matter.

Simplify regulations.

Write a short hand-book for regimental officers, and oblige them to know it.

Simplify returns.
Alter certificate on registers.
Excuse no man from drill.
At Hythe train only officers and serjeants.
Make various alterations in details of Course.
Alter the system in the Royal Engineers to suit the special circumstances of the corps.

MERVIN DRAKE, Captain,
Instructor of Musketry,
Royal Engineers.

Gravesend,
18th March 1870.

(xliv.)—ANSWERS received from CAPTAIN H. B. H. BLUNDELL, Grenadier Guards.

III. I consider the maintenance of a Central School of Musketry absolutely necessary, that experiments in everything connected with small arms may be made systematically by competent officers and recorded; without it experiments will be conducted in a desultory manner, and there will be great loss of time and money in re-testing inventions already sufficiently examined.

Although not absolutely necessary, I think it desirable that Musketry Instructors should go through a course of instruction there. Any officer attentively discharging his daily duties is imperceptibly qualifying for an adjutancy, but musketry must be specially learnt, and I think to ensure an uniform system in the army, at a central school, which should I think be at Shoeburyness, a branch of the School of Gunnery.

IV. I think District Inspectors might be abolished without any detriment to the service whatever.

V. I have not been at Hythe, and have not sufficient information upon the course there to answer this question.

VI. I think the effect of the present system (though capable of improvement in various ways) is to make a recruit a fair rifle shot in a surprisingly short time; the practical instruction is good. Few Musketry Instructors lecture well, and there is but little theoretical instruction given. The following appear to me to be the defects of the present system:—

Bad shots are only allowed to fire at short distances. Unless there is a defect in vision this seems to me a mistake.

Nearly all the shooting takes place in comparatively fair weather. Regiments aim at a high "figure of merit," to obtain which fair weather is a necessity.

All firing is deliberate. I think too much importance is attached to the "figure of merit," which after all is illusory, depending as it does on the accidents of place and weather, and indeed to some extent on the temperament of the officers who give the hits on the target, however fair they may be in intention.

VII. I think a greater number of rounds should be fired at unknown distances and by troops moved rapidly up and required to open fire at once.

Such firing should be independent of any figure of merit, so that it may be carried on in any weather. When the range is within convenient distance it should be under the officer commanding the battalion, and termed "experimental firing."

The School of Musketry should certainly be at Shoeburyness, and form part of the School of Gunnery.

Instead of a Musketry Instructor there should, I think, be in or attached to every battalion an officer styled an Officer Instructor, who had passed the Staff College as well as the six weeks Musketry course, and whose duty it would be to instruct in field fortification, surveying, and in other military subjects taught at the Staff College, as well as to act as Musketry Instructor to the battalion.

The decision to maintain the Cadet College, Sandhurst, may make it impossible to find funds for this purpose, but if that establishment does not now succeed I would suggest the propriety of abolishing it, and making all young officers join their regiments as cadets, only receiving their commissions after a year's probation, and after passing an examination in a few necessary military subjects.

HENRY BLUNDELL,
Lieutenant and Captain
Grenadier Guards.

(xlv.)—ANSWERS received from CAPTAIN the HON. H. LEGGE, Coldstream Guards, late Instructor of Musketry.

III. I do consider the continued maintenance of a central School of Musketry at the present time absolutely necessary, in order to insure accuracy and uniformity of instruction throughout the army.

I am of opinion that it would not be possible to provide thoroughly qualified musketry instructors, like adjutants, by a regimental system of training, since the special training required in order to fit an officer for the post of musketry instructor is unconnected with his ordinary daily duties, by application to which he may qualify himself for the post of adjutant.

IV. I do consider that the appointments of district inspectors of musketry could be abolished without detriment to the efficiency of the system of musketry instruction in the army; provided that the musketry instructors continue to be trained at the School of Musketry.

V. I am of opinion that the method and course of instruction, both theoretical and practical, adopted at the School of Musketry at Hythe are very good.

VI. I have no doubt that the system of musketry training at present in force in the service is of the greatest value to the army.

The mode in which the instruction, both theoretical and practical, is conveyed is very clear.

The lectures delivered by the musketry instructors are of considerable value; but I think they should be limited to explaining in the simplest possible language the course of the bullet in calm and windy weather, and the necessity of keeping the sights upright. I consider it useless to confuse the brain of the soldier with such terms as "axis of the piece," "trajectory," "force of gravity," "elastic fluid," &c.

VII. I would suggest that it is desirable to discontinue the plan of offering three kinds of certificates, the first class extra, first class, and second class, for competition at the examination at the conclusion of each course of instruction. One certificate only should be given to those officers who, at the final examination prove themselves equal to the required standard, which should be based upon an accurate knowledge of the musketry regulations, the manufacture of gunpowder, the construction of small arms, and the manufacture of cartridges.

Should an officer fail to obtain a certificate, he should not, on that account, be debarred (as at present) from again undergoing a course of instruction at the School of Musketry; but all recommendations to attend the School of Musketry a second time should be subject to the approval of the Inspector-General of Musketry, and no officer should be ordered to attend unless he is himself anxious to do so.

All soldiers should be taught to load and fire lying down, and this position should be applied to skirmishers whenever practicable.

"Independent firing" might be abolished, and 20 rounds fired in volleys in the annual course, and the same number in skirmishing practice between 600 and 200 yards.

Judging distance should not be in classes, but at unknown distances between 100 and 1,000 yards; and the points obtained should not affect a man's position as "marksman."

The money prizes for good shooting should be given to all men who obtain the requisite number of points to qualify as "marksmen," irrespective of the numbers trained in the annual course.

In addition to the annual course of training, wherever a range is available, every facility should be afforded the soldier of perfecting himself in the use of his weapon, in order that, by constant practice, he may acquire that confidence which will be so valuable to him in the hour of danger.

H. LEGGE, Lieutenant and Captain,
Coldstream Guards.

Staff College,
28th March 1870.

(xlvi.)—ANSWERS received from CAPTAIN GERARD SMITH, Instructor of Musketry, 2nd Battalion Scots Fusilier Guards.

III. I do not consider the maintenance of the School of Musketry at the *present time absolutely necessary;* but that if it was discontinued the difficulties that would be found in the way of the establishment of a regimental system of training musketry instructors would at some future period render its re-establishment necessary.

IV. I think that the appointments might be abolished with positive advantage to the service. The duties that the inspectors are called upon to perform might be thoroughly well attended to by commanding officers of regiments and battalions, assisted by the mounted officers and the regimental instructors. In some cases I think the existence of a district inspector has served only to aggravate and perpetuate the evils that his presence was intended to remove.

V. *Theoretically* the *method* of instruction at the school musketry is good; *practically* the *course* of instruction ight be shortened with advantage and without omitting ything which it is of importance to learn; officers are tained from the duty roster of their regiments far longer an is necessary to qualify them for the position of instructor.

VI. The course of musketry training as laid down for cruits is *admirable*, and I think admits of little improvelent, though perhaps of some slight modifications. With gard to drilled soldiers, the course of preliminary drill is nger than is necessary to recall to their recollections the ints they may have forgotten since the previous year's ining. The greater portion of the instruction in "Cleaning arms" is quite useless, inasmuch as the soldier is ver allowed under any pretext to remove his lock from e rifle. One at least of the practices in "Position drill" rves no useful object.

Too much time is devoted to "*individual practice*," to the eglect of those practices which on active service would ove of most value, viz., volley firing and skirmishing. ince the latter practice has been omitted in determining e "figure of merit," the men have ceased to take much terest in it.

The independent firing does more harm than good. xcept on a very windy day, the front of the section becomes clouded with smoke as to render it impossible to take ay sort of aim. In other respects than those I have entioned, the system now pursued is efficacious, in so far s it tends to make the soldier proficient in the use and anagement of the rifle.

With regard to the value of the lectures delivered by the usketry instructors, I can only say that I have very rarely nown a soldier retain for any length of time more than a ere smattering of the instruction conveyed to him in the cture room. On the whole I am inclined to think that he "Theoretical principles" of musketry might be omitted om the course of instruction without impairing the effiency of the soldier in the *practical* use of the rifle.

VII. The school of musketry should be used only for e purpose of instructing those who are *candidates* for the osts of officer or serjeant instructor. The present system f sending every year parties of officers, non-commissioned fficers, and privates to go through a long and tedious ourse of instruction, when they are not anxious to become nstructors, has tended to make the school of musketry horoughly unpopular in the service. The course of instruction might be reduced considerably in length.

The following are the suggestions I would make with eference to the system of musketry instruction now in orce:—

1. The recruits should be made to fire at the same distances as the drilled soldiers.
2. The course of "Preliminary drill" for drilled soldiers should be reduced from four days to two.
3. Omit the "2nd practice" in "Position drill."
4. Omit the instruction in "Cleaning arms," except those portions which relate to cleaning and keeping the rifle in proper order.
5. Reduce the course of "*individual practice*" from six days to four, and devote the two days thus gained to volley firing and skirmishing.
6. Abolish the "independent" practice.
7. The performances in the skirmishing practice to count in the "figure of merit."
8. Omit the instruction in the "Theoretical principles."
9. Abolish the appointments of district inspectors of musketry, and cause their duties to be performed by regimental field officers. Periodical visits (say twice a year) of the Inspector-general of musketry might be advisable under this system.
10. I strongly recommend that if possible facilities should be granted for the establishment in each military district of an annual army prize meeting, at which the reserve forces should be invited to assist.

If such a plan could be carried out it would give an impetus to rifle practice throughout the service, that it has never yet possessed.

GERARD SMITH, Lieut. and Captain,
Instructor of Musketry, 2nd Battalion,
Scots Fusilier Guards.

Infantry Barracks, Windsor,
25th March 1870.

(xlvii.)—ANSWERS received from CAPTAIN W. F. CARLETON, 60th Rifles, late Instructor of Musketry to the Rifle Depôt Battalion, Winchester.

III. No; but I am of opinion that for the present it is desirable. I think that it is possible to train musketry instructors regimentally; but that the uniformity which characterises the system now in force would soon come to an end if the central school were abolished at the present time.

IV. Yes; but it would be necessary to exact from the officers charged with the superintendence of the target practice (majors of battalions) a certificate which would ensure uniformity and absolute fairness. The majors ought to visit the men engaged at practice daily, and compare the drill and practice returns with the registers and diagrams.

V. I think that the method and course of instruction are very good, with the exception of the mode of imparting theoretical knowledge, which is not satisfactory. The lectures are learned by heart, and are soon forgotten. The lectures on the Text Book are not of much assistance to the officers who are to be examined in the voluntary subjects. I think that there should be only two classes of certificates, 1st and 2nd. A 1st-class certificate should only be given to good fluent lecturers, who might be appointed instructors. A 2nd-class certificate should be obtainable at Hythe, or by an officer who is willing to undergo a course of instruction regimentally. No officer should be promoted to the rank of captain unless he possesses a certificate.

VI. I think that the aiming and position drills have the best effect; but that the judging distance drills, as at present carried out, are of very little use. I think that the target practice is as a rule carefully and conscientiously conducted, and that the system is calculated to make good shots at known distances. I should like to see a much larger allowance of ammunition made for firing at unknown distances, (as in skirmishing) and for matches. I consider that the independent and skirmishing practices ought to be included in the figure of merit. I do not think that the present mode of determining the figure of merit is altogether satisfactory. I consider that the judging distance practices are too easy, and are not a real test of the proficiency of the soldier; but that in other respects the practical instruction is excellent. As regards the theory, the value of the lectures delivered to recruits depends altogether on the abilities of the lecturer. If amplified, and delivered in good homely language, they are useful, and the men take a considerable interest in them.

VII. I think that a smaller number of officers and non-commissioned officers should be sent to Hythe for each course, and that the forts should be occupied by detachments from the regiments stationed at Shorncliffe, who would furnish the necessary fatigue parties. By this means the course might proceed without interruption, and be completed in about five weeks. Six of these courses might take place in each year, and a smaller staff would be able to perform the duties. The regulations for the musketry instruction of the army ought to be simplified as much as possible, and embodied in the Field Exercise book. The Text Book contains a great deal of unnecessary information, and ought to be abridged. I am of opinion that a reward ought to be given to the best judge of distance in each company, and that these men should pass a final examination before their commanding officers, and on ground selected by them. I think that the rule laid down in paragraph 46, page 72, of the Musketry Regulations should be altered, and that all men who obtain the requisite number of points in the first class should be styled marksmen. It is desirable that all marksmen should be paid. If the whole number entitled to pay should prove to be too large, the qualification should be raised.

I am further of opinion that the musketry instruction of drilled soldiers ought to be carried out by the company officers under the personal superintendence of the majors of their respective wings, and that the recruits should be trained by the adjutant, assisted by a serjeant instructor in musketry. If all officers were obliged to obtain certificates before promotion to the rank of captain, it would eventually be unnecessary to maintain a central school of musketry, or to appoint officer instructors in musketry to any of Her Majesty's regiments.

W. F. CARLETON,
Captain, 60th Rifles.

Aldershot,
28th March 1870.

(xlviii.)—ANSWERS received from CAPTAIN A. S. ADAIR, Adjutant, Second Middlesex Rifle Militia.

III. I do not. I am of opinion that, like adjutants, thoroughly efficient musketry instructors might be provided by a regimental system of training.

IV. I do.

V. That theoretically and practically it seems well adapted to the instruction of musketry instructors.

VI. I think that the present system is not thoroughly efficacious, and mainly so because it fails to awaken the

APPENDIX V. (A.)

School of Musketry, &c.

complete interest of the majority of the officers and men, and is regarded by them as an annual ordeal rather than (as it should be) a most important and interesting element in their training.

With its present modifications, more especially as regards making the attendance at theoretical instruction no longer, except in cases of inefficiency, compulsory on the trained soldier, the course, theoretical and practical, in its various details, appears to me to be calculated to attain the object aimed at; and I am inclined to attribute much of the existing distaste to the great dissatisfaction engendered by the course as it existed before modification.

I think that with few exceptions the lectures delivered by the musketry instructors are valueless, and their compulsory repetition detrimental rather than advantageous.

VII. That the School of Musketry should be abolished as no longer necessary.

That the annual course should be so far modified as to admit of it being subdivided and executed by a company in portions (as far as the climate might permit) throughout the year, instead of all at once, a step which would more continuously maintain the soldier's musketry training, while it might tend to remove its irksomeness.

That periodical lectures should be given by the musketry instructors, which the trained soldier should be encouraged voluntarily to attend, and that these lectures should, if possible, be rendered more instructive than, generally speaking, they are at present.

That the men should be encouraged in every possible way to join in shooting matches between regiments, companies, individuals, &c., under judicious arrangements and with the fewest possible official restrictions. I believe that these would soon be regarded by the men as an agreeable relaxation, and that their direct usefulness in improving the shooting of a regiment would be very great as compared with that afforded by any compulsory training.

A. S. ADAIR, Captain and Adjutant,
The Barracks, Barnet, 2nd Middlesex Rifle Militia.
5th March 1870.

(xlix.)—ANSWERS received from CAPTAIN J. W. MADDEN, Adjutant, Royal Sussex Militia, late Captain Instructor of Musketry, 21st Depôt Battalion, Chichester.

III. I consider that it is necessary to have a school of musketry, but I consider it not necessary to send non-commissioned officers or privates to it.

IV. Yes.

V. I consider that the course is too long. Theory ought to be very much shorter, and I would do away with the eight lectures on manufacture of arms, manufacture of gunpowder, &c.

VI. The practice I consider good. There is too much work with registers, and pen and ink work with progress returns. Two lectures, instead of eight, I consider enough.

VII. I think that the instruction at Hythe is too long. Send officers only there, and let them, on return to their regiments, if a serjeant instructor is required, teach him his duties. There is much time lost in the keeping of so many returns as are ordered to be kept; they might very well be made more simple. I consider the practice system to be good.

J. W. MADDEN, Captain,
Adjutant, Sussex Militia.
Chichester, March 4, 1870.

(l.)—ANSWERS received from LIEUTENANT W. J. FRANKS, Instructor of Musketry, 2nd Battalion, 15th Regiment.

III. I am of the opinion that a Central School of Musketry is necessary for the following reasons:—(1.) That it is the head of a distinct department of the army; (2.) that there officers and non-commissioned officers are thoroughly and *practically* instructed in shooting and the many details of a system necessary to secure uniformity, without which the average of the shooting of the army and the fair distribution of prizes could never be arrived at; (3.) that it sustains this excellent system, through which the army has arrived at its present efficiency; (4.) that the system now in force would, without a fountain head, gradually die out, by the introduction of regimental customs; (5.) and that, in consequence, the army would gradually fall from its present high standard of shooting.

Instructors could be trained regimentally, but imperfectly as compared with the training received at Hythe. If such a course were generally adopted its great evil would be the danger of regimental customs creeping into the service, which would be ruinous to the system. But it appears possible to avoid the expense of sending officers from *foreign stations* to Hythe by having instructors regimentally trained abroad, and examined by a board composed of an inspector as "president" and two instructors as "members;" the papers having been finally examined at Hythe, certificates should be given, subject, however, to the condition that officers holding such certificates should, immediately on the return of their regiments to England, be required to qualify at Hythe for their appointments as instructors.

IV. I consider that inspectors of musketry could on no account be abolished at stations abroad, as they are most necessary for *examination of documents*, for the *support of uniformity*, and to *secure fair play*. They might possibly be dispensed with at home, but not without increasing the staff at Hythe, where all documents now examined by them should be sent for inspection. It would also be necessary, without inspectors, to have a fully qualified officer on the staff of each brigade, for the inspection of regiments engaged at ball practice, to secure uniformity and fair play.

V. The theoretical and practical instruction at Hythe is thoroughly carried out. By many it is considered too minute in what are looked upon as trifles, but by the officer, who hereafter becomes instructor of his regiment, these apparent trifles are seen to be of importance in the practical working of his department.

VI. I am convinced of the efficacy of the present system of musketry training except in the following points:—(1.) That the present mode of judging distance is of but little advantage to the soldier, and that it should, in some way, be combined with the shooting, the details of which combination could be arranged at Hythe. I would suggest that skirmishing and judging distance be amalgamated. (2.) I consider that what are termed *extra* position and judging distance drills, namely, those performed throughout the year by the men not engaged in their annual course, *are utterly useless*. Any one whose attention has been given to the subject must admit that a position drill once a week cannot have the slightest beneficial effect, but that one drill should follow another in rapid succession. Such desultory drills not only do the men no good, but also tend to make them discontented. By officers also they are considered a farce, and are calculated to make the musketry training ridiculous in their eyes. I therefore suggest that these drills be dispensed with during the year, and, as it were, all concentrated into one month before the annual course commences; that then position drill should be done every morning on parade by the 2nd and 3rd class shots. The drills would thus follow in succession, and have some effect. (3.) The rules for aiming could be condensed into two, instead of having four; the second and third rules being, in my mind, almost superfluous. (4.) The definitions of the different sorts of "sights"—full, half, and fine—ought to be put in a simpler form; at present they are unintelligible to men of the capacity of the British soldier.

Lectures by musketry instructors are delivered to recruits only, and if properly and judiciously done they are undoubtedly advantageous. I find that recruits take a marked interest in this part of their training. By questioning them in what I have described to them on the previous day they soon have the main points impressed on their minds. The lectures all point to the flight of the bullet in the air, to which I confine my instruction, and I never attempt to confuse them with figures or calculations of any sort. Instruction in the construction and cleaning of the lock and barrel is more or less a part of these lectures, and is indispensable. Lectures are not given to *trained* soldiers, but every company is catechised in theory and cleaning of arms during its annual course, with a view to keep up the knowledge they have already acquired, and, as with recruits, I never expect them to know anything of figures or calculations. On the whole I consider the lectures, as at present laid down, might be simplified. Also the term "line of fire" ought to be changed, as it is generally confounded with the term "trajectory."

VII. The suggestions I would make with reference to Hythe are as follow:—(1.) That every officer holding a 1st class certificate should be required to pass a satisfactory examination in what are called *the extra subjects*. (2.) That all officers who qualify for instructors should have memoranda forwarded to them of any mistakes in their examination papers. (3.) That the expensive practice of sending privates to the School of Musketry be discontinued, as they cannot afterwards be turned to account in musketry instruction, and are not remarkable in any way as examples to other men. (4.) That the "*Wimbledon lying position*" be adopted at Hythe, and clear and distinct instructions be given as to how men are to lie. I never ventured to instruct my men in the lying position until I learned it by accident from a Wimbledon man. At present the instructions for the lying position are quite insufficient.

With reference to the present system of musketry instruction, as far as my experience goes, it is popular with the men, but most unpopular with officers. To correct this dislike to musketry on the part of the officers I have the following suggestions to make:—(1.) That the present system of *fining* officers for mistakes, such as omissions of signatures, &c., should be at once discontinued. It is apparently a hardship that officers should be deprived of their *scanty* pay for omissions which are frequently the fault of non-commissioned officers. The high state of discipline in their various duties, for which the officers of our army are remarkable, has not been attained by depriving them of pay for unintentional omissions in their official documents, or any other trifling neglect of duty, but by holding them responsible for the result if brought to a court-martial, or by being visited with the severe reprimand and displeasure of their senior officers. The same, I hold, should also be a rule in their musketry duties. I will go further, in saying that all such fines for trifling matters should be refunded to officers from whom they have been taken, as such a course is manifestly opposed to the principles of discipline in our army. (2.) That the attendance of company's officers at the drill and ball practice should be optional, and not compulsory. The musketry instructor or his assistant must always be present, and the registers, &c., could be signed by them in the absence of a company's officer. I am aware that it is the generally received opinion that men shoot better in the presence of their captains, but so many inducements are held out to them to do well, my opinion is that they would do equally well in their absence. I have no doubt that all zealous officers would voluntarily attend, but being compelled to be present, with little or nothing to do, is most irksome, and makes musketry unpopular with them. (3.) Every one must admit that a musketry instructor and his serjeant ought to be good shots, as examples to the men; but not a *single round* of ammunition is allowed them for practice. It is evident that the fact of *paying for every shot* prevents practice on their part, and, in consequence, they are often inferior shots. I would therefore suggest that every instructor be allowed 120 rounds, and every serjeant instructor 60 rounds yearly, for practice.

W. J. Franks, Lieut.,
Instructor of Musketry,
11th May 1870. 2nd Battalion, 15th Regiment.

(li.)—Answers received from Lieutenant A. R. Hutchinson, Instructor of Musketry, 1st Battalion 23rd Royal Welsh Fusiliers.

III. I consider the continued maintenance of a Central School of Musketry at the present time absolutely necessary, and am of opinion that neither thoroughly qualified musketry instructors could be provided, nor a uniform system of proper instruction maintained, by a regimental system of training.

IV. The appointment of district inspectors of musketry could not be abolished without detriment to the system of musketry instruction in the army, as their supervision is necessary to ensure uniformity and prevent irregularities.

V. I am of opinion that the method and course of instruction, both theoretical and practical, as adopted at Hythe are excellent, and in every way suited to the requirements of the service.

VI. I consider that the system of musketry training at present in force in the service is as efficient as can be desired, for along with giving every man some knowledge of the theory of musketry, and also inculcating habits of thought and observation, it also provides for this knowledge being perfected and maintained.

Without lectures from the musketry instructors to the the men on the theory of musketry, it is quite impossible to explain to them the reasons for many rules which should be attended to in practice, and without a knowledge of which their instruction would be very incomplete.

VII. As I consider the system of musketry instruction, both at Hythe and generally throughout the army, to answer in every way to the requirements of the service, I cannot offer any suggestions which would be desirable.

A. R. Hutchinson, Lieut.,
Instructor of Musketry, 1st Battalion Royal Welsh Fusiliers.

(lii.)—Answers received from Lieutenant G. M. Douglas, Instructor of Musketry, 33rd Regiment.

III. (1.) There can be but one opinion, viz., that the School of Musketry at Hythe, *as at present constituted, is nearly useless.*

(2.) I consider it quite possible to produce instructors by regimental training.

IV. I am positive that the abolition of the appointment of district inspectors would not be detrimental to the working of "Instruction in Musketry."

V. As an abstract fact the theoretical method at Hythe is bad, the practical good.

VI. (1.) I consider it to be good.

(2.) As a general rule satisfactory, though much depends on individuals.

(3.) The lectures are time thrown away.

VII. (1.) In my opinion an institution of this kind ought to meet the following requirements, viz.:—

1st. It ought to instruct its students in mechanics and the mechanism of every machine employed in the construction of small arms or projectiles.

2nd. It should also instruct in the composition of the different preparations of iron, of all propelling media, and projectiles.

3rd. Students should be selected as being most capable of imparting instruction both on the drill ground and on the rifle range, or in plain words, an officer ought not to be allowed to become an instructor who cannot make the most of his men.

4th. There ought to be an entrance examination treating on the laws governing the flight of projectiles.

5th. All reports should be sent *directly* to the Central School from the different corps.

6th. It ought to publish for the information of the army a quarterly report on the progress of rifle instruction in the army, with the account of all recent inventions in small arms and projectiles; with also communicated papers.

7th. It should be situated at the central small arms factory.

(2.) 1st. Abolish all position drills except during the annual course.

2nd. Encourage as much as possible private matches.

3rd. For the sake of greater emulation, allow *two* companies of the same corps to practise side by side on the same range.

4th. Do away with, as regards the private soldier, all attempts at compulsory theoretical instruction.

5th. Render qualification to some extent necessary in the theory of musketry before becoming a non-commissioned officer.

George M. Douglas, Lieutenant,
and Instructor of Musketry,
Aldershot, 33rd "D. W." Regiment.
26th March 1870.

(liii.)—Answers received from Lieutenant A. M. Creagh, Instructor of Musketry, 42nd Royal Highlanders.

III. I consider that a school of musketry is very necessary, and that it would be very difficult to get a thoroughly qualified musketry instructor from a regiment without a previous training at a school. I think that the training received at a musketry school is calculated to establish a system of uniformity in the method of carrying on the musketry instruction of a regiment, which, I fear, would be departed from if the officer had not previously received some training. It happened in my own regiment in India in 1857, when the system of musketry was first established, an officer took up the appointment who had not been to a school of musketry; the difficulties, he tells me, he had to contend with were very great indeed, not only in the method of carrying on the instruction, and in delivering lectures, but more especially in the making out of returns, &c. &c.

The facilities, and the inducement held out to officers to acquire a thorough knowledge of the theory of musketry by a regimental system of training, would be so limited, and the time it would take to acquire that knowledge would be so great, that I fear very few officers would be inclined to study; and the standard of efficiency in the theoretical part would become much lower than what it is now.

The practical part of the work might be learnt by a regimental system of training, but I am still inclined to think that after a time there would be a want of uniformity, for the reason that the knowledge gained by the instructor is regimental, and instead of there being one uniform system of conducting the instruction throughout the army, it would gradually become a system peculiar to each regiment.

IV. I consider the appointment of a district inspector absolutely necessary, for without him, the several details of the Musketry Regulations would not be carried out strictly, and a certain laxity in the method of carrying on the annual course would inevitably creep into regiments.

APPENDIX V. (A.)

School of Musketry, &c.

I would beg to draw the attention of the Commission to the monthly reports of district inspectors, wherein I have no doubt it will be found in many cases that the attention of the general officer has been called to certain discrepancies which are contrary to the spirit of the Musketry Regulations, but which only show that if it is possible for them to occur with a district inspector especially appointed for the purpose of checking these faults, what would it be if these faults were left to run on unchecked? I am confident that not only would the present Musketry Regulations be infringed upon by instructors and commanding officers putting their own construction on the different rules, but that the "figure of merit" of regiments would be at variance with their shooting in general.

V. With regard to the method and course of instruction adopted at Hythe, I am of opinion that it is too theoretical and not sufficiently practical.

The annual returns, &c. &c. of regiments received at Hythe should be circulated among the officers, and they should be allowed to examine them, so that if called upon they might be able to make them out themselves; again, now that breech-loaders are in use, the instructor should not only know the different parts of the breech arrangement, the modes of stripping and collecting the action, but he should be thoroughly conversed with the mechanism of the arrangement, and also of the ammunition; for this purpose every officer holding a first-class certificate should be sent to Enfield and Woolwich to complete the course of instruction received at Hythe.

VI. The modified course of instruction in musketry at present in force is, I think, sufficient for the maintenance of a good standard of efficiency; the theoretical instruction is simple and not beyond the understanding of the ordinary run of recruits; a great deal, however, depends on the simplicity of the lectures and the manner in which they are delivered. I am of opinion that lectures on the advanced subjects of musketry would be looked upon by the men as interesting, and I am certain it would be a means of inducing them to take a greater interest in the practical part of the instruction, which would in a great measure increase the rivalry between companies.

From my experience as a musketry instructor I have found that the object to be gained is to endeavour to get the men to believe in the whole system of musketry instruction, more particularly in position drill, which I consider, with the limited allowance of ammunition used yearly, to be the most essential part of the instruction; in fact, the annual course should be conducted not as if the men were performing a duty, but more as if they were entering on a rifle competition, when not only is the credit of each company to be upheld, but that of the whole regiment.

VII. I have already given my opinion with regard to the School of Musketry in answer to qurestion V. With reference to the system of musketry instuction now in force, I would beg to suggest—

Though sixty rounds a man may be sufficient to keep up his efficiency in individual firing, I am of opinion that ten rounds in volley and ten in independent firing is not sufficient. From the experience gained in the late continental wars where the breech-loading rifle was used, it appears that these two modes of firing will in future be more extensively employed, it is therefore necessary that a higher standard of skill should be obtained in these two practices; for this reason, besides the present ten rounds fired by sections at least ten or twenty more should be fired by the whole company together, either during the annual course or at any other time. The skirmishing practice depends so much on the skill attained in individual firing that the ten rounds appear to be sufficient.

Match shooting at other times than when the annual course is proceeding should be encouraged by generals and commanding officers of regiments; for this purpose a supply of ammunition should be granted to each regiment; these matches to be conducted in such a way that the whole rank and file may derive some benefit from them.

The flatness of the trajectory of the present rifle being sufficient for all practicable purposes to a distance of nearly 300 yards, it appears almost a waste of time to practise judging distance at shorter distances; the knowledge of distances which under ordinary circumstances would be most useful to the soldier, and which would be more generally required in skirmishing, lies between 300 and 800 yards. I am therefore of opinion that the judging distance practice should be restricted as much as possible to these distances.

A. M. CREAGH, Lieut.,
Instructor of Musketry,
42nd Royal Highland Regiment.

Aldershot,
28th March 1870.

(liv.)—ANSWERS received from LIEUTENANT G. W. WOOD, Instructor of Musketry, 56th Regiment.

III. I do not think it would be for the good of the service to abolish the School of Musketry at Hythe. An officer might no doubt learn his duties as Instructor of musketry regimentally, but I should consider one trained at Hythe a far better Instructor. Many officers who do not believe in the advantage of musketry training return their regiments, after a course at Hythe, with a firm belief in the efficacy of the present system as taught there.

IV. I think Inspectors of Musketry are absolutely necessary. Without a Central School of Musketry, and without Inspectors, regiments would each very soon adopt a system of its own, and there would be neither uniformity or fairness.

V. I consider the method of instruction both theoretical and practical on the whole very good.

VI. The increased figure of merit of the several regiments goes far to prove the efficacy of the present system of musketry training, which has also (since it was modified in 1867) become much more popular with both officers and men. A slight knowledge of the theoretical principles of musketry is no doubt beneficial to young soldiers, inasmuch as it teaches them the reason "why" they are taught to do this and that; otherwise I do not think lectures are much good.

VII. None but non-commissioned officers (officers of course excepted) should be sent to the school of musketry at Hythe. The good shooting of a company mainly depends on the way it is drilled by its non-commissioned officers, and there are very few non-commissioned officers who, unless they have been to Hythe, know how to drill their men, and at the same time induce them to take an interest in their work. I would discontinue the use of the knapsack at position drill, and in shooting in the 1st period reduce the number of points required to pass from the 3rd into the 2nd class from 36 to 30, as many a man is a very fair shot on the knee, who cannot shoot standing.

GEORGE W. WOOD, Lieutenant,
Instructor of Musketry,
56th Regiment.

(lv.)—ANSWERS received from LIEUTENANT C. J. WYNDHAM, Instructor of Musketry, 83rd Regiment.

III. I do not consider a central school of musketry necessary.

Thoroughly qualified instructors of musketry might well be provided by a regimental system of training. Their qualification for such might be proved by a garrison board; those wishing to qualify for district inspectors of musketry to be further examined.

IV. The abolition of district inspectors of musketry would be detrimental to the efficiency of musketry instruction, inasmuch as the inspector exercises a strict and impartial supervision over all drills and practices. All returns are sent through him, and in cases of difficulty he can be referred to. He is also by his constant presence a guarantee for the prevention of unfair practices in the system of marking, &c., being resorted to by corps during the annual course.

V. The method is indifferent and the course is tedious.

VI. As a rule the training is good, especially the practical part, if properly carried out.

In the theoretical instruction much might be omitted, as for instance, those lectures relative to the composition of the air, the force of gravity, &c. In my opinion it is only necessary to teach a soldier the parts of his rifle, how to clean it and keep it in a serviceable state, the use of the sights and method of aligning them on an object.

The value of the lectures is but small; a soldier learns twice as much in one hour by practical illustration on the practice ground as in two days in the lecture room.

VII. I would beg to suggest that the course of instruction at the School of Musketry be shortened, as much time and patience are occupied if not wasted in the minutiæ which are next to useless, in learning word for word the whole of the position drills and platoon exercises.

Relative to the musketry instruction now in force I beg to suggest that the knapsack be discarded during position drills; a soldier would then be trained in the order in which he parades for target practice, and I consider that it would in no way interfere with the efficiency of the platoon firing.

Position drills should not exceed 20 minutes at frequent intervals.

It is most essential that all men who qualify as marksmen should receive the marksmen's prize. Good shooting

prizes should be issued as soon after the completion of the annual course as it is possible to do so.

A soldier should be allowed to fire in any position whatever after 400 yards, as it would ensure a greater accuracy of shooting.

Prizes should be awarded for the best target of each company, both in skirmishing and independent firing without the use of the backsight; the averages, however, of the two practices not to count towards the battalion figure of merit.

Clubs should be formed in each regiment and the men encouraged to shoot matches, as no doubt great benefit accrues therefrom, and every inducement offered to lead the men to take an interest in the annual course and their rifles.

CHARLES J. WYNDHAM, Lieutenant,
Instructor of Musketry, 83rd Regiment.

Poonah,
6th May 1870.

(lvi.)—ANSWERS received from LIEUTENANT W. GATEY, Instructor of Musketry, 100th Regiment.

III. As far as I can judge, although it might be possible to discontinue a central school of musketry, such a proceeding would be attended by many disadvantages; and as a rule musketry instructors trained regimentally would not be so thoroughly efficient or so qualified to carry on their duties, and would consequently be too apt to trust almost entirely to the serjeant instructors.

IV. District inspectors of musketry could not be abolished without detriment to the instruction of musketry in the army, as they act in a great measure as a check upon irregularities which might otherwise take place on the practice ground as well as in the returns, and tend to keep the system more uniform throughout the service, and to them all disputed or undecided questions can be referred.

V. The course of instruction at Hythe is as complete as the short time allowed for each course can admit of; but the method of hurrying through so much book work in a limited space of time is calculated to reduce that portion of the instruction to a species of "cramming."

VI. The present system of musketry training is as simple and complete as it can be made, to be of real use to the soldier, and it would be difficult to improve much upon the mode in which the theoretical and practical instruction is conveyed.

The lectures delivered by the musketry instructors cause the recruits to be interested in the subject, and to pay greater attention to their preliminary drills and to musketry in general.

VII. I consider that the extra and voluntary portion of the instruction should comprise a course of lectures and experiments on the latest inventions in fire-arms, either instead of or in addition to the history of small arms at present in use in the school of musketry, and the general construction of the rifles, &c. with which the European powers are armed.

W. GATEY, Lieutenant,
100th Regiment.

(lvii.)—ANSWERS received from ENSIGN J. J. PRESTON, Instructor of Musketry, 4th Battalion Rifle Brigade.

III. Though the system of musketry instruction has now been established in the service, still I consider that the continued maintenance of a central school of musketry is absolutely necessary in order to train officers for the position of musketry instructors. The course of instruction for officers at Hythe chiefly consists in their being taught to follow out implicitly what is laid down in the "Instruction of Musketry;" yet even for this a school of musketry is necessary. An officer, no matter how zealous, cannot get up the subject of musketry instruction, while doing duty with his regiment, in the same manner he can at a school of musketry, where, for the short time he is there, having nothing else to direct his attention to, he is able to master it thoroughly. Some men might certainly be able to perform in an efficient manner the duties of musketry instructor, without having been through a course of instruction at a school of musketry; but I think that as a rule it would be impossible to provide thoroughly qualified musketry instructors without such a school.

IV. I do not think that the efficiency of the system of musketry instruction in the army can in any way be affected by abolishing the appointments of district inspectors of musketry, for all their duties in a regiment could, I think, easily be performed by the field officers of wings. One part of the duty, I believe, of district inspectors of musketry is to see that no unfair practices go on in a regiment, and as unfair practices have been detected in certain regiments, it would seem that for this the appointments of district inspectors of musketry are necessary; however, I do not for a moment believe that such practices would increase were the above appointments abolished, when one considers that it is a man's honour that is involved.

V. I do not think that the method adopted at Hythe for the practical instruction, and that part of the theoretical instruction comprised in the "Instruction of Musketry," could be much improved. In the fourth lesson on theoretical principles in the "Instruction of Musketry," that part which illustrates the motion of an imperfectly formed bullet by means of a bent arrow, might I think be left out with advantage, for it by no means gives a true idea of the motion of a bullet under the circumstances, but I think rather tends to make one form very erroneous notions. In the first lesson, paragraph 6, allusion is made to the fact that three forces constantly act on a bullet in its passage through the air, which of course is erroneous, for there are clearly only two forces acting on a bullet, besides the velocity which has been imparted to it by the explosion of the gunpowder; it may, perhaps, be of little importance whether a soldier clearly understands the difference between a force and a velocity, but, nevertheless, this is an error, and should I think be corrected. As regards that part of the theoretical instruction at Hythe which officers have to go through in order to obtain a "first-class extra" certificate, the sooner, I think, that it is done away with in its present form the better. It does not in any way follow that an officer who has obtained a first-class extra certificate should be more qualified to impart the instruction of musketry than one who has only obtained a first-class certificate. In this extra part of the theoretical instruction a fair knowledge of three subjects, viz.: "theory of the motion of projec-" tiles," "the history of small arms," and the "history, "manufacture, and explosive force of gunpowder," is supposed to be acquired; but really the knowledge acquired, especially of the first-named subject, is very limited indeed, for in the time that one has to devote to these subjects at Hythe very little can be done. Lectures on these subjects are delivered during about six weeks of the course by the chief instructor, but in my humble opinion they are not calculated to throw any more light on the subjects than can be obtained by a careful reading of the "Text Book." If, on the other hand, an officer simply confines himself to the study of those paragraphs which are marked out for him, he can at the best but obtain a very imperfect knowledge of either of these subjects. No officer is allowed to compete in the examination for an extra certificate who has not regularly attended the chief instructor's lectures; he might, however, if permitted, do so with success. This fact, I think, proves the small value of these lectures. In short, as regards this extra theoretical instruction, I consider that it is but a cram, which cannot possibly prove of use to any one, since the knowledge obtained is so very imperfect.

VI. Considering the great improvement which has taken place in the shooting of the army generally during the last few years, I do not think that much fault can be found with the system of musketry training now in force in the service. When one sees the way in which recruits, many of whom have perhaps never before handled a rifle or gun, are able to shoot after eight days' musketry training, I do not think that the method in which the practical instruction is conveyed can be called into question. I do not think that the value of the lectures delivered by the musketry instructor is very great; simple as are the principles enunciated and explained in these lectures, I have hitherto found but few recruits who seemed able to understand them. Most non-commissioned officers, however, and many trained soldiers profit by them and gain a certain knowledge of the simple laws referring to the path of the bullet, &c., &c., and so become good intelligent shots.

VII. I believe that some officers go down to Hythe without any idea of employing their time profitably while there, and come away having obtained either a second-class certificate, or perhaps none at all. Such men ought, I think, if possible, to be kept away from a school of musketry, such as Hythe, for they not only learn nothing themselves, but are often a source of annoyance to others, who wish to make the best use of their time. I would suggest that in all cases where an officer failed to obtain a first-class certificate, his travelling expenses to and from Hythe should not be allowed; this plan, I think, might keep away from Hythe men who under the present system are always more or less troublesome. As regards the system of musketry instruction now in force, I do not think that any alterations are necessary.

J. J. PRESTON, Ensign,
Instructor of Musketry,
4th Battalion Rifle Brigade.

Appendix V. (B.)

School of Musketry, &c.

B.—Tabular Summary of the Answers to Questions on the

Name of Witness.	Appointment.	Is a Central School of Musketry necessary?	Could Musketry Instructors be trained regimentally?	Could District Inspectors be abolished?	Opinion as to the course of instruction at Hythe.
Col. Haliday	Commandant of the School and Inspector-General of Musketry.	Yes	-	No	Well adapted to its object.
Gen. Lord Strathnairn, G.C.B.	Commander of the Forces in Ireland.	Yes	Not adequately	Their abolition unadvisable.	-
Lieut.-Gen. Sir J. Scarlett, G.C.B.	Commanding Aldershot Division.	Not absolutely necessary on its present footing.	Not entirely, without examination as to their competency.	Four inspectors only required.	Somewhat too theoretical and abstruse; practically good.
Lieut.-Gen. Sir G. Buller, G.C.B.	Commanding South-Western District.	A regimental system of training would be the best principle to adopt.	Yes	Inspectors apparently necessary, owing to the system of money rewards.	Seems valuable in its results.
Lieut.-Gen. Lord W. Paulet, K.C.B.	Adjutant-General to the Forces.	Yes	-	No	-
Maj.-Gen. Sir A. Cunynghame, K.C.B.	Commanding Northern Division of Ireland.	Desirable	-	Yes	-
Maj.-Gen. Sir J. Garvock, K.C.B.	Commanding Northern District.	Yes	-	No	-
Maj.-Gen. Sir C. Staveley, K.C.B.	Commanding Western District.	Yes	A regimental system could not be depended on.	No	-
Maj.-Gen. Russell, C.B.	Commanding South-Eastern District.	Yes	-	No	-
Maj.-Gen. Freeman Murray.	Commanding Chatham District.	Yes	Not nearly so adequately as under the present system.	No; but the appointment should be limited to three years.	-
Maj.-Gen. Farren, C.B.	Commanding at Colchester.	Yes; its abolition would be a misfortune to the public service.	Not so well qualified as at present.	Yes, with an arrangement for the annual inspection of each regiment by a competent officer.	-
Maj.-Gen. Rumley	Commanding in North Britain.	Yes	It would be almost impossible to furnish competent instructors by such a system.	No	-
Maj.-Gen. Campbell, C.B.	Commanding South-Western District of Ireland.	Yes	A regimental system would not work well.	No	-
Maj.-Gen. Borton, C.B.	Commanding Curragh District.	Yes	No	No	-
Col. Armstrong, C.B.	Deputy - Adjutant-General, Ireland.	Yes	No	No	-
Col. Shute, C.B.	Commanding 4th Dragoon Guards.	Yes	No	Not desirable at present, unless a district staff officer could undertake some of the duties.	Good. It turns out good instructors.
Col. Baker	Commanding 10th Hussars.	Yes	-	No	-

ect of the SCHOOL of MUSKETRY, &c.

Opinion as to the acy of the system of lusketry training.	Value of lectures given by Musketry Instructors.	Feeling of officers and soldiers in regard to the system of Musketry Instruction.	Main suggestions in regard to	
			The School at Hythe.	Annual course of Musketry.
adapted to its object -	They explain the reasons for the rules taught in practice.	- - - -	No suggestions to make -	No suggestions to make.
ssary for the proper of the weapon.	- - - -	- - - -	- - - -	More practice required in shooting at short ranges, and in judging distance in inequalities of ground. Musketry instruction prejudicial to the *morale* of cavalry.
ient, but a little over- e in the case of old diers.	Explanation on the ground of more use; still lectures not to be discouraged for young soldiers.	- - - -	Unite it with a central school, presided over by a scientific officer, where the science of projectiles might be taught, and inventions tried and recorded.	Excuse old soldiers from lectures and theoretical instruction; give them aiming drill and position drill together.
ketry practice of the my very good.	Useful to recruits - -	- - - -	- - - -	The instructor of musketry not occupied for more than seven months in the year.
y valuable - -	- - - -	- - - -	No suggestions to make -	No suggestions to make.
acious, and very supe- r to that of foreign nies, but capable of rther improvement.	- - - -	- - - -	The Central School should be a school of scientific instruction and experiment; its officers selected for their scientific acquaintance with firearms.	More practice ammunition required.
ellent and effectual -	- - - -	- - - -	No suggestions to make -	The junior major in each regiment to be made specially responsible for the returns and instruction.
efficient; perhaps not ite so practical as it ould be.	Valuable - -	- - - -	- - - -	Combine the duties of instructor of musketry and instructor of gymnastics.
neral system good -	Unsuited to the capacity of most private soldiers.	- - - -	Discontinue sending privates to the school.	Improve the present system of prizes for shooting; free the soldier from everything irksome and unnecessary.
cellent - - -	Useful, but might be simplified, and certain lessons be omitted.	As a rule they evince considerable interest in the annual course.	- - - -	Should be more conducted by company officers. A system of marking which would inspire greater confidence should be introduced.
orks satisfactorily -	Necessary to enable the recruit to understand the construction of the rifle, and the principles of firing; but latitude should be allowed the instructor in his explanations of the lectures laid down in the book of regulations.	- - - -	- - - -	The monthly progress return should be further simplified.
cellent - - -	- - - -	It meets with passive opposition, or indifference, on the part of commanding officers, and with little active support from officers generally.	Remove the school to Aldershot.	The junior major to be responsible for the musketry instruction of the regiment, with an assistant to train recruits, and the captains to train their companies. Abolition of competition between regiments suggested.
cellent - - -	- - - -	- - - -	No suggestions to make -	No suggestions to make.
ctical instruction all at could be desired.	Their value doubtful; to most men a source of weariness rather than benefit.	- - - -	No suggestions to make -	No suggestions to make.
cellent, both practically nd theoretically.	Much depends on the instructor; a good lecturer as a rule is listened to with interest and attention.	- - - -	- - - -	Greater attention to instruction of recruits, and to judging distance practice; special training in more advanced skirmishing drill.
swers well - -	Depends on the lecturer -	They take great interest in it.	- - - -	Increased allowance of practice ammunition.
neral system good -	- - - -	Not popular in the cavalry	- - - -	Increased allowance of practice ammunition. A serjeant instructor required in cavalry regiments.

APPENDIX V. (B.)

School of Musketry, &c.

Tabular Summary of the Answers to Questions on the

Name of Witness.	Appointment.	Is a Central School of Musketry necessary?	Could Musketry Instructors be trained regimentally?	Could District Inspectors be abolished?	Opinion as to the course of instruction at Hythe.
Col. Jenyns, C.B.	Commanding 13th Hussars.	Yes	No	Yes, they are quite unnecessary.	
Col. Stephenson, C.B.	Commanding Scots Fusilier Guards.	Yes	No	No	
Col. Knox, C.B.	Commanding 2nd Battalion, 9th Regiment.	No	Yes	Yes	Irksome and unpleasant to officers and men.
Col. Peacocke	Commanding 1st Battalion, 16th Regiment.	Advisable to retain it	Yes; but progress and uniformity of system would be sacrificed.	No	
Col. Harding, C.B.	Commanding 1st Battalion, 22nd Regiment.	No	Yes	Yes	
Col. Anderson	Commanding 2nd Battalion, 22nd Regiment.	Yes	Not so as to ensure complete uniformity of system.	Yes, at home, except at Aldershot and the Curragh.	
Col. Lowry	Commanding 47th Regiment.	Most desirable	Doubtful	The office is useful to keep a check on regiments.	Too much stress is said to be laid on theoretical lectures being delivered *verbatim* from the book.
Col. Weare, C.B.	Commanding 50th Regiment.	Yes		Yes, if the regimental instructor was held more responsible.	
Lieut.-Col. Thomson	Commanding 54th Regiment.	Yes	Possible, but not so effectually as by the present system.	No	
Col. Hawley	Commanding 4th Battalion, 60th Rifles.	No	Yes	Yes, they have never been of great use. The inspection to be placed under the Adjutant-General's department.	
Lieut.-Col. Bowles	Commanding 63rd Regiment.	No	Yes, with examination before a board.	No	
Col. Thomas, C.B.	Commanding 67th Regiment.	No	Yes	Yes. The supervision could be equally well given by field officers of corps.	
Lieut.-Col. Cooper	Commanding 70th Regiment.	Yes	No, not of the present stamp.	No	
Lieut.-Col. Mein, C.B.	Commanding 94th Regiment.	Not absolutely necessary, but highly desirable.	Possibly, but their efficiency would be doubtful.	Some kind of independent supervision expedient.	Well calculated to provide efficient instructors, as judged by its results.
Col. Gloster	Commanding 97th Regiment.	No	Yes	Yes; they are utterly useless.	
Col. Glyn, C.B.	Commanding 2nd Battalion, Rifle Brigade.	No	Yes	Some system of general supervision necessary.	

of the School of Musketry, &c.—*continued.*

ion as to the of the system of ry training.	Value of lectures given by Musketry Instructors.	Feeling of officers and soldiers in regard to the system of Musketry Instruction.	Main suggestions in regard to	
			The School at Hythe.	Annual course of Musketry.
l in every branch	- - - -	Entails very hard work in cavalry, but a great many men take an interest in ball-firing.	A modified course to be compulsory on all officers on obtaining their lieutenancy.	A serjeant instructor necessary in the cavalry. The officer employed as instructor to be more adequately paid. Preliminary drill to be curtailed, and ball-firing increased.
- - -	Not of much value, except to recruits.	They take great interest in the annual competition.	- - - -	Discontinuance of some of the winter parades, and diminution of returns.
- - -	- - - -	All ranks feel great interest in it.	- - - -	No suggestions.
and good -	Depends much on the instructors.	They generally take pleasure in it.	- - - -	More independent firing, and skirmishing at unknown distances; firing at moving objects; practise in judging distance on broken ground.
ary drill good; ot extended over t time.	Generally listened to with impatience.	They are anxious to hurry through the practice.	- - - -	The firing should be extended over a greater number of days.
portion good; efit the men de- m the theoretical tion varies.	Depends on the power of the lecturer.	- - - -	Extension of the objects of the school, and of the instruction conveyed at it, to all subjects connected with improvements in fire-arms, &c., at home and abroad.	No suggestions.
tly improved the g of the Army.	Useful, but should be simple, attractive, and adapted to the capacity of all.	- - - -	- - - -	Returns might be simplified, and go direct from regiments to the Inspector-General. More ball-firing annually, and at unknown distances. Rapid independent firing a mistake.
modification re-	- - - -	The feeling of the non-commissioned officers and men favourable; that of the officers less so.	- - - -	More ball practice, especially for skirmishing.
whole very good -	Can be made of great value	Favourable to the annual course, in which great interest is taken; but position drill in winter is thought very irksome.	- - - -	Discontinuance of position drill in winter; reduction of points for passing out of the 3rd class; improvement in judging distance practice.
- - -	- - - -	Popular with all ranks -	- - - -	Amalgamation of duties of Musketry Instructor and Adjutant, two officers being appointed for the combined duties. Amendment of the method of arriving at the "Figure of Merit." Increased allowance of ball ammunition.
fficient - -	They induce the recruit to take interest in the instruction.	They consider it very good	- - - -	Companies might go through the annual course in shorter time.
air - - -	Satisfactory - -	It is considered just if fairly carried out, but capable of improvement in details.	- - - -	The superintendence of the regimental instruction to rest with the major. The system might be simplified and made less irksome.
favourable - -	Depends on the lecturer's aptitude.	The non-commissioned officers and men like it; officers as a rule think it a bore, though they take considerable interest in the actual practice.	- - - -	No suggestions to make.
pears efficient and is irksome than for- ly.	Useful to the recruit -	Satisfactory; all take considerable interest in it.	No suggestions to make -	No suggestions to make.
; but has too much ry and not enough tice.	Too abstruse for the ordinary recruit; they should be simplified.	The system decidedly unpopular.	- - - -	The course should generally be made less irksome, and be more distributed over the year. Musketry to be part and parcel of ordinary drill. Rewards to marksmen to be increased.
cious - - -	Not of much value -	The feeling now not unfavourable.	- - - -	Improvement in judging distance practice, especially on broken ground. First class in judging distance not to be a necessary qualification of a marksman.

APPENDIX V. (B.)

School of Musketry, &c.

Tabular Summary of the Answers to Questions on

Name of Witness.	Appointment.	Is a Central School of Musketry necessary?	Could Musketry Instructors be trained regimentally?	Could District Inspectors be abolished?	Opinion as to course of instruc at Hythe.
COL. SMITH, C.B.	Commanding 1st Depot Battalion	Yes	Possibly, but it is not desirable.	No	
LIEUT.-COL. LORD ELCHO.	Commanding London-Scottish Rifle Volunteers.	Highly advisable, if not absolutely necessary.	Possibly	Yes.	
LIEUT.-COL. LORD BURY	Commanding Civil Service Rifle Volunteers.	No		Not if the central school is abolished.	Practical instruc most valuable; theory carried too
COL. LANE FOX	Late Grenadier Guards	(Not answered)	Yes, if the abolition of the School of Musketry is decided on.	Advisable to retain them for a year or two.	
LIEUT.-COL. BULLER	Grenadier Guards, late Musketry Instructor.	Most desirable, but on a different footing from the present.	Yes, with examination in theoretical principles.	Yes	Practical course e lent; theoretical struction not s factory, and al universally disli
LIEUT.-COL. BRIDGES	Grenadier Guards, late Musketry Instructor.	Yes	No	No	Course too long, irksome in details. Stud treated more schoolboys than cers.
MAJOR FAIRTLOUGH	22nd Regiment, late District Inspector of Musketry.	Yes		No	Simple, and calcul to meet the req ments of the sc but capable of m fication.
MAJOR ANNESLEY	97th Regiment, District Inspector of Musketry, Dublin.	Yes	No	No	The instruction g but there is too cramming for extra first-class tificate.

, and as a general satisfactory.	Time thrown away -	- - - -	Transfer of the school to the central small-arms factory; extension of the instruction to subjects generally connected with the scientific theory of projectiles, the construction of small arms, and inventions.	Abolition of position drill, except during the annual course, and of compulsory theoretical instruction for privates; and encouragement of private matches.
cient for the mainte- ce of a good standard efficiency.	Much depends on the simplicity of the lectures, and the manner in which they are delivered.	- - - -	Officers should be sent to Enfield and Woolwich to complete the course of instruction at Hythe.	More volley and independent firing; increased allowance of ammunition for matches; and restriction of judging distance practice.
efficacy proved by ults.	Not much good, except that a slight knowledge of theoretical principles is beneficial to a young soldier, to show him the reasons for what he is told to do.	The system much more popular since the modifications introduced in 1867.	No privates to be sent to the school.	Reduction in the number of points required to pass into the 2nd class.
a rule the training is od, especially the prac- al part. In the theo- tical instruction much ight be omitted.	Their value but small -	- - - -	The course should be shortened.	Improvements in various details. Extension of prizes. Encouragement of match-shooting.
simple and complete as can be made to be of al use; difficult to im- rove much upon it.	Give recruits an interest in the subject.	- - - -	Extension of the voluntary course to lectures and experiments on the latest inventions in fire-arms, &c.	No suggestions.
sults show that much ult cannot be found with	Not very great, few recruits able to understand them.	- - - -	Necessity of taking precautions to prevent officers going to Hythe who are not likely to profit by the instruction. Discontinuance of the lectures for the "first class extra" certificate, which are of small value.	No alterations necessary.

Appendix V. (C.)

School of Musketry, &c.

C.—PAPERS SUBMITTED TO THE COMMISSION.

(i.)—Memorandum by Brevet-Colonel Haliday, supplementary to his evidence.

(1.) In replying to the questions transmitted to me by the Commission, as well as in my evidence before the Commission at the War Office on the 22nd ultimo, I explained the reasons for my opinion that it would be highly inexpedient to do away with the appointment of inspectors of musketry; but at that time I confined myself to the effects of such a measure on the shooting of the regular army alone. Considering, however, that the inquiries of the Commissioners must embrace the question of the future changes that may be made in any re-organisation of the national defensive forces, it seems advisable to look to future requirements, and I think it necessary to say that I foresee the necessity for an increase in the staff of inspectors. It is this year proposed to require from the enrolled militia a more uniform and effective amount of musketry practice, and in connexion therewith to grant money prizes for good shooting to the permanent staff of all the regiments—equivalent to those allowed to the regular army,—and also certain prizes to be competed for by all the non-commissioned officers and men of these regiments who shall, during the period for which they are called out for training each year, have gone through a definite amount of target practice, and attained a certain standard of proficiency. The same reasons that render an adequate supervision by impartial officers necessary for the line, apply with even greater force to the militia, who have not the same proportion of officers trained to the strict system of the school; and I am convinced that neither could the grant of money prizes be made by the War Office with any confidence that they had been fairly earned; nor would the publication annually (as is now intended) of "the figure of merit" of the respective regiments afford a reliable comparison of the actual proficiency of these, without some such guarantee for the fidelity and accuracy of the records of practice, and security that they had been executed under the same strict conditions and adherence to rules, as is now obtained in the regular army.

But where is this supervision to be sought? It is, I conceive, impossible it can be exercised by the assistant adjutants-general who replace the (late) assistant inspectors of the reserve forces. They could not afford the time for it, and they have not the special acquaintance with the details to enable them to exercise a really efficient inspection, and to detect and check those (apparently) small irregularities which give unfair advantages in target practice; and it is almost inevitable that our inspectors will be called upon to take the militia under their supervision. But it is impossible that they could undertake such an addition to their duties without such a diminution in the frequency of their visits to corps, and such hurried examination of the practices and registers as would seriously impair their value, and render them to a great degree illusory. I may point out, for instance, that one inspector at present has under his charge the whole of Scotland and of 17 of the northern counties of England, and the amount of travelling and the time consumed in this is already far too great.

The recent re-distribution of districts in the United Kingdom indicates the limits within which effective supervision of the militia and volunteers is supposed to be practicable and convenient; and it appears to me that there should be an inspector of musketry for each of the principal nine divisions; that these should (as well as the assistant adjutants-general) be members of the staff of the general or other officer commanding, and have the special duty of supervising the rifle practice and training of the regular forces, and also of the militia in their districts, and assist the officer commanding in all matters connected therewith, attend him at his inspections, and advise on all questions connected with the training of the several corps, and on those that frequently arise on the subject of the purchase or hire of land and the construction thereon of new ranges, or the terms on which the use of ranges belonging to the reserve forces may (when required) be hired for the practice of the regular army; and that they should be considered in all respects as of the general staff of the army, and wear the proper uniform of the staff, instead of being in the anomalous position they at present hold.

The appointment of another inspector for the district which is under my own personal supervision is very much needed. The district comprises 17 counties, besides a part of Wales, and at present it is quite impracticable for me to carry on the inspection of the troops in it with anything like the frequency and devotion of time to it that the other inspectors do, without being continually absent from my office here, and thus delaying the correspondence that is always passing through it.

(2.) During the visit here of the Commissioners I showed several of the more important returns sent here by regiments and corps from all stations,—home, Indian, and Colonial, and explained to some extent the mode in which these are transmitted, scrutinised here, and further dealt with. But it is perhaps well to show in more detail the circuitous way in which much of the work is now done.

The annual returns of regiments and corps are in the first instance sent here, either direct or through the inspectors, and with them the rolls of names and applications for rewards for good shooting for those men who are qualified. After being carefully scrutinised here and checked by reference to previous reports and the figures that establish their claims, these applications, with my recommendation of the grant of prizes, are forwarded to the adjutant-general for submission to His Royal Highness the Commander-in-Chief; when approved by him, are sent on to the War Office for the authority of the Secretary of State for War for the issue of the prizes; and in that office undergo again a scrutiny, in the course of which objections are frequently made to some of these, and queries are then addressed on the points in dispute to the adjutant-general; thence sent on to me for reference, as the information on which the replies have to be made, and the objections disposed of, must be obtained in the records in my office. These replies are addressed to the adjutant-general, again sent on to the War Office and so on, until the case is decided on. So also all claims forwarded to the War Office, either form officers who have been acting as instructors temporarily, or from soldiers who may have been transferred from their regiments to others previous to the authority being received for the issue of prizes that they claim to have earned, are in the first instance referred to the adjutant-general, by him sent on to me, and the necessary information furnished by my office is then sent to the adjutant-general for the purpose of being transmitted to the War Office. Numerous questions, respecting the qualifications of serjeants, who after leaving the army join the rifle volunteers, with a view of becoming instructors in musketry, also arise, and all these and the replies thereto go through the same process, so that I may say that more than three-fourths of all the correspondence connected with this department is transacted in duplicate, and an immense amount of unnecessary letter writing and transmission of letters and documents by post goes on, which might be saved if this office were made a part of the adjutant-general's, to which department it is entirely subordinate, and of which being merely a part, the work would be done with much more certainty and without the waste of time and needless labour to copying clerks if all the records and returns were kept there, and all the correspondence with the War Office carried on directly from thence. In point of fact much of that correspondence would be rendered unnecessary (arising as it often does from misconceptions of dates or of names and regimental numbers of soldiers) by a simple memorandum, or by sending a messenger with a return or paper for inspection by the clerk who starts an objection or a query; and in this way it would become unnecessary to retain, as is at present the case to a large amount, a double set of documents, one in the adjutant-general's office, and one here.

There is not the least advantage gained by having the office of the inspector-general at the same place as the normal school for training instructors. The latter could be equally well carried on by itself, as the School of Musketry at Fleetwood was for above six years; and, while it as well as all corps and battalions are under the orders of the Horse Guards, the office of the department which has under its supervision the whole of the army ought to be central, receiving and disposing of all the reports, returns, and applications connected with the training and practice of the troops by the direct and immediate orders of the Commander-in-Chief communicated through the adjutant-general.

Wm. R. Haliday,
Colonel Commandant and
Inspector-General.

Hythe,
5th April 1870.

(ii.)—PAPER handed in by CAPTAIN DRAKE, R.E., suggesting detailed alterations in the Musketry Regulations.

Details of regulations :—

Page 10, paragraph 5. Instructor instead of captain, unless captain have a certificate. All men should drill.

Page 11, paragraph 6. All officers of companies should attend all practice of company.

Page 16, paragraph 23. Special regulations for Royal Engineers.

Page 17, paragraph 27. Too penal. Instructor drilled the non-commissioned officers before course. If men won't shoot well, non-commissioned officers can't make them.

Cleaning arms :—

Many points refer only to M. L. rifles now obsolete.

Theoretical principles :—

Want revision.

Position drill :—

Good. Cautions in teaching platoon exercise should be exactly the same, and recruit taught from the first to aim at something. Drill corporals should be well up in musketry, and drill serjeants be trained at Hythe.

Blank firing :—

Useful.

J. D. Drill :—

Paragraph 5. Vague.

Paragraph 7. No officers available.

Page 57, paragraph 22. Should not be included in J. D. drill.

Practice :—

Page 63, paragraph 14. The mark of the *inner* ring only should count, *i.e.*, what would have hit the B.E. had it stood out from the target.

Page 65, paragraph 20. Two men should always be out together. No. 3 to step out as No. 1 faces about, and to load and make ready as No. 2 fires. Men armed with B.L. should *never* load except when about to fire, and should unload when flag is hoisted for cease-firing.

Page 66, paragraph 23. Only compare register when necessary.

Page 67, paragraph 27. Add "and the officer commanding company is to see that the entries in the return are correct, initialling and dating each column."

Page 68, paragraph 31. Omit first sentence. They would naturally stand on weather side.

Paragraph 33, &c. I would re-introduce the preliminary ball firing for recruits, and divide their rounds thus :—

Preliminary	5 at 100, 5 at 200	10
1st period	10 at 200, 10 at 300	20
Preliminary	5 at 400, 5 at 500	10 for *all* men, whether passed out or not.
2nd period	10 at 500, 10 at 600	20

To drilled soldiers I would give 10 rounds at each distance, 5 is not enough; and 20 at 600, because that is the important distance with the Enfield. I cut out the "50's" and divide the rounds thus :—

1st period	10 at 200, 10 at 300	20
2nd period	10 at 400	
2nd class	10 at 500, 20 at 600	40
3rd period	10 at 700	
1st class	10 at 800	20

It will be seen that I increase the number of rounds by 20, but I do not think more time would be taken than at present, so much time is occupied in comparing targets and going to a fresh distance.

When you get an arm of precision, 700 would be taken into the 2nd class, and only 10 rounds fired at 600.

Page 70, paragraph 36. Alter 30 to 64, and 22 to 24.

Volley firing :—

I would count the number of hits only, taking each as one. Bulls'-eyes are mere flukes, and make a great difference in the figure of merit; 10 ricochet B.E.'s would count 40, and 10 fair outers only 20.

Independent firing :—

I would limit the time to two minutes, giving each man 12 rounds with the Snider, or 20 with the Martin Henry. Count hits only.

Skirmishing :—

Men on the range should not load, except by word of command when it is their turn to fire. On service, if a rifle went off at a wrong time it might shoot an enemy; on the practice ground it might shoot men or markers at other ranges. Here I would paint a one-foot square B.E., and count it two.

Page 75, paragraph 62. Independent and skirmishing should count towards figure of merit.

Page 77, orders, &c. These seem to have been framed for one particular place. See paragraph 8, page 79.

"Tower" and orders for look-out sentry.

Judging distance practice :—

Paragraph 3, page 81. The fatigue party are quite enough to estimate from, and practically always used for that purpose; this applies to paragraph 6.

Paragraph 12. See remarks on registers.

Prizes :—

No alteration to suggest in regulations.

Page 94, paragraph 8. "Soldiers who by reason," &c., is a repetition from page 92.

Page 95, paragraph 9. Omit "in order," &c.; it is scarcely sense.

Returns :—

Form A. print.

Form B. :—

No alteration to suggest.

Form C. :—

Page 100, paragraph 15. Omit the printed certificate, and let the officer write "correct," and sign. An officer's signature that a document is correct should be sufficient. I believe that officers would then really see that registers agreed with targets. Registers should be always signed by the officer or non-commissioned officer who kept them before leaving the firing point, and "correct" by the captain after comparing. The plan of entering number of B.E., C. and O. was a help, and should be resumed. My system would be this. Register keeper, as soon as practice ends, would enter—

B.E.	7 6	M.D.
C.	~~24~~ 22	M.D.
O.	36	

and sign; captain would compare, alter where necessary, as shown above, and sign as correct, see targets washed out, and begin again.

Form D. :—

It is impossible for an officer to certify that 400 answers were actually those given by the men. He should merely countersign the signature of register keeper and initial alterations. His signature implying that he was present, and the practice conducted according to regulation.

Form E. :—

The captain should call out the points from the target. The non-commissioned officer should enter them on the diagram, the captain keeping a note of the hits on each target by which to check the diagram. He could then sign to correctness.

Form F. :—

Much improved since the old progress return, but might be simplified still. It would be sufficient to enter each day, A Company at drill; I Company, practice, 2nd period; strength of battalion, and number of companies; number of companies and strength completed. Present figure of merit. This would be sufficient to give the General and Horse Guards a knowledge of how each battalion was getting on. The commanding officer should judge of causes of suspension, &c.

Form G. :—

How is any one to learn paragraph 34? The return itself is simple enough; omit the certificate. How could a commanding officer find time to compare all the entries in the M.D.P. Returns with the registers and diagrams? The marksman return he can satisfy himself about, and sign as "correct."

Page 105, paragraph 37. The commanding officer's certificate should be abolished. He *cannot* certify that all orders on the subject have been observed, unless he has been always present himself.

Rifle ranges :—

Page 110, paragraph 16. Two mantlets should be provided for each pair of ranges; one in the middle is not enough, it blocks up a large piece of the butt which is wanted when skirmishing; encourages markers to talk, and prevents them from signalling right or left, which is very valuable.

I would recommend the adoption of the "dummy" system of marking.

All targets should be numbered, and a large number board put over them; corresponding numbers should be placed at the firing points, to avoid the great danger of men firing at the wrong target.

Fatigue parties should get 4*d.* a day to pay for wear and tear of clothing.

Parties repairing old butts should be allowed the proceeds of the sale of lead.

Parties building new butts should be paid 4*d.* a day.

Proposed System for the Royal Engineers.

*1. The captain instructor to be made corps inspector of musketry.
2. The lieutenant assistant instructor to be gazetted as instructor.
3. The inspector and instructor both to be stationed at Gravesend, as being nearest to the greatest number of men.
4. As officers commanding companies of Royal Engineers are not up to the system of musketry instruction, the inspector to correspond with them as to the musketry training of their companies, and find out what assistance they have in the way of non-commissioned officers.
5. A constant stream of non-commissioned officers to be trained at Gravesend, to assist in the drill of their companies.
6. The inspector or instructor to visit each company in United Kingdom, and see them started fairly in the course.
7. One or other of these officers to train entirely companies within reasonable distance.
8. All musketry returns of the corps to be sent to the corps inspector, who should collate them, &c., all remarks necessary, and orders, being signed by the deputy adjutant-general. Some of the rules might be relaxed in the case of the Royal Engineers, to avoid taking them off the works for longer than can be helped. Inspector or deputy adjutant-general to arrange with commanding Royal Engineers as to time for course, so as not to interfere with public works.

The men of Royal Engineers lose their working pay (average, 7*s.* 6*d.* a week) while at musketry, so it should be made as easy as possible to them.

MERVIN DRAKE, Captain,
Instructor of Musketry,
Royal Engineers.

* This would appear at first sight a contradiction to my proposal to do away with inspectors of musketry, but the cases are different. Commanding Royal Engineers have not been trained in musketry, and have besides other important duties to perform which would prevent their looking closely after musketry. The inspector of musketry Royal Engineers would not be appointed to detect cheating, but to teach correctness.

(iii.)—PAPER forwarded by Brevet-Colonel HAWLEY, Commanding 4th Battalion 60th Rifles, Supplementary to his Evidence.

The attached paper represents the shooting of two companies, C. and F.

C. Company makes an average of 110·00 in 60 rounds.

F. but an average of 83 in 60 rounds, and F. gets four men (Corporal H., Privates I., L., M.) into 1st class (making their average in 3rd period, 2nd Class, 29).

C., though making the same average, viz. 29 (in 3rd period, 2nd class), has no man in 1st class.

Hence F., though manifestly the worst shooting company, has a figure of merit of 118·00, while C.'s figure is but 54·00.

Now to the figures in italics:—

The register marker of C. thinks this hardly fair, so (whilst showing the same hits on the target) he takes four points off Private D. (in 3rd period, 2nd class), leaving him at 25, adding one point to Privates A., B., E., and G. in his company, which makes them all 1st class, and his company's "Figure of Merit" springs from 54·00 to 134·00.

R. B. HAWLEY,
Colonel 60th Rifles.

Company.	Names.	First Period. Points.	First Period. Average.	Second Period, 2nd Class. Points.	Second Period, 2nd Class. Average.	Third Period, 2nd Class. Points.	Third Period, 2nd Class. Average.	Total out of Sixty Rounds. Points.	Total out of Sixty Rounds. Average.	Figure of Merit.	
C.	Private A.	54	54·00	26	27·00	*30* 29	29·00	109	110·00	First period	54·00

	„ M.	40		22		30		92		Total - -	118·00

The figures printed in ordinary numerals represent the actual firing of two companies, with average points out of sixty rounds; also the figure of merit.

The figures in *italics* show, firstly, the slight alteration required in the shooting to add 80 points per man to the average of the company; secondly, how the 80 points per man could be added to the average and the register still be correct with the target.

R. B. HAWLEY, Colonel,
60th Rifles.

D.—RETURN RELATING TO THE SCHOOL OF MUSKETRY, HYTHE.

RETURN showing the number of Officers, Non-commissioned Officers, and Men, who have been admitted to the School of Musketry since its foundation, with the numbers of the several classes of Certificates awarded.

T. L. Gallwey, Colonel, R.E.,
Commandant, S.M.E.

Memorandum to accompany Estimate No. I. based upon the course of instruction recommended by the Royal Commission on Military Education at page 45 (par. 3 B) of their First Report dated the 9th August 1869, on the supposition that instruction in the specified subjects is to be given to the non-commissioned officers and soldiers as well as to the officers.

Subjects specified by the Royal Commission on Military Education.	Remarks by the Commandant School of Military Engineering, showing the basis on which the Estimate is founded.
1. The distribution of working parties when engaged in throwing up field works.	1. It is presumed that this is intended to include the distribution of working parties for parallels and approaches to be formed by common trench work and flying sap, and that this instruction will be carried on practically.
2. Tracing and constructing breastworks and the simpler kinds of field works; making rifle pits; putting hedges, walls, bridges, and buildings in a state of defence.	2. It is presumed that this will include shelter trenches and pits, and tracing and throwing up parallels and approaches by common trench work and by flying sap; also the construction of simple open field works, and that this instruction will be carried on practically. It has been assumed that the instruction in putting hedges, walls, bridges, and buildings in a state of defence is to be by lecture only.
3. Making gabions and fascines, and forming revetments of various materials.	3. It has been assumed that each squad of 3 men will make one wicker gabion, that every man will assist in making a hurdle and a fascine, but that these will be re-made.
4. Making and planting palisades, abattis, obstacles, &c.	4. It has been assumed from the wording "making and planting palisades" that the Commission intended it to be carried out practically; it has been presumed that stockading is to be also included, the estimate does not provide for trees being actually felled for abattis.
5. Knot tying, lashing together spars, making trestle and other temporary bridges.	5. It is presumed that this will include splicing, viz., making eye, short, and long splices, and the lashing of a pier of casks, and that the trestles contemplated are such as can be made without the use of carpenters' tools; the other temporary bridges estimated for are the following, description of spar bridges,—viz. single lever (30 feet span), double lever (40 feet span), single truss (50 feet span), lever truss (50 feet span), and double truss (60 feet span).
6. Laying out encampments, including the construction of field ovens, &c.	6. It has been assumed that field kitchens should be included.
7. Attack and defence of outposts; street fighting.	7. It has been assumed that the instruction in the defence of outposts will be carried on by lecture only.

T. L. Gallwey, Colonel, R.E.,
Commandant, S.M.E.

Estimate No. II.

Estimate of Tools and Stores necessary for the Training of a Battalion of Infantry in the Course of Instruction in Field Works proposed by the Commandant School of Military Engineering.

T. L. Gallwey, Colonel, R.E.,
Commandant, S.M.E.

Memorandum to accompany Estimate No. II. of the tools and stores required for the instruction of the officers, non-commissioned officers, and soldiers of a battalion of infantry in the following course of military engineering recommended by the Commandant, School of Military Engineering.

1. The formation and extension of working parties on parallels and approaches formed by common trench work and by flying sap to be practised by night as well as by day; the formation and distribution of covering parties during the operations of breaking ground at a siege, and of the disposition of the guard of the trenches for repelling sorties, &c.; the usual distribution of working parties for field works should be explained.

2. The formation of shelter trenches and shelter pits, the throwing up of parallels and approaches by common trench work and by flying sap, the tracing and construction of simple open field works, such as flèches, redans, and lunettes, also putting up profiles of field works; making rifle pits, both detached and connected; instruction by lecture in loopholing walls, and in putting hedges, walls, bridges, and buildings in a state of defence.

3. Making fascines, gabions (both wicker and Jones' iron band), and hurdles; also forming revetments of fascines, sand-bags, gabions, hurdles, and sods, all to be done practically.

4. Instruction by lecture in making and planting palisades, fraises, and stockades; also in forming barriers, barricades, chevaux-de-frise, abattis, entanglements, wire entanglements, Jones' gabion trip, and crows feet; practical instruction in making military pits both deep and shallow, and in planting pointed stakes.

5. Practical instruction in knotting, in making eye, long, and short splices, and in lashing spars; also in the construction of simple trestles requiring only timber and rope; and in lashing one pier for a bridge of casks; also in racking down the roadway of bridges. The construction of spar bridges would necessitate a large supply of spars, rope, and blocks, and should not moreover be carried out except under persons who understand the mechanical contrivances by means of which heavy bodies are moved, and the judicious and safe application of forces to the same. Spar bridges could be constructed in model, but it must be remembered that there cannot be any fixed pattern of bridge, as each must vary not only according to the load it has to carry, but also according to the materials available for its construction, and that the calculations for spars of certain scantling will not hold good for spars of similar scantling but of a different kind of wood.

6. Practical instruction in laying out encampments and making field kitchens, ovens, and latrines; also instruction by lecture in the construction of temporary huts and stables, and making dams for water.

7. Instruction by lecture in the preparation of military posts, and in the defence of such posts; also in the attack of posts, and in street fighting; also practical instruction in lashing and carrying scaling ladders.

T. L. Gallwey, Colonel, R.E.,
Commandant, S.M.E.

Estimate No. III.

T. L. GALLWEY, Colonel, R.E.,
Commandant, S.M.E.

MEMORANDUM to accompany Estimate No. III. of the tools and stores required for the instruction of the officers, non-commissioned officers, and soldiers of a battalion of infantry in the following course of military engineering, drawn up by the Commandant of the School of Military Engineering, after a conference with the Royal Commission on Military Education.

N.B.—The figures in the brackets refer to the paragraphs of "Instruction in Military Engineering."

IN-DOOR COURSE.

Lecture on felling timber and cutting brushwood (1–10).
Lecture on gabions of various kinds (18–27, 35).
Lecture on amount of work to be expected from soldiers, on mode of tracing parallels and approaches, and of laying out tools, on way of forming and extending working parties for parallels (36–42).
Making models of portions of parallels and approaches by common trench work, and by flying sap, showing the work to be executed by each relief, both in easy and difficult soil; also models of trenches on marshy or rocky ground, &c.; portions of the parallels to be stepped (43–54).
Making models of rifle pits, both detached and connected (90–93).
Lecture on batteries; on the different kinds of fire; also on the profile of batteries, &c. (100–104).
Explanation of the use of the field level (105, 106).
Lecture on the ordinary kinds of revetments (107–113).
Lecture on mode of tracing batteries, of laying off angles, on the distribution of men, &c. for throwing up batteries (114–119).
Tracing and making a model elevated battery (120–130, 154–157, 159).
Tracing and making a model sunken battery (138–144).
Lecture on half-sunken battery (131–137).
Lecture on indented batteries and batteries on sloping ground (145–152).
Lecture on platforms (160–166), and on magazines (167–171).
Laying a model platform (Alderson's), and instruction in racking down either roadway of bridges or platforms (160).
Lecture on military bridges (344–347).
Explanation of mode of measuring distances without instruments, and of finding fords (366–368).
Making knots and splices, &c. (369–395).
Lecture on boats, rowing, casting anchors, &c. (396–402).
Making barrel piers (this may be done in a shed) (429–435, 446).
Lecture on forming rafts and bridges of casks (436–443, 446).
Lashing full-sized spars (447–450).
Lecture on laying roadway of bridges, on bridges of boats, and of rafts of timber; also on flying bridges and temporary anchors (463–469).
Lecture on trestle bridges and pile driving (470–476).
Lecture on preparing hedges and walls for defence (483–489).
Lecture on construction of obstacles (490–509).
Making models of military pits, both deep and shallow (501–503).
Lecture on defence of buildings (510–511).
Lecture on hasty entrenchments (512–516).
Lecture on field works (517–527).
Making models of redoubts (528–533).
Lecture on American tube wells (547–554).
Lecture on boning and levelling (588–594).
Lecture on assaulting columns (604–620).
Lecture on the investment of a fortress, the disposition of the guard of the trenches at a siege, on the mode of repelling sorties, and other duties at sieges.
Lecture on laying out encampments, and the construction of temporary huts and stables.
Lecture on the attack of posts, barricades, &c.

OUT OF DOOR COURSE.

Making fascines and pickets (11–17, 35).
Making wicker gabions (18–22, 25).
Making Jones' iron band gabions (24).
Making hurdles (32–35).
Extending working parties for parallels by flying sap (54).
Extending working parties for parallels by common trench work (40–42).
Throwing up parallels and approaches by common trench work and by flying sap; portions to be of different sections, and portions to be stepped (43–54).
Making rifle pits (90–93).
Throwing up an elevated battery (107–130, 154–157).
Throwing up a sunken battery (138–144, 154–157).
The several kinds of revetments to be shown in these batteries.
If boats be available, rowing in boats and casting anchors (396–402), and making a flying bridge (468).
Making trestle bridges requiring only timber and rope (470–474).
Making a suspension bridge of Jones' gabion bands (480–482).
Making Jones' gabion trip (494), and military pits (501–503).
Making hasty entrenchments (512–516).
Tracing, profiling, and throwing up simple open fieldworks, such as fléches, redans, and lunettes (517, 518).
Making field kitchens and ovens (536–541), and latrines.
Escalading, at fortresses; only joining and carrying ladders at other stations (621–626).
Laying out camps.
N.B—Some of the extending working parties, and also some of the work on parallels and batteries, to be done by night.

T. L. GALLWEY, Colonel, R.E.,
Commandant, S.M.E.

ALDERSHOT:
A nursery for young children would be excellent, *Schoolmistress D.*, 1203.
There is a school for officers' children, *Christie*, 1029.

ARTIFICERS:
Witness's regiment endeavours to train its own, *Scotland*, 856.

ASYLUM, ROYAL MILITARY: see CHELSEA:

CANTEEN:
Would admit female friends, *Drake*, 2090-2093.
Should be apart from reading-room, *Scotland*, 799.

CANTEEN—*cont.*
Profits might be applied to general regimental improvements, *Hawley, App., p.* 115.
A steady non-commissioned officer should be permanently in charge; a captain, with adjutant's allowance, superintending and having charge of funds and their appropriation, *Cambridge*, 2288–2291.
Should invariably have entrance separate from recreation room; but should be under same financial management. Recreation rooms to be aided from canteen funds, **Report**, p. xxv.; and readings, **ib.** p. xxvi.

CERTIFICATES:
I.—*As to granting.*
II.—*As a qualification for promotion to non-commissioned officers.*

I.—*As to granting.*

All certificates granted by Col. Gleig, *Pocklington*, 111, 174. Only obtained by special examination; does not give any privilege, *ib.* 106, 107. Would not give increased pay for holding *ib.* 195.
In Ireland, granted by the inspector, *Col. Gleig*, 210. Qualifications should be more practical, *ib.* 221, 222.
Superintending schoolmasters should decide who should have certificates, *Belling*, 353.
Rules proposed as to, *W. McLeod, App., p.* 119.
Qualification for a third-class, *Schoolmaster A, App., p.* 596.
Would add to back of first-class French and German, *Shute*, 1275*a*.
Would abolish extra subjects for, *Schoolmaster B.*, 647; *Elrington*, 771.
Disapproves altogether, *Christie*, 968–971, 1008.
A fourth-class should be established, **Report,** p. xiv; and issued on recommendation of Sub-Inspector. Only one extra subject to be required for first-class certificate. Marks for certificates, **ib.** p. xvi.; wording should be simplified, **ib.** pp. xvi, xlvii. Should be inserted in Pocket Ledger and noted in discharge documents, **ib.** p. xvii.

II.—*As a qualification for promotion to non-commissioned officers.*

Should be indispensable for promotion to non-commissioned officer, *Pocklington*, 184.
Would make a third-class certificate a *sine quâ non* for corporal, and a second-class for serjeant, *Scotland*, 786; subject to special exceptions, *ib.* 788, 823. Has found difficulty in obtaining educated men for corporals, *ib.* 811. Uneducated men give trouble, *ib.* 786.
Would require third-class certificate for first stripe and second-class afterwards, *McKay*, 949, 950.
Would require, subject to exceptions, for promotion, *Scarlett, Grant, Paulet, Russell, Egerton, Radcliffe, Eaton, App., p.* 112; *Clarke, Baker, Jenyns, McDonald, App., p.* 116.
Would not require high certificates; tact better than learning, *Elrington*, 729–735; but a third-class certificate might be required from corporals, *ib.* 749; a pay-serjeant can do without fractions, *ib.* 755–757; non-commissioned officers are difficult to get, and deteriorated in last 20 years, *ib.* 736, 737, 748.
Should be indispensable for promotion; *Eyre, Carey, Phillpotts, Smyth, App., p.* 112; *Nugent, Fiennes, Oakes, Randolph, Cameron, Robertson, App., p.* 114.
Promotion should depend on higher certificates coupled with regimental ability, *Schoolmaster A*, 516.
Required for promotion, as a rule; *Pearson*, 409–412: by spirit of the regulations, *ib.* 423–427. There is time to obtain a higher certificate between promotion to corporal and serjeant, *ib.* 453–455; but a first class is difficult, *ib.* 415.
Should be invariably required before promotion, *Belling*, 310, 311; which, with special classes, would not exclude good men, *ib.* 312–314; nor be unpopular with them, *ib.* 316. Grades of certificates for various ranks: one extra subject is enough. Certificates should be noted on soldiers' record and discharge, *ib.* 320.
Desirable for serjeants, but would not make rule absolute, *Cambridge*, 2258; leaving promotion to commanding officer unfettered, *ib.* 2259–2261.
Should not be indispensable for promotion, *Strathnairn, Armstrong, App., p.* 112; *Cureton, Mostyn, Col. McLeod, Hawley, Sprot, Gloster, Smith, App., p.* 114.
Should not be indispensable in the Line, *Murray, App., p.* 112.
Instances of promotion without rudimentary education, *Christie*, 1009. Would not insist on education as a preliminary to becoming lance-corporal, *ib.* 1010–1012.
As a general rule, except on active service, third-class should be required for corporal, second for serjeant, **Report,** p. xvi.

CHAPELS:
Should not be used as schools, **Report,** p. xvii.

CHAPLAINS:
Exercise sufficient control over schools, *Rev. G. Gleig*, 1279; social and moral, *ib.* 1287.
Often in the school, *Christie*, 990.
Does not visit witness's school, but collects grown children weekly elsewhere for religious instruction, *Schoolmistress D.*, 1195, 1235.

CHELSEA, ROYAL MILITARY ASYLUM AT:
I.—*Generally.*
II.—*Model (or Duke of York's) School.*
III.—*Normal (or Training) School.*

I.—*Generally.*

General organisation described, *Muller, App., p.* 151.
Not under council, *Pocklington*, 9.
Warrants for Government, &c., *App., p.* 162–164.
Proposal for training soldiers instead of drummer boys, *Dexter, App., p.* 161.
Commandant has no authority in school, *Reynolds*, 1407.

II.—*Model (or Duke of York's) School.*
1. General Organisation.
2. Masters; and Discipline.
3. Pupils.
4. Instruction.
5. Hygiene.

1.—General Organization.

Organisation excellent; want of space the only drawback, *Muller, App., p.* 152.
On good footing; fortunate in its master, *Rev. G. Gleig*, 1284.
Proceedings of a committee of 1868, *App., p.* 170.
Should be inspected weekly by regular visitors, and specially reported on annually by Director-General, **Report,** p. xxxiii. More care needed in selecting non-commissioned officers and nurses, **ib.** p. xxxv.

2.—Masters; and Discipline.

Staff for education, *McLeod*, 1457, 1511–1516.
Position of head master towards Chelsea authorities not satisfactory, *ib.* 1539; disagreeable conflict with serjeants related, *ib.* 1540–1554. Discipline would be better without the military staff, *ib.* 1476, 1566; which should be entrusted to the masters out of school, *ib.* 1477, 1479; as they maintain it readily in school, *ib.* 1483. School punishments, *ib.* 1480–1482. Correspondence as to want of respect towards head master, *ib. App., p.* 159, 160. Commandant does not always carry out regulations, *ib.* 1468. Discipline unsatisfactory, *ib.* 1458, 1473, 1567–1569.
Masters should have more disciplinary control, *Rev. G. R. Gleig, App., p.* 155.
Discipline should be under Director-General of Military Education, *Moseley, App., p.* 155.
Objects to employment of pupil teachers, *Langmead, App., p.* 153.
Army Schoolmasters waste time in, *Reynolds*, 1376.
Discipline and internal administration should be entirely under Director-General. Discipline and education should be under one head. A limit of age to be enforced, **Report,** p. xxxiii.

3.—Pupils.

There should be an educational test for admission, *Moseley, App., p.* 154.
Boys should enter earlier or have an educational test, *McLeod*, 1555–1558: they seem healthy when they first come, *ib.* 1519, 1520. Two-thirds enter army, *ib.* 1517, and turn out well, *ib.* 1518.
Boys as intelligent at 14 as country lads at 18, *Rev. G. R. Gleig*, 1305.
Disposal of boys, 1860 to 1869, *App., p.* 167.
Rank and character of 609 former boys serving in army in 1869, *App., p.* 167.
Doubts bad behaviour on entering church, *Cambridge*, 2286, 2287. Should be under military authority, and boys required to enter the army; they turn out well, *ib.* 2305–2307.
Boys from, have turned out well, *Shute*, 1261.
Boys enlisting from, are good, and fairly educated, *Pearson*, 421.
Boys from, generally good, *Elrington*, 739.
Men from, above the average, *Scotland*, 795, 796.
Good men from, *Christie*, 1003, 1004.
Maximum age for admission should be 10 years; boys should have unfettered freedom in choosing regiment or trade, **Report,** p. xxxvi.

CHELSEA, ROYAL MILITARY ASYLUM AT—*cont.*
II. *Model (or Duke of York's) School*—cont.
4.—Instruction.
Education begins at 7 years old, *McLeod*, 1503 and lasts five years, *ib.* 1504. The education fair for class in life, *ib.* 1505–1507, but would have more trades taught, *ib.* 1508–1509. Chaplain's instruction merely in catechism and religious services, which might be shortened, *ib.* 1559–1563.
Industrial teaching should have far larger place, *Abbott, App., p.* 153.
Boys might be taught carpentry, *Adams, App., p.* 152.
Music should be more taught, *Cambridge*, 2306. Boys might do own tailoring and, in a degree, repairs to buildings, *ib.* 2308, 2309. Industrial work should be encouraged, *ib.* 2318.
Confirmation annually, carefully conducted, *Rev. G. R. Gleig*, 1304. Religious service might be shortened and simplified, *ib.* 1307, 1309. There is evening Sunday school, *ib.* 1308. More trades might be taught, *ib.* 1311, *App., p.* 155.
Religious instruction and private prayer should be carefully attended to, **Report,** p. xxxiii. Shoemaking should be curtailed: carpentry, smiths' work, engineering, and gardening extended; telegraphy, and field-gun exercises taught, **ib.** p. xxxv. Musical teaching should be improved. Trades and book-work should be taught on alternate days; industrial training being assimilated to that in large civil schools, **ib.** p. xxxvi.
5.—Hygiene.
Should be removed to country, *Abbott, App., p.* 153.
Situation unhealthy, and should be moved to country, *Rev. G. R. Gleig*, 1285, 1324; *App., p.* 155.
Should be moved to country. Boys are undersized, *McLeod*, 1489, *App., p.* 159.
School should be moved to country, *Moseley, App., p.* 155.
Would not remove to country; premises need extension, *Cambridge*, 2278, 2279, and in bad condition; but under Office of Works, *ib.* 2282. No continuous holidays, *ib.* 2280, 2281. Boys should play more in Battersea Park, *ib.* 2283.
Dormitories overcrowded; insufficient space for play. Admission of visitors should be restricted, as a precaution against disease. Swimming bath should be warmed for use in winter; more clean sheets wanted. Shoemaker's shop should be abolished. More time given to play. Use of Jenning's water-closets should be extended, *Crosse, App., p.* 160. Cubical contents of dormitories, *App., p.* 174.
Material condition improved of late, *McLeod*, 1459–1463, 1470. Each boy has now a separate bed, *ib.* 1499, 1500. Food and sanitary state good, *ib.* 1484, 1494; many boys with sore heads and chilblains, *ib.* 1485. Boys' friends have too ready access, *ib.* 1486. Schoolrooms defective, *ib.* 1487, 1488. Play insufficient, *ib.* 1490, 1493. Cleanliness wants more attention, *ib.* 1495, from nurses, *ib.* 1496; who are drunken, *ib.* 1497, which does not always involve dismissal, *ib.* 1498. Every boy should have a pocket handkerchief, *ib. App., p.* 159.
Sanitary return for 1869, *App., p.* 167.
,, ,, for 1866–1869, *App., p.* 168.
Scale of diets, *App., p.* 169, 173.
Should be removed to country; meanwhile there are needed more recreation, **Report,** p. xxxiv.; gymnastic apparatus, library and reading room, 600 cubic feet per boy in dormitories, better ventilation, more personal cleanliness, improved diet, and drinking fountains, **ib.** p. xxxv.
III.—*Normal (or Training) School.*
1. Generally.
2. Masters; and Discipline.
3. Students.
1.—Generally.
Warrant establishing, *App., p.* 162.
General organisation of, *Reynolds, App., p.* 155–158.
Forms of reports used, *App., p.* 165, 166.
Excellent; but the low neighbourhood is against discipline, *Abbott, App., p.* 153.
Necessary, *Reynolds*, 1391–1396.
CHELSEA, ROYAL MILITARY ASYLUM AT—*cont.*
III.—*Normal or Training School*—cont.
1.—Generally—*cont.*
Works well; but accommodation is bad, *Moseley App., p.* 154.
Method taught excellently, *Schoolmaster A.*, 566–568.
Training useless, *Schoolmaster B.*, 654–657.
If retained, system is satisfactory, *Adams, App., p.* 152.
Too many public houses around, *Rev. G. Gleig*, 1314. Questions policy of keeping up, *ib.* 1315.
Disapproves of the establishment, *Muller, App., p.* 152.
Would abolish, and transfer premises to Model School, *Cambridge*, 2296.
Unsatisfactory; might be abolished, *McLeod*, 1522.
Should be abolished, **Report,** p. xxx.
2.—Masters; and Discipline.
Might be improved, *Rev. G. Gleig*, 1282; by giving masters more power, *ib.* 1283, 1299, 1300, 1326; and concentrating it less in the military officers, *ib.* 1301, 1302, 1310. Serjeants should salute masters, *ib.* 1326, 1327. Head master should be an officer or superintending schoolmaster, *ib. App., p.* 155.
Educational establishment under Council, not under Commissioners, *Reynolds*, 1423; in no respect under head master of Duke of York's School; position of master towards Commandant unsatisfactory, *ib.* 1405, 1406, 1409. Head master has no authority out of school, *ib.* 1407, 1408, 1421, 1422. Pupil-teachers from model school are in the way, *ib.* 1410, 1411. Master had formerly two assistants, *ib.* 1358; none now required, *ib.* 1356, 1357. Inspected half-yearly by inspector under Council, *ib.* 1359. Discipline strict, *ib.* 1413; but administered by Commandant, *ib.* 1414–1416, 1450.
3.—Students.
Regulations as to admission, *App., p.* 164.
Admissions for 10 years, *App., p.* 166.
Students fallen off from 40 to 16, *Reynolds*, 1344–1346. Conditions of entry not well known in army, *ib.* 1452. Amusements, *ib.* 1370. Witness finds discipline easily maintained, *ib.* 1381–1383. Drunkenness not common, *ib.* 1447; but has increased. Its causes, *ib.* 1363, 1386, 1387, 1449, 1453, 1454. Would not remove the school, *ib.* 1387. Hours out in the evening, *ib.* 1448. Sunday school a grievance, *ib.* 1432–1434. Accommodation very bad, *ib.* 1360–1362, 1368, 1369. Mess good, *ib.* 1364; health good, *ib.* 1417–1419. Not time for surveying; but practical trigonometry is taught, *ib.* 1424–1427. Students pass a qualifying and competitive examination, *ib.* 1380. Students must attend church twice on Sundays, *ib.* 1402. Chaplain instructs in religious knowledge, *ib.* 1403. Goes through subjects stated in course, *ib.* 1371; has not suggested any alteration, *ib.* 1373; chemistry, algebra, mechanics, geography, are most popular, *ib.* 1374; and widen students' minds, *ib.* 1375. After a lecture, students can say what they like, *ib.* 1366, 1367. Master teachers till 4 o'clock; but has work afterwards, *ib.* 1443. Students have little time for reading, *ib.* 1444, 1445. Drunkenness might involve removal from school, *ib.* 1435–1438. Few cases of immorality, *ib.* 1439–1443; some dishonesty, *ib.* 1451. Bad language at mess scarcely tolerated, *ib.* 1455. All students should have a distinctive dress, *ib.* 1401.
Students should have separate bunks, *Rev. G. R. Gleig, App., p.* 155. All students should wear same dress, *ib.* 1330, 1331. Most students have been confirmed, *ib.* 1303.
Civilians cannot enter unless certificated schoolmasters or pupil teachers, *Belling*, 347. Masters from, of imperfect physique, *ib.* 345.
Commanding officer can, under certain restrictions, recommend any private for examination at, *Pearson*, 483, 484.
Tone gone down, *McLeod*, 1528; from decrease of civilians, *ib.* 1529.
Leave in evening should be curtailed; beds should be separated by partitions, *Langmead, App., p.* 153.
Trained schoolmasters passed out in 10 years, *App., p.* 166.

CHILDREN OF OFFICERS:
No reason why young children should not be taught by schoolmaster and schoolmistress, *Shute*, 1263, 1264.

CHILDREN OF SOLDIERS:
Parents responsible in a great degree for, out of school, *Shute*, 1270–1272.
Not contaminated by soldiers, and more orderly than in civil life, *Rev. G. R. Gleig*, 1310.
Not much exposed to bad language, *Schoolmaster C.*, 1163–1165, 1175, 1176.
No harm in mixing with men; there is very little bad language, *Christie*, 1045, 1046.
Are petted by soldiers, *Schoolmistress D.*, 1206, 1207; and hear bad language, *ib.* 1204, 1205.
Boys too much with the soldiers, *Moreton*, 904–906. Girls mix with the men less than the boys, *ib.* 907.
Very healthy and strong, *Schoolmaster B.*, 670.
Are not quite strong; few enlist, *Pearson*, 456.

COUNCIL OF MILITARY EDUCATION:
Does not superintend Chelsea Asylum or Hibernian School, *Pocklington*, 9. Controls all army schools, *ib.* 10; but only nominally those in India, *ib.* 137–139. Much guided by opinion of inspectors, *ib.* 114.

DUKE OF YORK'S SCHOOL: *see* CHELSEA.

EDUCATION OF SOLDIERS:
Per-centage of education, *Napier*, *App.*, *p.* 119.
Classification returns, as now made, fallacious; men without certificate should be considered uneducated, *Schoolmaster A.*, 596, 597.
Conduct of soldiers has improved since establishment of trained schoolmasters, *Pearson*, 464, 465, and non-commissioned officers are better educated, *ib.* 466, 467.
Improved since Crimean war, *Scotland*, 826, 827.
Would not carry higher than rudiments regimentally, *Elrington*, 751. Not more than 4 or 5 per cent. of men are unable to sign their names, *ib.* 754. Objects to compulsory education beyond reading and writing, *ib.* 766–770. Not deteriorated since Crimean war, *ib.* 758–761.
Worse than before Crimean war, *Belling*, 337–341.
Classification should be based on certificates, **Report,** p. xvii.

EDUCATIONAL CERTIFICATES: *see* CERTIFICATES.

ENGINEERS:
Only enough for superintendence in war, *Ewart*, 2160–2163.

EXAMINATIONS:
Chiefly by the Superintending Schoolmasters, *Pocklington*, 115; Mr. Vicars (Assistant Inspector) examines in Ireland, *ib.* 92. Every scholar's progress is recorded, *ib.* 105. Detachment schools not examined, *ib.* 143. There is too much examination, *ib.* 196. Should be reduced, *Belling*, 350.

FARRIERS:
Assistant farrier could make a horse-shoe, *Moreton*, 917–921.

FIELD ENGINEERING:
Instruction at Chatham in 1852 described; also recent instruction at Tower with Guards, *Ewart*, 2141, 2142, 2152–2154, 2158. Musketry instructors might teach, *ib.* 2144–2147, 2177. Regulations needed for issue of tools, *ib.* 2148. Instruction could be given throughout army, *ib.* 2155, and is particularly desirable, *ib.* 2159, 2174. Some small compensation should be given for wear of clothes, *ib.* 2157.
Instruction beneficial to health, *Methuen*, 2180, 2197–2199. Would extend to whole army, *ib.* 2182, 2183 (recruits, 2191) as part of drill without extra pay, but with compensation for clothes, *ib.* 2184, 2195. Men much interested, *ib.* 2185, 2196; also officers, *ib.* 2189. The men were selected, *ib.* 2187. All examined in theodolite, *ib.* 2186. Serjeants instructed could teach others, *ib.* 2190–2193. Average time for each class 21 days, *ib.* 2200, 2201. Materials ought not to have cost 140*l.*, *ib.* 2205, 2206; available for further use, *ib.* 2207–2210.
Estimates of the cost of tools, &c., for a battalion of infantry, *App.*, *p.* 226–229.
Should be taught by instructors of musketry, **Report,** p. xlv.

FRANCE:
In army schools many things are undertaken which we do not teach; but many soldiers are very ignorant, *Col. Gleig*, 251.

GREENWICH NAVY SCHOOL:
Diet tables, *App.*, *p.* 173, 174.

HIBERNIAN MILITARY SCHOOL, ROYAL:
Charter, *App.*, *p.* 190.
Not under Council, *Pocklington*, 9.
Should be more military; governing body too large and cumbrous, *Strathnairn*, *App.*, *p.* 183.
General organisation described. Outer boundary needs repair, *Wynyard*, *App.*, *p.* 175–183.
Masters should have a better position, *Gibbons*, *App.*, *p.* 185.
Would make eight the age for admission; military spade drill, &c. should be more taught, *Colomb*, *App.*, *p.* 186.
Excellent playground; boys in great contrast to those at Chelsea, *Cambridge*, 2284–2286.
Trades better taught than at Chelsea, *Rev. G. Gleig*, 1313. Healthy; but there are difficulties in the education, *ib.* 1325.
Grounds are too exposed for health in winter, *Templeton*, *App.*, *p.* 187.
Hospital reports, 1866–1869. *App.*, *p.* 187–189.
Diet tables and time table, *App.*, *p.* 173, 182.
Good men from, *Christie*, 1003, 1004.
Thinks highly of men from, *Scotland*, 795, 796.
Return of ranks of former pupils now in army, *Speedy*, *App.*, *p.* 184.
Recommendations as to Chelsea Model School to be adopted, where applicable. Board of Governors to be reduced and made more permanent. Selection of candidates to rest exclusively with governors, who should not know their religion, **Report,** p. xxxviii. Accommodation for play, gymnastics, and assistant masters to be improved. Warmth of clothing should have more attention, **ib.** p. xxxix.

HYTHE: *see* MUSKETRY INSTRUCTION.

INDIA:
School system only nominally under Council, *Pocklington*, 137–139; amalgamation with Imperial system advocated, *ib.* 197.
Evils of school system, except as regards school-assistants, *Schoolmaster A.*, 601–614.
Officers send their children to regimental school, *Christie*, 1020, 1021.
System should be made uniform with that at home, **Report,** p. vii.

INSPECTION:
No one man could visit yearly every school in Great Britain and Ireland, *Col. Gleig*, 211.
Very hard work, *Belling*, 352.
Approves system, *Christie*, 987.
Satisfactory, *Schoolmistress D.*, 1192.
Every school to be inspected and examined half-yearly, **Report,** p. vii.

INSPECTORS:
Col. Gleig has general superintendence in Great Britain; Mr. Vicars in Ireland, *Pocklington*, 108, 109. Duties, *ib.* 110–174. Pay, *ib.* 112. Appointment, *ib.* 113. In constant communication with Council, *ib.* 114. There are local inspectors for Malta and Gibraltar, *ib.* 136.
Duties, *Col. Gleig*, 200–203, 205. Time fully occupied, *ib.* 209.
Superintending schoolmasters need not supervise old as much as young schoolmasters, *Schoolmaster B.*, 643–646.
Schoolmasters should not examine their own schools, *Schoolmaster A.*, 512. System of superintending schoolmasters works well, *ib.* 540, 541.
Inspector to inspect Ireland as well as England. Assistant inspector to be abolished, **Report,** p. vi., vii. Inspector to be relieved from obligation of visiting every school yearly. Superintending schoolmasters to become sub-inspectors, **ib.** p. vi., and to be at least one in each military district.

INSTITUTES FOR SOLDIERS:
Reports on, *Major Buckley*, *App.*, *p.* 144–146.
Conditions of success. *Seymour*, *App.*, *p.* 148.
Should be within barracks, *Ewart*, 2171, and available for lectures, theatricals, dancing, &c., *ib.* 2172, 2173.

Institutes for Soldiers—*cont.*
Would succeed, if in or adjoining barracks, *Guy, App., p.* 149.
Approves of those established on a religious basis. Considers Dover Soldiers' Home useful, as a supplement to refreshment rooms, *Russell, App., p.* 150.
Likely to fail, *McBlain, App., p.* 149.
Less attended than recreation rooms, *Murray, App., p.* 144.
Recreation rooms are better, *Scarlett, App., p.* 150.
Cannot compete with recreation rooms, *Airey, App., p.* 149.
Edinburgh Institutes of doubtful success, *Rumley, App., p.* 150.
Guards Institute has exercised a humanising and civilising effect, *Fremantle, App., p.* 147.
Guards Institute not quite successful, *Fielding, App., p.* 148; *Hamilton, App., p.* 146.
Should not be aided by Government, **Report,** p. xxvii.

Instructors of Musketry: *see* Musketry Instruction.

Ireland:
Sees no ground for school system differing from Great Britian, *Col. Gleig,* 204, 206, 207; prefers British system, *ib.* 205.

Lecture Room:
Should be provided at large stations, *Cambridge,* 2319, **Report,** p. xxvi.

Lectures:
Credit should be given for quality rather than number of lectures delivered, *Belling,* 369–373.
Magic-lantern lectures valued by the boys, but not by the men, *Moreton,* 908. Lectures on any military subject interest the men much, *ib.* 910.
Attaches value to, *Schoolmaster A.,* 543–550; a schoolmaster should not give more than one in a week to the same regiment, *ib.* 578–580; some are unworthy the name, *ib.* 582; good lectures well attended, and improve taste for proper reading, *ib.* 583, 584; should be before tattoo, *ib.* 584–587; subjects should not be limited, *ib.* 594, 595; officers rarely lecture, *ib.* 596.
Not a success, *Schoolmaster B.,* 671–673. Good lectures are well attended, *ib.* 675. Multiplication of, leads to false returns, *ib.* 689–691. Should not be after tattoo, *ib.* 693–697.
Magic-lantern lectures rather lame; practical military subjects more appreciated, *Christie,* 995, 996.
Should be military, *Carey, App., p.* 113.
Should be more frequent, *Oakes, App., p.* 115.
Satisfactory, *Paulet, Armstrong, Fiennes, Oakes, App., pp.* 113, 115.
Useful as a rule, *Scarlett, Radcliffe, Jenyns, App., pp.* 113, 115.
Interesting printed lectures should be used, *Eyre, App., p.* 115.
Does not think much of those by schoolmasters, *Col. Gleig,* 237.
Utility doubtful, *Murray, App., p.* 113.
Utility depends on interest taken by officers, *Smyth, App., p.* 113.
Value dependent on lecturer's ability, *Grant, Randolph*; which is rare, *Baker, App., pp.* 113, 115.
Less popular than readings, *Scotland,* 791.
Not cared for, *Shute, Clarke, App., pp.* 113, 115.
Not well attended, *Pearson,* 487–489.
Not attractive, *Russell, Egerton, Nugent, Cureton, Cameron, Robertson, Mostyn, Hawley, Sprot, Smith, App., pp.* 113, 115.
A failure, *Eaton, Col. McLeod, Gloster, McDonald, App., p.* 115.
Magic-lantern exhibitions not appreciated, *Scarlett, Grant, Nugent*; childish, *McDonald.*
Should be abolished, *Eaton, App., pp.* 113, 115.
Readings preferred, *Egerton, Eaton, Nugent, Cameron, Robertson, App., p.* 113, 115.
Musical entertainments preferred, *Cureton, Cameron, App., p.* 115.
Theatricals preferred, *Hawley, McDonald, App., p.* 115.
By officers, should be encouraged; should be more military, **Report,** p. xxvi.

Libraries:
List of garrison libraries, with particulars, *App., p.* 136, 138.
List of garrison libraries in India, *App., p.* 138.
Artillery libraries, *App., p.* 137.
Engineer libraries, *App., p.* 138.
Army libraries, number of, *App., p.* 139.
Well attended, *Christie,* 997.
On the whole satisfactory, *Hamley,* 715*a*; but larger grants are needed where a new library has to be established, and for artillery and engineers, *ib.,* 716, 717. No reports from India. Books average 2*s.* 6*d.* a volume, *ib.* 718.
Books, average cost per volume, *App., p.* 139.
Books should be selected with a more military view, *Strathnairn, App., p.* 113.
Contribution insufficient, *Carson,* 2216; would make over recreation room subscription to it, *ib.* 2217.
Should be regimental, *Mostyn, Col. McLeod, App., p.* 115.
Damages charged too heavily, *Cameron, App., p.* 115.
Increased allowance necessary on establishing a new library. Subscription of companies might be raised, **Report,** p. xxv.

London:
Healthy, *Cambridge,* 2279.

Model School: *see* Chelsea.

Monitresses:
Numbers, *Pocklington,* 12. Can stay till 17, *ib.* 56.
Girls of 12 should be eligible for, *Belling,* 368.
Under-paid, *Schoolmaster A.,* 597; *Schoolmaster B.,* 662–667; *Schoolmistress C.,* 1098.
Badly paid, *Schoolmistress D.,* 1185, 1187, 121; some have fair abilities, *ib.* 1186; go to schoolmaster for instruction; girls' school does not suffer thereby, *ib.* 1220–1222.
Age and pay recommended, **Report,** p. xxiii.

Musketry Instruction:
I.—*Central School of Musketry.*
II.—*Inspection.*
III.—*Instructors of Musketry.*
IV.—*Musketry Instruction.*

I.—*Central School of Musketry.*
1. Opinions generally.
2. Locality.
3. Course of Instruction.
4. Students.

1.—Opinions generally.
Well adapted to its object, *Haliday, App., p.* 214; *Legge, App., p.* 218; *Adair, Franks, Hutchinson, Wood, App., p.* 220.
Results good, *Sir G. Buller, Shute, App., p.* 214; *Mein, App., p.* 216; *Thompson, App., p.* 218.
Absolutely necessary, *Cambridge,* 2297; has raised whole character of non-commissioned officers and men, *ib.* 2298.
Essential as a normal school, *Haliday,* 1572, 1573, 1597–1601; and to decide on extra pay to marksmen, *ib.* 1615–1619.
Could not be spared, *Shute.*
Necessary, *Haliday, Straithnairn, Paulet, Garvock, Staveley, Russell, Murray, Farren, Rumley, Campbell, Borton, Armstrong, Shute, Baker, App., p.* 214; *Jenyns, Stephenson, Anderson, Weare, Thomson, Cooper, App., p.* 216; *Smith, Bridges, Fairtlough, Annesley, Thompson, Drake, Blundell, Legge, App., p.* 218; *Madden, Franks, Hutchinson, Creagh, Wood, Preston, App., p.* 220.
Desirable, *Cunynghame, App., p.* 214; *Peacocke, Lowry, Mein, App., p.* 216; *Elcho, Lt.-Col. Buller, Capt. G. Smith, Carleton, App., p.* 218.
Not absolutely necessary, *Scarlett, App., p.* 214; *Gatey, App., p.* 220.
Not necessary, *Knox, Harding, Hawley, Bowles, Thomas, Gloster, Glyn, App. p.* 216; *Bury, App. p.* 218; *Adair, Wyndham, App., p.* 220.
Present utility questionable, *Pearson,* 422.
Nearly useless, *Douglas, App., p.* 220.
Objects to; instructors can be trained better in the regiment, *Scotland,* 792–794, 862.
Regimental system of training a better principle, *Sir G. Buller, App., p.* 214.
Was necessary when established; has caused greatest improvement, *Hawley,* 1728. Would abolish now, *ib.* 1688, 1689, 1757; leaving colonels to select their own musketry instructors, *ib.* 1748–1750.
Would abolish, *Adair, App., p.* 221.
Would abolish, *Thomas,* 1769; effecting a saving, *ib.* 1777.

MUSKETRY INSTRUCTION—*cont.*

I.—*Central School of Musketry*—cont.

1.—Opinions generally—*cont.*

Would maintain permanent school, *Thompson*, 1924, for uniformity, *ib.* 1940–1943, 1985.
Would maintain, as central standard for musketry instruction, *Elrington*, 743–745.
Would pass every officer through on obtaining lieutenancy, *Jenyns*, *App.*, *p.* 217.
Would maintain as a normal school for instructors, *Drake*, 2026–2028, 2051, 2080–2083, field officers, adjutants, serjeants-major, and brigade majors, *ib.* 2059; also for serjeants required to act as instructors, *ib.* 2077–2079.
Should be a training school, *Newdigate*, 2128.
Would maintain, *Stephenson*, 1898, for instructors to pass through, *ib.* 1899–1902.
Should be a school of arms, *Thompson*, *App.*, *p.* 219.
Might be a school of arms generally, *Drake*, 2068, 2069. A simple course of field-engineering could easily be added, *ib.* 2073.
Would retain, to test fire-arms and projectiles, *Christie*, 999–1002.
Would add a place for trial of inventions, *Scarlett*, *Cunynghame*, *App.*, *p.* 215; *Anderson*, *App.*, *p.* 217; *Gatey*, *App.*, *p.* 221.
Staff needs increase, *Haliday*, 1661, 1670; number, *ib.* 1662, 1663; duties, *ib.* 1664, 1665, 1668. Men for guard, orderly, and fatigue duties are best supplied by regiments in neighbourhood, *ib.* 1595, 1596. Barrack space deficient, 1591, 1605. Canvas unsuitable to situation, *ib.* 1606, 1607. Sanitary state good, *ib.* 1592.
There has been jealousy as to recommendations from without, *Fox*, 1877, 1878.
Should be limited to a training school, staff being reduced, **Report,** p. xliii; and a thoroughly scientific officer added, **Ib.** p. xliv.

2.—Locality.

Hythe better than Aldershot as a site, *Drake*, 2084.
No suitable place more central than Hythe, *Haliday*, 1579–1581. Aldershot inapplicable, *ib.* 1647, 1648. Ten ranges needed, *ib.* 1649, of 800 yards, *ib.* 1650.
Should not be in a garrison. Is directly under Horse Guards, *Cambridge*, 2300.
Any place would do, with sufficient ranges, *Thompson*, 1925, 1977, 1978; doubts if there are enough at Aldershot, *ib.* 1926–1929.
Would remove to Aldershot, *Rumley*, *App.*, *p.* 215; *Lt.-Col. Buller*, *App.*, *p.* 217.
It might be moved to Aldershot, *Stephenson*, 1908.
Might be more useful at Aldershot, *Shute*, 1267, 1268.
Aldershot better position for central school, *Fox*, 1882, 1883.
Could be accommodated at Aldershot, *Newdigate*, 2123–2125; best place for it, *ib.* 2126, 2129; plenty of ground for ranges at Woolmer, *ib.* 2132; Adjutant-General's staff could not take musketry inspection without aid, *ib.* 2134; officer instructing in musketry might also teach field-engineering, *ib.* 2136, 2137.
Would transfer to Shoeburyness, *Blundell*, *App.*, *p.* 219.
Shoeburyness too distant, *Shute*, 1269.
Should be transferred to central Small-arms Factory, *Douglas*, *App.*, *p.* 221.
Should continue at Hythe and form part of South-Eastern district, **Report,** xlii.

3.—Course of Instruction.

System of certificates most important, *Haliday*, 1608–1612. Examination lasts several weeks, *ib.* 1652. Few officers could instruct themselves for certificates, *ib.* 1651. A certificate shows a serjeant to be a good instructor, *ib.* 1633. Drills, *ib.* 1666, 1667. Lectures are necessary, *ib.* 1677–1680. Four courses yearly of 60 officers, *ib.* 1588–1590.
Would have a single certificate, *Legge*, *App.*, *p.* 219.
Certificates to be only two, *Carleton*, *App. p.* 219.
Drill of great advantage to officers, though unpopular, *Cambridge*, 2298, 2299, 2314, 2315.
Course too theoretical, *Scarlett*, *App.*, *p.* 214; *Lowry*, *App.*, *p.* 216; *Bury*, *Lt.-Col. Buller*, *App.*, *p.* 218; *Creagh*, *App.*, *p.* 220.
Too much cramming, *Annesley*, *Carleton*, *App.*, *p.* 218; *Gatey*, *App.*, *p.* 220.
Theoretical method bad; practical good, *Douglas*; *Preston*, *App.*, *p.* 220.

MUSKETRY INSTRUCTION—*cont.*

I.—*Central School of Musketry*—cont.

3.—Course of Instruction—*cont.*

Course irksome, *Knox*. *App.*, *p.* 216; *Bridges*, *Drake*, *Capt. G. Smith*, *App.*, *p.* 218; *Madden*, *App.*, *p.* 220; *Wyndham*.
Course too long and minute, *Drake*, 2033–2039, 2072; and like a school, *ib.* 2040. Three weeks or a month should suffice, *ib.* 2041. Theory of projectiles should be taught, *ib.* 2066.
Course should be reduced and modified, *Fairtlough*, *Capt. G. Smith*, *Carleton*, *App.*, *p.* 219, *Madden*, *Wyndham*.
Course too short, *Elliott*, 2107, 2108, 2116; pleasant, except too much catechising, *ib.*, 2109. Platoon exercises desirable, *ib.* 2111–2115, 2120, 2121, except for officers of long standing, *ib.* 2117. Lectures interesting, but better read up at leisure, *ib.* 2119.
Should be a school of arms generally and rudimentary fortification, *Thompson*, 1995, 1996, with lengthened course, *ib.* 1997.
Would extend course to three months, *Annesley*, *App. p.* 219.
Course capable of modification, *Fairtlough*, *App.*, *p.* 214.
Theoretical teaching and discipline should be improved, **Report,** p. xliv.

4.—Students.

Officers sent should be specially selected, *Bridges*, *App.*, *p.* 219; *Preston*, *App.*, *p.* 221.
Supply of instructors less than demand, *Haliday*, 1602, 1603; but applications to come to Hythe exceed vacancies, *ib.* 1604. Proportion qualifying, *ib.* 1669, 1672–1676. Non-commissioned officers ought to be well selected, *ib.* 1620, 1621; are satisfactory, *ib.* 1622. Does not know grades of sailors who attend, *ib.* 1593, 1594. Would only train instructors, and not privates, *ib.* 1574–1578.
Officers from, should complete course at Woolwich and Enfield, *Creagh*, *App.*, *p.* 221.
Adjutants have to go to Hythe, *Hawley*, 1715.
Has always had officers volunteer for, *Thomas*, 1847, 1848.
Admissions, &c. since foundation, *App.*, *p.* 225.
A few selected privates sent there useful, *Cambridge*, 2298.
Would not send rank and file, *Thompson*, 1957.
Would not send privates to, *Russell*, *App.*, *p.* 215; *Bridges*, *Annesley*, *Drake*, *Capt. G. Smith*, *App.*, *p.* 219; *Franks*, *Wood*, *App.*, *p.* 221.
Privates should be reduced to a minimum, **Report,** p. xliii.

II. *Inspection.*

1. Inspection.
2. District Inspectors.

1.—Inspection.

Inspectors of some sort are necessary, *Sir G. Buller*, *Farren*, *App.*, *p.* 214; *Lowry*, *Mein*, *Glyn*, *App.*, *p.* 216.
Returns excessive; but some system necessary, *Fox*, 1872–1876.
No trouble with present system, *Stephenson*, 1904–1907, 1909; but an inspector-general at Horse Guards, with assistants, would be an improvement, 1910–1918.
An assistant adjutant-general at Horse Guards in charge of musketry, with deputies in districts, might be more satisfactory, *Thompson*, 2018.
Should only be regimental, by colonels, *Drake*, 2290–2031, 2083. Would abolish inspectors and inspector-general, *ib.* 2043, leaving supervision, if necessary, to adjutant-general and brigade majors, *ib.* 2044, 2045, 2052. Attributes any cheating to the fact of being watched, *ib.* 2046–2049. Should be separate from Hythe, *ib. App.*, *p.* 219.
Inspector-General should be a Horse Guards officer on Adjutant General's staff, **Report,** p. xliii.

2.—District Inspectors.

Time fully occupied, *Haliday*, 1638, 1639; reports monthly to district general, *ib.* 1643. Can only see part of a regiment practice, *ib.* 1654; the inspector at the Cape cannot fulfil his functions, *ib.* 1655.
Report direct to inspector-general, *Thomas*, 1788, 1789; position anomalous, *ib.* 1790; should be field officers, *ib.* 1791; office might be made a sinecure, *ib.* 1792, 1793.

MUSKETRY INSTRUCTION—*cont.*

II.—*Inspection*—cont.

2.—District Inspectors—*cont.*

District inspectors have not sufficient weight, *Hawley*, 1729–1736, 1755. Do not completely guard against improper registers, *ib.* 1720–1722.

Acts through adjutant-general of the division, recording facts not opinions, *Thompson*, 1930, 1931. Collision with commanding officers scarcely possible, *ib.* 1932–1935, 1966, 1967; duties directly under general of division, *ib.* 1936; who always takes action on his reports, *ib.* 1940. His reports to inspector-general of musketry would, if anything were wrong, be communicated to adjutant-general at Horse Guards, *ib.* 1937, 1938. In former times, some inspectors mistook their position, *ib.* 1993, 1994. It would be good to remove district inspectors from their regiments and give them rank as field officers, *ib.* 1968. Doubts if brigade majors could take duties of district inspectors, *ib.* 1990–1992.

Are on army staff like brigade majors and give their orders by virtue of the general's authority, *Cambridge*, 2300.

Inspectors might be under generals commanding districts, *Fox*, 1884, 1885.

Could not be abolished, *Haliday*, *Paulet*, *Garvock*, *Staveley*, *Russell*, *Murray*, *Rumley*, *Campbell*, *Borton*, *Armstrong*, *Baker*, *App.*, *p.* 214; *Stephenson*, *Peacocke*, *Thomson*, *Bowles*, *Cooper*, *App.*, *p.* 216; *Bridges*, *Fairtlough*, *Annesley*, *Thompson*, *App.*, *p.* 218; *Hutchinson*, *Creagh*, *Wood*, *Wyndham*, *Gatey*, *App.*, *p.* 220.

Could not be abolished, if Central School of Musketry were done away with, *Bury*, *App.*, *p.* 218.

Abolition unadvisable, *Strathnairn*, *Shute*, *App.*, *p.* 214.

Advisable to retain for a year or two, *Fox*, *App.*, *p.* 218.

Four only are required, *Scarlett*, *App.*, *p.* 214.

Could be abolished at home, except at Aldershot and Curragh, *Anderson*, *App.*, *p.* 216.

Could be abolished, *Cunynghame*, *App.*, *p.* 214; *Jenyns*, *Weare*, *Knox*, *Harding*, *Hawley*, *Thomas*, *Gloster*, *App.*, *p.* 216; *Elcho*, *Lt.-Col. Buller*, *Drake*, *Blundell*, *Legge*, *Capt. G. Smith*, *Carleton*, *App.*, *p.* 218; *Adair*, *Madden* (at home), *Franks*, *Douglas*, *Preston*, *App.*, *p.* 220.

Should be on Adjutant-General's staff in districts, **Report**, p. xliii.

III.—*Instructors of Musketry.*

1. Position.
2. Training.
3. Duties.

1.—Position.

Should be better paid, *Jenyns*, *App.*, *p.* 217.

Assistant instructor should have forage, *Drake*, 2059. A good instructor need not be a good shot, *ib.* 2070, 2071.

Have more leave than other officers, *Hawley*, 1711–1713. Are content, *ib.* 1714. Would have a captain as adjutant and musketry instructor, with a subaltern as assistant, *ib.* 1700, 1710, *App.*, *p.* 217; relieving after three years, *ib.* 1726.

Fully occupied during course, *Thomas*, 1786, 1787; and then the hardest worked man in regiment, *ib.* 1794. Has same leave as other officers, *ib.* 1795.

2.—Training.

Without Hythe, must qualify in regiments, as adjutants do, *Fox*, 1858–1862, 1879, 1880.

Regimental instruction possible, *Elcho*, *App.*, *p.* 218.

Could be trained regimentally, *Sir G. Buller*, *App.*, *p.* 214; *Knox*, *Harding*, *Hawley*, *Bowles*, *Thomas*, *Gloster*, *Glyn*, *App.*, *p.* 216; *Fox*, *Lt.-Col. Buller*, *Adair*, *Wyndham*, *App.*, *p.* 220.

Commanding officer could have no difficulty in selecting, *Thomas*, 1801, 1802, 1839–42 (with uniformity of system, *ib.* 1833, 1836). Would examine for the post, *ib.* 1843–1845; and dismiss if unsatisfactory, *ib.* 1846.

Could not be trained entirely regimentally, to be as efficient as now, *Strathnairn*, *Scarlett*, *Staveley*, *Murray*, *Farren*, *Rumley*, *Campbell*, *Borton*, *Armstrong*, *Shute*, *App.*, *p.* 214; *Jenyns*, *Stephenson*, *Peacocke*, *Anderson*, *Lowry*, *Thomson*, *Cooper*, *Mein*, *App.*, *p.* 216; *Bridges*, *Annesley*, *Thompson*, *Legge*, *Capt. G. Smith*, *App. p.* 218; *Hutchinson*, *Wood*, *Franks*, *Gatey*, *Preston*, *App.*, *p.* 220.

MUSKETRY INSTRUCTION—*cont.*

III.—*Instructors of Musketry*—cont.

2.—Training—*cont.*

Regimental instruction not desirable, *Col. J. Smith*, *Blundell*, *Carleton*, *App.*, *p.* 218; *Creagh*, *App.*, *p.* 220.

Could not be trained as adjutants are, *Thompson*, 1944, 2006.

Should be sorry to see them taught by the commanding officers, *Cambridge*, 2303.

Should have certificates from Hythe, School of Engineering, and Staff College, **Report**, p. xlv.

3.—Duties.

Instructors do their duty, *Scotland*, 863. Lectures useful, if not too dry, *ib.* 865, 866.

Could not undertake other duties, *Haliday*, 1634, 1637, 1644, 1646; but have fair leave, *ib.* 1682, 1683.

Too hard worked already to teach field fortification, *Drake*, 2074–2076.

Only occupied seven months in year, *Sir G. Buller*, *App.*, *p.* 215.

When musketry course is not on, might have other duties, *Cambridge*, 2304.

Might have duties added, *Thompson*, 1945, 1946. Should be assistant to adjutant, and instructor in arms generally, *ib.* 1974–1976; but separately responsible, *ib.* 1999–2002. Are tested in lecturing, *ib.* 1969–1971.

Might teach field engineering, if they had passed a short course at Chatham, *Ewart*, 2144–2147, 2175–2177.

Should also teach field works, *Thompson*, *Blundell*, *App.*, *p.* 219.

Should also teach gymnastics, *App.*, *p.* 215.

Might take other duties if present work were shortened, *Stephenson*, 1919–1921.

Should teach field engineering, **Report**, p. xlv.

IV.—*Musketry Instruction.*

1. System generally.
2. Necessity and Popularity.
3. Personnel.
4. Specific Suggestions.
5. Lectures.
6. Competition.

1.—System generally.

General organization of, Memorandum upon, *Haliday*, *App.*, *p.* 222. Army shooting not inferior, *ib.* 1582; but on what efficiency depends, *ib.* 1583–1587. Returns from regiments have been simplified as much as possible, *ib.* 1623–1628. Should be by companies, *ib.* 1640, 1641; is applicable to cavalry, *ib.* 1642.

Where officers take no interest, regiment shoots badly, *Cambridge*, 2302. Would not alter system at all, *ib.* 2303.

Practical, not mechanical, *Hawley*, 1756.

Has greatly improved shooting of the army, *Lowry*, *App.*, *p.* 217.

Regulated course good, *Thomas*, 1818; but taken out of commanding officer's control, *ib.* 1831, 1832.

Would maintain uniformity by inspection from Horse Guards, *Thomas*, 1770–1775, 1778–1784, 1836, 1837; army shooting fair, but might be improved, *ib.* 1776; instructors give a regular course of lectures, *ib.* 1798; which witness would not alter, *ib.* 1800; though the men may not all understand them, *ib.* 1799.

Army has reached maximum of good shooting, *Hawley*, 1727; should be thrown more on colonels, *ib.* 1690, 1758; standard being maintained by inspection from Horse Guards, *ib.* 1691–1694, 1701–1703, 1736, 1755, 1759, 1760; commanding officers now complain of interference, *ib.* 1744–1747. Instruction in the new arm will be easier than in the present. *ib.* 1695–1697. Shooting depends on practice, *ib.* 1704–1708; officers' lecture more profitable than serjeants', *ib.* 1709; correctness depends much on company officers, *ib.* 1751; who takes great interest, *ib.* 1763, 1764; uniformity will be maintained, *ib.* 1752.

Musketry should be part of general drill, *Drake*, 2054, 2055; and there should be an obligatory handbook, *ib.* 2056; lectures in present book unintelligible, *ib.* 2042; returns could be simplified, *ib.* 2057, 2058.

Approves present system of firing, *Thompson*, 1958–1965; our shooting superior to foreign shooting, *ib.* 2003, 2004; attributable to special training, *ib.* 2005.

MUSKETRY INSTRUCTION—*cont.*

IV.—*Musketry Instruction*—cont.

1.—System generally—*cont.*

Drew up system adopted in 1854, *Fox*, 1851, 1852. Ought to be the better for there being a central school, *ib.* 1855, 1863; but musketry could be taught under regimental system, *ib.* 1856. Course for recruits should be more thorough, subsequent instruction being curtailed, *ib.* 1865–1868, 1893–1895. Instruction should be by entire regiments, that commanding officers might supervise, *ib.* 1870, 1871; shooting lying down needs practice, *ib.* 1890–1892; recruits should fire before instruction to see what they gain by it, *ib.* 1896.

Practical part good, *Sir G. Buller, Armstrong, App., p.* 215; *Anderson, App., p.* 217; *Wyndham, App., p.* 221.

Preliminary drill good: firing insufficient, *Harding, App., p.* 217; simple theoretical instruction desirable, *Fox, App., p.* 219.

Could be learnt in regiments, *Christie*, 999; would make commanding officer responsible for good shooting, and abolish figure of merit, *ib.* 1048, 1049.

Can be learnt in regiment under adjutant, *Pearson*, 438, 442.

2.—Necessity and Popularity.

Necessary, *Strathnairn, App., p.* 214.

Well adapted, *Haliday, Paulet, Cunynghame, Garvock, Russell, Murray, Farren, Rumley, Campbell, Armstrong, Shute, Baker, App., p.* 214; *Jenyns, Stephenson, Knox, Peacocke, Thomson, Hawley, Bowles, Thomas, Cooper, Mein, Glyn, App., p.* 216; *Col. J. W. Smith, Bridges, Fairtlough, Annesley, Thompson, Drake, Legge, App., p.* 218; *Hutchinson, Douglas, Creagh, Wood, Gatey, Preston, App., p.* 220.

Officers and men take interest in, *Murray, Shute, App., p.* 215; *Stephenson, Knox, Peacocke, Thomson, Hawley, Bowles, Thomas, Mein, Glyn, App., p.* 217; *Col. J. Smith, App., p.* 219; *Wood, App., p.* 221.

Entails hard work in cavalry, but many men interested in ball-firing, *Jenyns, App., p.* 217.

Not now unpopular with commanding officers, though it was four years ago, *Thompson*, 2015–2017, 2022, 2023. Would not allow any latitude to commanding officers, *ib.* 2019–2021.

Course not popular with officers, *Hawley*, 1765; but necessary, *ib.* 1766.

Unpopular with officers, *Rumley, App., p.* 215; *Weare, Cooper, App., p.* 217; *Franks, App., p.* 221.

Soldiers anxious to hurry through course, *Harding, App., p.* 219.

Not popular in cavalry, *Baker, App., p.* 215.

Decidedly unpopular, *Gloster, App., p.* 219.

Distasteful, *Adair, App.* 221.

3.—Personnel.

Commanding officer's responsibility only theoretical, *Thomas*, 1805–1813, 1819–1824; there is a delicacy in regard to the inspector, *ib.* 1826. Duties will be increased, if army service be shortened, *ib.* 1814. Should be an ordinary regimental course, *ib.* 1815–1817, 1825, 1827; directly under the supervision of the major, *ib.* 1828–1830.

Junior major in each regiment to be responsible for practice, *Garvock; Rumley, App., p.* 215; *Thomas, App., p.* 217.

Should be conducted by company officers, *Murray, App., p.* 215.

Serjeant instructor wanted in cavalry regiments, *Baker, App., p.* 215; *Jenyns, App., p.* 217.

A serjeant-instructor would not be enough for recruits, *Haliday*, 1645, 1684–1686.

4.—Specific Suggestions.

More practice ammunition, *Cunynghame, Shute, Baker, App., p.* 215; *Jenyns, Lowry, Hawley, App., p.* 217; *Carleton, App., p.* 219.

More ball practice required, *Weare, App., p.* 217; *Blundell, App., p.* 219.

More ammunition needed for practice, *Drake*, 2059. A cup should be given for firing in each garrison, *ib.* 2059.

Ammunition allowed is sufficient; but men might be allowed to purchase more cheaply, *Haliday*, 1656.

Should be part of ordinary drill, *Gloster, App., p.* 217.

MUSKETRY INSTRUCTION—*cont.*

IV.—*Musketry Instruction*—cont.

4.—Specific Suggestions—*cont.*

Preliminary drill should be diminished, *Bridges, App., p.* 219.

Would discontinue some winter parades and diminish returns, *Stephenson, App., p.* 217.

Would discontinue position drill in winter, *Thomson, App., p.* 217.

Practice to be by battalions, *Fox, App. p.* 219.

All classes should be taught to fire kneeling, *Hawley*, 1737. In firing lying down, position should be left to soldier, *ib.* 1739–1742. More blank cartridge wanted for field days, *ib.* 1743, and match-shooting, *ib.* 1718, 1719.

More practice at short ranges, *Strathnairn, App., p.* 215.

More volley and independent firing recommended, *Creagh, App., p.* 221.

Would increase independent firing, *Peacocke, App., p.* 217.

Rapid independent firing a mistake, *Lowry, App., p.* 217.

Would abolish independent practice, *Capt. G. Smith, App., p.* 219.

Judging distance practice inefficient, *Lt.-Col. Buller, Carleton, App., p.* 219; *Franks, App., p.* 221.

Improvement necessary in judging distance, *Glyn, App., p.* 217.

More attention to recruits, judging distance, and skirmishing, *Armstrong, App., p.* 215; *Bridges, App., p.* 219.

System of prizes should be improved, *Russell, App., p.* 215; *Legge, Capt. G. Smyth, App., p.* 219; *Wyndham, App., p.* 221.

Rewards fairly distributed, but the money should be paid daily, *Hawley*, 1723; should depend on opinion of commanding officer, *ib.* 1767. Number should not be limited, *ib.* 1725.

Returns should be further simplified, *Farren, App., p.* 215; *Madden, App., p.* 221.

Points for second-class should be reduced, *Thomson, App., p.* 217; *Wood, App., p.* 221.

More stringency required as to figure of merit, *Col. J. W. Smith, App., p.* 219.

Should be more practical, *Staveley, App., p.* 215; *Gloster, App., p.* 217; *Madden, App., p.* 221.

Should be amended as regards old soldiers, *Scarlett, App., p.* 215; *Capt. G. Smith, App., p.* 219.

Details of alterations proposed, *Drake, App., p.* 223.

Ball practice ammunition should be increased. Text book and musketry code should be simplified. Returns should be simplified and reduced, **Report**, p. xliv.

5.—Lectures on Musketry.

Not too many lectures, *Thompson*, 1972, 1973, and very useful, *ib. App., p.* 219.

Valuable, *Staveley, App. p.* 215; *Thomson, App., p.* 217; *Fairtlough, Annesley, App, p.* 219; *Hutchinson, App., p.* 221.

Satisfactory, *Thomas, App., p.* 217.

Of some kind desirable, *Drake, App., p.* 219.

Useful to recruits, *Scarlett, Sir G. Buller, Farren, App., p.* 215; *Stephenson, Bowles, Mein, App., p.* 217; *Bridges, App., p.* 219; *Gatey, App. p.* 221.

Value dependent on lecturer's ability, *Armstrong, Shute, App., p.* 215; *Peacocke, Anderson, Cooper, App., p.* 217; *Carleton, App., p.* 219; few instructors lecture well, *Blundell, App., p.* 219.

Naming parts of lock unnecessary, *Col. J. W. Smith, App., p.* 219.

Unsuited to capacity of soldiers, *Russell, App., p.* 215; *Gloster, App., p.* 217; *Preston, App., p.* 221.

Need simplifying, *Murray, App., p.* 215; *Lowry, App., p.* 217; *Legge, App., p.* 219; *Franks, Creagh, App., p.* 221.

Not of much value, *Glyn, App., p.* 217; *Capt. G. Smith, App., p.* 219; *Wood, Wyndham, App., p.* 221.

Value doubtful, *Borton, App., p.* 215.

Almost valueless, *Bury, Lt.-Col. Buller, App., p.* 219; *Adair, App., p.* 221.

Time thrown away, *Douglas, App., p.* 221.

Listened to with impatience, *Harding, App., p.* 217.

Should be rendered intelligible to recruits, **Report**, p. xliv.

Musketry Instruction—*cont.*

IV.—*Musketry Instruction*—cont.

6.—Competition.

Matches between regiments permitted, *Haliday*, 1657–1660, and a valuable stimulus, *ib.* 1611, as well as extra pay to marksmen, *ib.* 1614. Figure of merit not a certain criterion, *ib.* 1613.

Approves competition between regiments, *Drake*, 2050.

More ammunition necessary; competition between regiments should be encouraged, *Cambridge*, 2309, 2310.

Match-shooting to be encouraged, *Adair*, *Douglas*, *Creagh*, *Wyndham*, *App.*, *p.* 221.

Competition of regiments a doubtful gain, *Thompson*, 1947; and of companies, *ib.* 1981, 1982; returns being liable to foul play, *ib.* 1948–1956. Rewards would still keep up good shooting, *ib.* 1986. Without competition, returns and staff might be reduced, *ib.* 1987, 1988.

Specimens of altered tables, *App.*, *p.* 224.

Disapproves competition of battalions, *Newdigate*, 2138, 2139.

Competition of regiments should be abolished, *Rumley*, *App.*, *p.* 215; *Fox*, *App.*, *p.* 219.

Rules for competition should be amended, **Report**, p. xliv.

Normal School: *see* Chelsea.

Pupil-teachers:

Numbers, *Pocklington*, 12. Can stay till 21, *ib.* 56.

Girls of 15 should be eligible for, *Belling*, 368.

Underpaid, *Schoolmaster A.*, 597; *Schoolmaster B.*, 662–667.

Decent girls of proper age cannot be had for the pay, *Schoolmistress C.*, 1098, 1129, 1130; *Schoolmistress D.*, 1219.

Age and pay recommended, **Report**, p. xxiii.

Readings:

Very popular, *Scotland*, 791.

Appreciated by soldiers, *Moreton*, 909; especially when officers read, *ib.* 911, 912.

With music, are successful, *Schoolmaster B.*, 674, 692.

Better attended than lectures, *Schoolmaster A.*, 588, 589; may go hand-in-hand with lectures, *ib.* 591.

Should be encouraged (with music); and aided from canteen funds, **Report**, p. xxvi.

Recreation Rooms:

Give great comfort and satisfaction, *Gleig*, 236.

Successful, *Rumley*, *App.*, *p.* 151.

Results goods, *Scarlett*, *Grant*, *Paulet*, *Eyre*, *Russell*, *Murray*, *Carey*, *Egerton*, *Armstrong*, *Radcliffe*, *Philpotts*, *Eaton*, *Clarke*, *Nugent*, *Fiennes*, *Oakes*, *Jenyns*, *Cureton*, *Randolph*, *Cameron*, *Robertson*, *Mostyn*, *Col. McLeod*, *Hawley*, *Smith*, *McDonald*, *App.*, *p.* 113, 115.

Good as far as they go, but not equal to requirements of a regiment, *Scarlett*, *App.*, *p.* 150.

Work well; more games needed, *Scotland*, 797, 798.

Would succeed if fuel were more liberal, and they were made more attractive, *McBlain*, *App.*, *p.* 149.

Answer well, but need more light and fuel, *Pearson*, 420; should be established wherever possible, *ib.* 459; and not under same roof as canteen, *ib.* 460.

Number, *App.*, *p.* 139.

List, with statement of accounts, *App.*, *p.* 140–142.

Forms of report used, *App.*, *p.* 142–144.

Accommodation insufficient, *Shute*, *Baker*, *Cureton*, *App.*, *p.* 113, 115.

Government allowance to a battery of artillery insufficient, *Eaton*, *App.*, *p.* 113.

Always full; excellent, *Christie*, 997, 998. Subscription sufficient, *ib.* 1014; used more by recruits than by old soldiers, *ib.* 1015.

Subscribers average $\frac{8}{15}$ of the troops, *Hamley*, 718.

Should be superintended by a selected officer, *Cameron*, *App.*, *p.* 115.

More games necessary, *Clarke*, *Nugent*, *Gloster*, *App.*, *p.* 115.

Fencing-rooms should be added, *Shute*, *App.*, *p.* 113.

Lecture hall or theatre should be included, *Murray*, *Baker*, *Robertson*, *Sprot*, *Smith*, *App.*, *p.* 113, 115.

Would add a writing room, *Jenyns*, *App.*, *p.* 115.

Would add workshops, *Eyre*, *App.*, *p.* 113.

Recreation Rooms—*cont.*

Refreshments should always be procurable, *Murray*, *Fiennes*, *App.*, *p.* 113, 115.

Should be made every way attractive, *Smyth*, *App.*, *p.* 113.

Buildings are wanting. Fencing and single-stick greatest attractions; magic lantern least. Manly exercises should be encouraged. Recreation in barrack, best preventive of drunkenness, *Shute*, 1265, 1266.

Warming and light need improvement, *Radcliffe*, *Mostyn*, *App.*, *p.* 113, 115.

Fuel insufficient, *Methuen*, 2202; old allowance should be given, *ib.* 2203, 2204.

More light required, *Scarlett*, *App.*, *p.* 113.

Lights should be allowed an hour later, *Jenyns*, *App.*, *p.* 115.

Should adjoin canteen, *Phillpotts*, *Smyth*, *Robertson*, *App.*, *p.* 113, 115.

Answer, *Drake*, 2085; but would amalgamate with canteen, and support from its funds, *ib.* 2086–2089, 2097, 2100 (under one committee of officers, *ib.* 2101). Should be inside barracks, *ib.* 2098, 2099. More coals wanted, *ib.* 2094–2096.

Should form one establishment with canteen and various means of amusement, *Feilding*, *App.*, *p.* 148.

May adjoin canteen, if separate, *Scarlett*, *Egerton*, *Nugent*, *Randolph*, *Hawley*, *McDonald*, *App.*, *p.* 113, 115.

Should not adjoin canteen, *Strathnairn*, *Grant*, *Paulet*, *Eyre*, *Russell*, *Murray*, *Carey*, *Armstrong*, *Radcliffe*, *Clarke*, *Baker*, *Oakes*, *Jenyns*, *Cureton*, *Cameron*, *Mostyn*, *Col. McLeod*, *Sprot*, *Gloster*, *Smith*, *App.*, *p.* 113, 115.

Should not be near canteen, *Christie*, 1016.

Should not be in juxtaposition with canteen, *Cambridge*, 2277. A captain (with an allowance) should superintend and take charge of funds, *ib.* 2288–2291. Would allow food and smoking, *ib.* 2294, 2295; but not beer and spirits, *ib.* 2292. To be attended, must be in barracks, *ib.* 2295.

Success unequivocal. Would deplore union under one roof with canteen; but it would be a gain for one committee to manage both, the recreation room being free. Should have same privilege as the school in regard to baggage, *Carson*, 2216, 2218. Men will go outside barracks for amusement, *ib.* 2219–2222, 2235, 2236. Articles sold should be on account of canteen, and at canteen prices, *ib.*, 2237, 2238. Open till half-past ten; billiards a great attraction, *ib.* 2240–2243. Success depends on being well lighted and warmed *ib.* 2223–2225. Would not allow beer, *ib.* 2227. Men receive male and female friends in reading-room, *ib.* 2228–2230. Schoolmasters feel it a stigma to be excluded from management, *ib.* 2231–2234.

Canteen funds should be utilised for, *Robertson*, *App.*, *p.* 115.

Has not heard serious complaint of want of fuel, *Ewart*, 2167. Canteen profits should be applied to, *ib.* 2168–2170.

Schoolmaster to be eligible for President, **Report**, p. xx., xxv. There should be at least two rooms; with more games, fuel, and light, **ib.** p. xxiv. A room to be set apart for fencing and manly exercises; to be distinct from canteen, but under same financial management. Government aid to depend on number of men (not of companies) in barracks, **ib.** p. xxv. Recommendations of Committee of 1861 should be fully carried out, **ib.** p. xxvi.

Regiment:

Colonel should be responsible for everything, *Thomas*, 1838.

Religious Teaching:

Schoolmasters take instructions as to, from chaplains, *Rev. G. Gleig*, 1288–1290. Chaplain may have special children's service in schoolroom, *ib.* 1291–1294, 1297, 1298; no difficulty in lay co-operation, *ib.* 1295, 1296.

Witness is not present, *Schoolmistress D.*, 1236.

Room for improvement, *Scotland*, 847, 848.

Special Sunday services for children should be extended, **Report**, p. xi. A room in barracks should be set aside for chaplain's intercourse with soldiers, **ib.** p. xvii.

SCHOOLMASTER, DETACHMENT:
Pay, *Pocklington*, 5. Exist according to circumstances; selected from soldiers, *ib.* 93. Report to regimental schoolmaster, *ib.* 144–146.

SCHOOLMASTER, REGIMENTAL:
I.—*Generally.*
II.—*Candidates.*
III.—*Duties.*
IV.—*Grievances.*
V.—*Punishments.*

I.—*Generally.*
Warrants for appointment of, *App., p.* 120–122.
Numbers, *Pocklington*, 12. A schoolmaster moves with his regiment, *ib.* 173.
A well-conducted schoolmaster is highly regarded, *Christie*, 1043, 1044.
Individually popular, and have moral influence, *Schoolmaster A.*, 529.
Soldiers have no antipathy to, *Schoolmaster B.*, 679, 680; but officers might give more encouragement, *ib.* 681.
Army feeling has changed in favour of, *Col. Gleig*, 280. Quite on a level with those in civil schools, *ib.* 282, 283.
Are not looked down upon, *Pearson*, 471; and are usually civilians, *ib.* 472. Appointed by Council, *ib.* 468–470. "Warrant" schoolmasters were more highly educated than present men, though their rank was a difficulty, *ib.* 401–405, 480–482, 485, 486.
Not popular, *Moreton*, 900–902.
Not well liked, *McKay*, 951–953.
As a class, good, *Christie*, 972, 973. A serjeant could carry on the duties as well, *ib.* 1007.
Superior to former schoolmaster-serjeants, *Scotland*, 828, 829; but slightly fallen off of late, *ib.* 830, 831. A useful body of men; in accord with commanding officers, *ib.* 789, 790.
Inferior to predecessors, *Rev. G. Gleig*, 1281. System works well, *ib.* 1316.
Present schoolmasters of less education than formerly, *Col. Gleig*, 257, 281; attributable to alteration in clothing, and prohibition of private pupils, *ib.* 258, 259.
Do not mix sufficiently with their pupils, *Pearson*, 400, 471. Some are useful in public readings, *ib.* 490.
Mortality and pulmonary disease excessive, *Schoolmaster A.*, 532–534.
Suggestions as to, *W. McLeod, App., p.* 118.

II.—*Candidates.*
Those now entering not physically qualified, *Schoolmaster A.*, 501, 502; with former regulations, a better class would be attracted, *ib.* 503, 535. A non-commissioned officer volunteering for Chelsea loses half his service and all his training time, *ib.* 564, 565; non-commissioned officers' prospects superior to a schoolmaster's, *ib.* 553, 554.
Would reduce age for civilians to 19, and open to general competition; soldier-candidates' characters to be more carefully looked to, *Adams, App., p.* 152.
Few recruited from outside, *Belling*, 332; service too unpopular, *ib.* 333, 382–384; those from Chelsea of inferior physique, *ib.* 345.
Likes best one who has been a soldier, *Cambridge*, 2263, 2276.
Less civilian candidates than formerly, *Col. Gleig*, 233; a disadvantage, *ib.* 234; nearly all are from army, *ib.* 279; and the best soldiers may not care to become schoolmasters, *ib.* 262–264.
Civilians should be encouraged, age reduced to 19, with open competition; soldier-candidates should be serjeants and of strict moral character, *Langmead, App., p.* 153.
Pupil-teachers at model school all become, *McLeod*, 1514–1516. Have fallen off, from reduced pay and altered dress, *ib.* 1523. Passing to model school to learn teaching is necessary, *ib.* 1524–1527. Best soldiers do not come, *ib.* 1530, 1531. System proposed by witness for admitting, *ib.* 1534, 1535. Superiority of civilian element, *ib.* 1536–1538.
Candidates, *Pocklington*, 70–77; civilian candidates, *ib.* 78; ages, *ib.* 79, 80; preliminary instruction has not been lowered, *ib.* 154. Army candidates on the increase, *ib.* 152, 153. Reasons for civilian candidates falling off, *ib.* 82. Pay of army students, *ib.* 83; candidates learn fortification, but not French, *ib.* 161–163, or drawing, *ib.* 164, 165.

SCHOOLMASTERS, REGIMENTAL—*cont.*
II.—*Candidates*—cont.
Intellectually improved of late years, *Reynolds*, 1335, 1336, 1354, 1355. Very few civilians, *ib.* 1337–1339; soldiers hindered by their uniform from amalgamating with them, *ib.* 1399, 1400; though a mixture is advantageous, *ib.* 1340, 1341, 1398. Best soldier makes better schoolmaster than best civilian, *ib.* 1342. Discouragements are low pay, reduction to ranks, &c., *ib.* 1343, and loss of service, *ib.* 1428–1431. Previous history unknown to witness, *Reynolds*, 1446*a*. There has not yet been difficulty in keeping up supply, *ib.* 1388.
Does not see why serjeants should not be trained for schoolmasters, *Scotland*, 837–839.
A civilian should be as good as a soldier for the post, *Shute*, 1253.
Practice under an older schoolmaster the only effectual training, *Schoolmaster B.*, 654–661.
Waste time in model school, should practise teaching at Wellington barracks or Aldershot, *Reynolds*, 1348–1351, 1376–1379.
Tests satisfactory, *ib.* 1347.
Appointments to be open to competition among civilians and soldiers, with certain qualifications. Candidates to serve six months on probation, **Report,** p. xxx. Conditions of candidature (with text books) to be promulgated in every regiment; soldier appointed schoolmaster should be posted to his former regiment, **ib.** p. xxxi.

III.—*Duties.*
Not very hard worked, *Christie*, 1028.
At work six hours a day, *Col. Gleig*, 273, 274.
Each should work weekly six hours for five days, *Belling*, 317.
Should work for a time under older masters, *Schoolmaster A.*, 569, 570. Should not be required to teach in Sunday schools, *ib.* 530, 531. Examination work and compulsory lectures give too hard work, *ib.* 532, 533. Extraneous work should be abolished, *ib.* 534. Lectures are (but should not be, *ib.* 592) expected from all schoolmasters, and sometimes involve expense. Has nothing to do with infant schools, *ib.* 542.
Should not be required to attend Sunday school; few do so, *Schoolmaster B.*, 682, 698–700. There should not be school on Saturday, *ib.* 701, 702.
Responsible for children out of school, *Shute*, 1255, 1273.
Should not be interfered with when it can be avoided; but otherwise must be submissive, *Cambridge*, 2268.
Should not be liable to Sunday-school duty, **Report,** p. xi.; nor should lecturing be obligatory, **ib.** p. xx.; nor, as a rule, a ground for promotion, **ib.** p. xxvi.

IV.—*Grievances.*
1. Generally.
2. Pay, &c.
3. Status.
4. Private Tuition.
5. Messing.
6. Uniform.
7. Examination of Kit.

1.—Generally.
Not aware of discontent, *Christie*, 1005–1007.
Seems satisfied, *Shute*, 1245.
Position uninfluential, no promotion, inspection of kit most degrading, pension unsatisfactory, *Schoolmaster A.*, 496–500.
Lodging money has been reduced, *ib.* 571–574. Treatment on board ship a general grievance, *ib.* 575–577.
Employment increasingly unpopular and dissatisfaction widespread, *ib.* 536–539.
No one so comfortable on shipboard as on shore, *Shute*, 1252.
Inducements held out not fulfilled, *Schoolmaster B.*, 621. Status and pension unsatisfactory, *ib.* 622, 623, 705. Stripes on arm, *ib.* 683; quarters, small pay to commence with, *ib.* 684; examination of kit, *ib.* 685; treatment in troop ships, *ib.* 687, 688.
The existing grievance is the uniform, knows no other, *Pearson*, 428–438; unless the men entered in expectation of warrant rank, *ib.* 443, 444. Would prefer a grievance to adjutant or commanding officer, *ib.* 477, 478.

SCHOOLMASTERS, REGIMENTAL—*cont.*

IV.—*Grievances*—cont.

1.—Generally—*cont.*

Inspection of kit, chevrons, quarters, low pay on first appointment, *Scotland*, 783, 832, 833. For quarters worse off than a London mechanic, *ib.* 804. A married schoolmaster ought to have two rooms and a kitchen, *ib.* 809, 810.
Are a sensitive body, *Col. Gleig*, 256.

2.—Pay, &c.

Pay, *Pocklington*, 81, 92, 192.
Pay sufficient, *Col. Gleig*, 232.
Sufficient, *Christie*, 1006, 1007; drawn from paymaster, *ib.* 1041, 1042.
Pay too low, *Cambridge*, 2267.
Grievances might be partly met by increased pay, *Col. A. Gleig*, *App.*, *p.* 118.
Should be 4*s.* a day to start with, and have slower increase afterwards, *Schoolmaster A.*, 555, 556.
Should receive the extra fees, *Belling*, 354, 359; as formerly, *ib.* 361. Pay and pension should be increased, *ib.* 374; and status raised, *ib.* 321–323; by augmenting rank and abolishing chevrons, *ib.* 324–327, 334–336.
Pension compared with serjeant-major's, *Schoolmaster A.*, 557.
Pay, lodging money, and pension recommended, **Report,** p. xxi., xxii. Reward for training a new schoolmaster, **ib.** p. xxxi. Appointment as schoolmaster not to involve forfeiture of service, **ib.** p. xxxi.

3.—Status.

Schoolmasters formerly ranked inconveniently as warrant officers, *Pocklington*, 148, 149. Under military discipline; regimental rank, *ib.* 85, 86, 188, 189, very appropriate, *ib.* 147, 187, 190.
Good enough, *Murray*, *Carey*, *Armstrong*, *Phillpotts*, *Baker*, *Cureton*, *Randolph*, *Smith*, *App.*, *p.* 113, 115.
No objection to warrant rank, *Strathnairn*, *Smyth*, *Eton*, *App.*, *p.* 113; *Fiennes*, *Jenyns*, *Cameron*, *Robertson*, *Hawley*, *App.*, *p.* 115.
Neither good nor harm in having warrant rank, provided serjeant-major be supreme at mess, *Scotland*, 778–782, 800–803. A competent man occupies quite a different position from a non-commissioned officer, *ib.* 805. The necessary material advantages might be conferred without giving rank above serjeant-major, *ib.* 806–808.
Present rank brings good candidates; but warrant rank might be given for long service, *Moreton*, 873–875, without jealousy; though there might be inconvenience at mess, *ib.* 876–884; which could be obviated if the serjeant-major were recognised as presiding, *ib.* 892–895.
Might have warrant rank, *McKay*, 929–933; if serjeant-major presided at mess, without question of rank, *ib.* 934–941.
After seven years should cease to be a non-commissioned officer, or be discharged, *Schoolmaster A.*, 504, 506. Having a superior grade to serjeant-major would not cause ill-feeling, *ib.* 507–511.
Warrant rank unadvisable, *Scarlett*, *Grant*, *Paulet*, *Eyre*, *Russell*, *Egerton*, *Radcliffe*, *Shute*, *App.*, *p.* 113; *Clarke*, *Nugent*, *Oakes*, *Mostyn*, *Col. McLeod*, *Gloster*, *App.*, *p.* 115.
Warrant rank worked badly; altered system admirably, *Cambridge*, 2262, 2317. Must be under Mutiny Act, and never superior to serjeant-major, *ib.* 2269, 2317.
Warrant rank objectionable, *Elrington*, 722, 723; should rank after serjeant-major, *ib.* 723, 763–765. Would not change present status, *ib.* 724, 725. High class man not needed, *ib.* 726.
Would make less military, *Shute*, 1274; but not give any rank which would remove from strict discipline, *ib.* 1246–1248. Warrant officers were done away with on this account in cavalry, *ib.* 1256.
Would not give warrant rank, *Christie*, 974–978.
After certain service would put on a par with serjeant-major and take off his chevrons, *Col. Gleig*, 228–231, 235.
Should rank with serjeant-major according to date of appointment, *Schoolmaster B.*, 629–632. Recent regulations have nullified the warrant rank, *ib.* 706–712, which should be real after 10 years' service, *ib.* 713, 714. Should have a better chance of obtaining commissions, *ib.* 714*a*.

SCHOOLMASTERS, REGIMENTAL—*cont.*

IV.—*Grievances*—cont.

3.—Status—*cont.*

Would increase pay rather than give warrant rank, *Shute*, 1249.
Strongly opposed to raising status, *Pocklington*, 192.
Improvement in status would not worsen discipline, *Col. Gleig*, 284.

4.—Private Tuition.

Have work enough without; but if allowed should be strictly guarded, *Schoolmaster A.*, 523–528.
Would be a gain on all sides to permit, under proper regulations, *Schoolmaster B.*, 641, 642.
Abused right of giving private lessons, *Belling*, 357, 358; prohibition works well; if removed, hours should be strictly limited, *ib.* 355, 357.
Very little spare time, *ib.* 356.
No objection to, *Christie*, 1020; or to schoolmaster doing what he likes in his own hours, *ib.* 1024–1027.
Prohibition a grievance; but witness would not rescind the rule, *Col. Gleig*, 252, 253, 261.
Does not object to schoolmasters giving private instruction under proper control, *Pearson*, 458.
Would not allow them to teach officers' children, except in the regimental schools, *Pocklington*, 193.
No objection to, *Scotland*, 787.
Would improve him for teaching, *Shute*, 1258, 1259.
Should be allowed under strict limitations, **Report,** p. xx.

5.—Messing.

Would restore former regulations in their entirety, and make messing at serjeants' mess optional, *Belling*, 328–331.
Messing with serjeants should be optional, *Schoolmaster A.*, 505; *Schoolmaster B.*, 626–628.
If ranking as non-commissioned officer, should be obliged to be a member of serjeants' mess, *Pearson*, 445.
No reasonable single schoolmaster could object to mess with the serjeants, who are as good as himself, *Scotland*, 834–836.
Messing with the serjeants should be optional, **Report,** p. xx.

6.—Uniform.

Uniform, *Pocklington*, 87.
Uniform gives authority, *Cambridge*, 2265.
Chevrons and sword too military; should be more akin to chaplains', *Shute*, 1250.
Making chevrons apply to masters already serving was a mistake, *Rev. G. Gleig*, 1316.
Stripes a grievance after seven years' service *Schoolmaster A.*, 504, 506.
Would take away chevrons, sash, and sword, *Rev. G. Gleig*, 1317–1320.
Dress should be less military, without chevrons or sword, **Report,** p. xx.

7.—Examination of Kit.

General orders as to, *Pocklington*, 194.
Unnecessary, *Cambridge*, 2264.
Objectionable, *Col. Gleig*, 254.
A grievance, *Rev. G. R. Gleig*, 1328.
Kit should not be examined, *Moreton*, 891.
A grievance, and unnecessary, *Pearson*, 433, 434.
No object in, *Shute*, 1251.
Might be dispensed with for first and second classes, *Christie*, 1032–1040.
Should be abolished, **Report,** p. xx.

V.—*Punishment.*

Very few misbehave, *Reynolds*, 1352, 1353.
For misconduct should be dismissed, not reduced, *Shute*, 1275.
Objects to reduction to ranks, but it is more lenient than dismissal; fines or forfeiture of service might be adopted in minor cases, *Cambridge*, 2274, 2275.
Dismissal, loss of service, or suspension should be substituted for reduction to ranks, **Report,** p. xx.

SCHOOLMASTER SERJEANT:

Preferable to present schoolmasters, *Elrington*, 726.
Had advantages in way of discipline, *Shute*, 1254.

SCHOOLMASTER, SOLDIER ASSISTANT:
Defects of system, *Col. A. Gleig, App., p.* 117.
Selected from ranks for monitors in boys' school, *Pocklington*, 57. Description, *ib.* 95–97, 102–104. Numbers allowed, *ib.* 98–101; total numbers, *ib.* 150, 151. Modifications proposed in system of appointing, *ib.* 186.
Make egotistical masters; should be more permanent, *Belling*, 345, 346.
Should remain at work for a year certain, not losing regimental rank, *Gleig*, 238–240.
Objects to, *Pearson*, 417, 446.
Number, qualification, and pay recommended, **Report,** p. xxii.

SCHOOLMASTERS, SUPERINTENDING:
Pay and rank, *Pocklington*, 87, 88. Do not mess with the officers; stationed in garrisons, *ib.* 89. Duties, *ib.* 90, 91; there is one in Canada, *ib.* 135, 136.
Are commissioned officers, *Col. Gleig*, 298; rank as ensigns, *ib.* 285. All schoolmasters have a chance of attaining the rank, *ib.* 287. Should be sub-inspectors, *App., p.* 117.
Pay is same as former schoolmaster's, *Belling*, 374. May lose by promotion to, *ib.* 375, 379, 380. When private pupils were allowed emoluments were much greater, *ib.* 377. Should be sub-inspectors, on footing of pay sub-department, *ib.* 378, 396. There is no increase of salary, *ib.* 381. Should be relieved from reporting details to commanding officer, *ib.* 350, 351; which would allow of more supervision, *ib.* 352.
Witness would lose by promotion to superintending schoolmaster, *Schoolmaster A.*, 558–563; *Schoolmaster B.*, 704.
Should be sub-inspectors, **Report,** p. vi; pay and retirement; pension of wife, if a schoolmistress, **ib.** p. xxi.

SCHOOLMISTRESS, DETACHMENT:
Number, *Pocklington*, 12; pay, *ib.* 5.

SCHOOLMISTRESS, REGIMENTAL:
Numbers, *Pocklington*, 12.
Underpaid, *Schoolmaster A.*, 597; *Schoolmaster B.*, 662–667.
Would give each 6*l.* a year more, *Belling*, 366. They require higher pay, *ib.* 348, 349. Pass an easy examination, and are supposed (unless certificated) to have been employed in army schools, *ib.* 387, 388. Single schoolmistresses have too large an allowance for lodgings, *ib.* 366, 367.
Has 30*l.* a year, *Schoolmistress C.*, 1052–1056. 36*l.* is the least a woman can live respectably on, *ib.* 1057, 1058. Pension, fairer than the pay, *ib.* 1078–1083. In India a civil schoolmistress has four times what an army schoolmistress has, *ib.* 1154–1158. Liable to discharge or to be placed on unemployed list without pay without notice, *ib.*. 1073, 1074. Have not deteriorated, *ib.* 1106, 1108; but are more soldiers' daughters than formerly, *ib.* 1107; and the change in the regulations has caused them to be treated with less respect, *ib.* 1109, 1110. As a rule married schoolmistresses are wives of schoolmasters or of non-commissioned officers, *ib.* 1125, 1126. It would be a great convenience if allowed to arrange for rations, *ib.* 1160-1162. Should not be classed as a woman of the regiment, *ib.* 1064; for travelling, *ib.* 1066–1068; in which a married schoolmistress is worse off than a single one, *ib.* 1069, 1070. In India, schoolmistress treated differently from serjeants' wives, *ib.* 1100–1105. A single woman has 8*s.* 6*d.* a week, if quarters be not provided, which is liberal, *ib.* 1059–1062. Quarters, two small rooms, without kitchen, *ib.* 1084–1088; worse, in camp, than a staff-serjeant's, *ib.* 1089, 1090. A single schoolmistress has two rooms, *ib.* 1159. Liable to have to help in Sunday school, which is a hardship (but is rarely required to do so), *ib.* 1133–1136, 1172. Has only one monitress to help with 40 children, which is insufficient, *ib.* 1111–1114, 1137, 1138; as the children have to be divided into several classes, *ib.* 1115. Twice every morning loses her monitress to schoolmaster for tuition, *ib.* 1143–1147.
Could not live on salary, *Schoolmistress D.*, 1182; a single woman could on 36*l.*, *ib.* 1183, 1184. Has been refused rations at Government rate, *ib.* 1223, 1224, 1228, 1229. Quarters, as respectable as possible in a camp, *ib.* 1180. Travels second-class, as unmarried, *ib.* 1188–1190.
Rules as to salary and quarters call for revision, *Col. A. Gleig, App., p.* 118.
Pupil-teachers make the best, *Pocklington*, 56.
Should be relieved from Sunday school duty, **Report,** p. xi.: pay to be raised, and lodging allowance reduced; all to be treated alike as regards qaarters and allowances; to draw rations; to have option of lodging allowance if unmarried, or away from husband; minimum pension to be 1*s.* a day, **ib.** p. xxiii.

SCHOOLROOMS:
Some are too small, *Belling*, 319.

SCHOOLS, ARMY:
I.—*Generally.*
II.—*Adult.*
III.—*Children's.*
IV.—*Infant.*
V.—*Industrial.*
VI.—*Sunday.*
VII.—*Special Classes.*

1.—*Generally.*
Letter of the Duke of York recommending regimental schools; and War Office circular of 1811 establishing them, *App., p.* 120.
Under Council, *Pocklington*, 10; worked on general and uniform regulations, *ib.* 11, 118, 119. Where constituted, *ib.* 4, 178; as a rule healthy, *ib.* 68; well furnished and supplied, *ib.* 69. Not self-supporting, *ib.* 179. Commanding officers responsible for management and teaching, *ib.* 155–158; give Council every assistance, but may not alter regulations, *ib.* 159, 169. Playgrounds attached, where practicable, *ib.* 67.
Have increased desire for instruction in army, *Shute*, 1242.
A great boon to army, and have wrought a most beneficial change, *Rev. G. Gleig, App., p.* 116.
Results inadequate to expense, *Col. Gleig*, 212.
Satisfied with, *Pearson*, 413, 414; and its inspection by superintending schoolmaster, *ib.* 418.
Forms of reports required, *App., p.* 122–129.
Specimen time tables, *App., p.* 130–135.
Reports and returns should be reduced. Schoolmasters' reports to be quarterly, **Report,** p. viii.

II.—*Adult Schools.*
1. Generally.
2. Attendance of Soldiers.

1.—Generally.
Subjects taught, *Pocklington*, 61; situation, *ib.* 62, 63. Not satisfactory, nor likely to be, unless recruits be forced to attend, *ib.* 3, 130. Attendance optional, *ib.* 7, 31. Number of pupils cannot be stated, *ib.* 13–17, 32; average may be 30 daily, including recruits, *ib.* 36, 131; or 5 per cent. on strength, *ib.* 132. Commanding officer cannot compel attendance, *ib.* 33, 34, 60; though he may have means of direct encouragement, *ib.* 35. Examined twice yearly by schoolmaster; once by superintending schoolmaster, *ib.* 140-142.
Commanding officers' evince more interest than formerly; but men are less excused from parade, *Belling*, 342–344.
Attendance irregular; result nil, *ib.* 302.
Regiments now so weak that there is little attendance, *Elrington*, 741. Men do not like it, *ib.* 742. Voluntary evening school better attended, *ib.* 746.
Alterations suggested, *W. McLeod, App., p.* 119.
Would divide into upper and lower school, *Belling*, 317.
Promotion to non-commissioned officers should not depend mainly on school report, *Col. Gleig*, 245; an illiterate but good soldier should be promoted, and then made to attend school, *ib.* 246–248.

2.—Attendance of Soldiers.
Men enlisted hereafter might be forced to attend school, *Col. Gleig*, 218; but not present men, *ib.* 219, who might be dissatisfied, *ib.* 266. Opposition in regiments to men attending school has died out, *ib.* 243, 244. A great gain where men attending school may be absent from parade, *ib.* 220.
Work well, *McKay*, 948; would pass all soldiers through after learning drill, *ib.* 925–928.

Schools, Army—*cont.*
II.—*Adult Schools*—cont.
1.—Generally—*cont.*
Would make every man attend, after dismissal from drill, *Christie*, 966, 967. Certain hours fixed by commanding officer might be set apart for school, *ib.* 989. A few non-commissioned officers attend when extra subjects are taught, *ib.* 1031. If needless sentries and orderlies were abolished, school efficiency would be increased, *ib.* 1047.
One hour a day might be set aside for, *Grant*, *Phillpotts*, *App.*, *p.* 112; or one hour and a half after being dismissed drill, *Nugent*, *App.*, *p.* 114.
Attendance should be compulsory until a certificate be obtained or proved hopeless, *Col. A. Gleig*, *App.*, *p.* 117.
No difficulty in infantry, from first joining, *Armstrong*, *App.*, *p.* 112.
Attendance should be compulsory, from first joining, on men who cannot read or write, *Cureton*, *Cameron*, *App.*, *p.* 114.
Attendance of recruits not now compulsory, *Elrington*, 752, 753; but would make it so, up to a certain standard, *ib.* 727, 728.
Attendance of uneducated recruits should be compulsory, *Belling*, 303–305, 309, 385, 386, 393–395; of old soldiers voluntary, *ib.* 306–308.
Every recruit should attend school until he can obtain a certificate, *Pocklington*, 181–183, 198, 199.
Compulsory attendance desirable for recruits only, from first joining, *Smyth*, *Eaton*, *App.*, *p.* 112, *Jenyns*, *Mostyn*, *App.*, *p.* 114; after dismissal from riding-school, *Shute*, *App.*, *p.* 112; after completing drill and rifle instruction, *Sprot*, *App.*, *p.* 114.
More regular attendance needed, *Col. Gleig*, 213. Attendance of recruits, after learning certain drill, should be compulsory, until obtaining certificate, *ib.* 214, 215, 265, 275–278; Commanding Officer fixing school hours, *ib.* 216, 217. A soldier could attend without losing military work, *ib.* 267–272. Non-commissioned officers should attend till they reach a certain qualification, *ib.* 218.
Attendance of recruits should be compulsory, after dismissal from drill, until certificate be obtained, *Schoolmaster A.*, 513–515, 615, 616.
Would compel attendance of all recruits, after being dismissed from preliminary drill, *Shute*, 1260.
Time for, could be spared on first joining, *Scarlett*, *App.*, *p.* 112, not until dismissed drill, *Fiennes*, *App.*, *p.* 114.
No difficulty in compulsory attendance, from first joining, *Russell*, *Murray*, *Carey*, *App.*, *p.* 112, *Randolph*, *Robertson*, *App.*, *p.* 114; from being dismissed drill, *Col. J. McLeod*, *McDonald*, *App.*, *p.* 114.
Compulsory attendance advantageous, but not daily, nor on first joining, *Strathnairn*, *App.*, *p.* 112; *Baker*; *App.*, *p.* 114.
Recruits should not be sent to school until dismissed drill, *Schoolmaster B.*, 633; and then first entrance should be optional: few would refuse, *ib.* 634–640.
In mounted regiments would not compel school attendance until after a year's service, *Scotland*, 784, 785, 812–816; would then require certificate to be gained, *ib.* 817–822: sees no difficulty in certain hours being set apart for school if commanding officer choose them, *ib.* 858–861.
Attendance in cavalry difficult in summer: should in winter be during second year's service, *Clarke*, *App.*, *p.* 114.
Compulsory attendance possible in winter only; should be on first joining, *Oakes*, *App.*, *p.* 114.
Would encourage attendance, but not compel if commanding officer were satisfied of inability to learn, *Cambridge*, 2244–2253; leaving arrangements to commanding officer, *ib.* 2254, 2255, 2257, 2316: in summer there would be little school, *ib.* 2256.
Compulsory education undesirable, *Eyre*, *Egerton*, *Radcliffe*, *App.*, *p.* 112; *Hawley*, *Gloster*, *Col. J. Smith*, *App.*, *p.* 114.
Compulsory attendance impracticable, *Paulet*, *App.*, *p.* 112.
Interferes with recruits' drill, *Moreton*, 888; would keep recruits from school till they had learned drill, *ib.* 889; making attendance afterwards compulsory till a third-class certificate was obtained, *ib.* 890. Cavalry soldiers can only attend two days a week, *ib.* 896–899.
Attendance should be optional for recruits and compulsory afterwards until men attain third-class certificates, *Pearson*, 406–408, 473; which would not prejudice recruiting, *ib.* 474.
Should be compulsory on a recruit from joining until he obtain lowest certificate; on an enlisted boy, until he obtain second-class certificate. Five hours weekly should be minimum attendance, **Report**, p. xv.

III.—*Children's.*
1. Generally.
2. Detachment Schools.
3. Discipline.
4. Fees.
5. Girls' Schools.

1.—Generally.
Well conducted; children in advance of those from civil schools, *Schoolmaster B.*, 669.
Superior to those in civil life, *Belling*, 302; attendance regular, *ib.* 389; and almost compulsory, *ib.* 392. Civilian's children not admitted without permission of commanding officer, *ib.* 360, 361. Certificates should be granted to children, *ib.* 320.
On the whole, good, *Col. Gleig*, 223; average above village schools, *ib.* 224, 241. Children change continually, *ib.* 223. Sought after by civilians attending camp and barracks, *ib.* 242; religious teaching, system described, *ib.* 289; works without obstacle, 292; Bible lessons not compulsory if parents object, *ib.* 290; very few do, *ib.* 291, chaplain has a voice in, if of same persuasion as schoolmaster, *ib.* 293, 294.
Examinations too frequent, *Col. A. Gleig*, *App.*, *p.* 118.
Very superior to those in civil life, *Rev. G. Gleig*, 1280.
Quite satisfactory, *Christie*, 979. Shoemaking or tailoring could be taught, *ib.* 981. Ladies and officers take much interest, *ib.* 991. All boys can learn trades if old enough, *ib.* 1013. Officers' and soldiers' children should not mix—at home stations, *ib.* 1030.
Work well, *McKay*, 947, 954, 955. Boys turn out well, *ib.* 957, 958; but might with advantage be less with the men, *ib.* 956.
Soldiers are satisfied with, *Moreton*, 887, 902. Boys do not see much of the men in school hours in a cavalry regiment, *ib.* 903.
Valued in service, *Pearson*, 457.
Very successful, *Pocklington*, 3, 117. Attendance compulsory; educational status higher than that of national schools, *ib.* 25. There are 20,000 children under instruction, *ib.* 4, 18, 19; including pensioners' children, *ib.* 29, 30; of whom 8,574 are grown boys and girls, *ib.* 20; children of pensioners and garrison employés may attend, *ib.* 26, 27; of such about 3,000 attend, *ib.* 28. Woolwich garrison schools have 200 to 300 pupils, *ib.* 58, 59.
Thirty-five grown children a fair attendance, *ib.* 58.
School opens daily with prayers; twice a week chaplain of each denomination gives religious instruction, *Pocklington*, 64; religious predilections attended to, *ib.* 65.
Expenditure, *Pocklington*, 125–127, 178.
Subjects taught, *ib.* 42, 47, 53, 133.
Well conducted; but if there were a larger teaching staff would keep boys at work till 4 p.m., *Scotland*, 840–846. Trades not taught, *ib.* 854, 855. Gymnastics voluntary, *ib.* 857.
Singing taught, *Pocklington*, 45.

2.—Detachment Schools.
Numbers of children for, *Pocklington*, 4, 178.
Should be examined by superintending schoolmasters, *Col. Gleig*, 225. There are about 30 in Great Britain, *ib.* 227.

3.—Discipline.
Discipline absolutely under schoolmaster and schoolmistress, *Pocklington*, 166; who have a little power of punishment, *ib.* 167; but may not inflict corporal punishment, *ib.* 168, 169, beyond an occasional cuff, *ib.* 170. Ladies not permitted to interfere with schoolmistress, *ib.* 172.

Schools. Army—*cont.*
III.—*Children*—cont.
4.—Fees.
Payments for pupils, *Pocklington*, 124, 175–177.
Would abolish, *Schoolmaster B.*, 676–678.
Would remit those for regimental children, *Belling*, 374; as preventing their attendance, *ib.* 390, 391.
Extra fees should go to schoolmaster, *ib.* 354, 359, 361.
Fees should not be required for children of those actually in military service, **Report**, p. x.
5.—Girls' Schools.
Satisfied with, *Schoolmistress C.*, 1091. Children of outsiders irregular in attendance, *ib.* 1116–1119. Visits by ladies elevate school in parents' eyes, *ib.* 1166, 1167. Advantage of dispensing with school on Saturdays, *ib.* 1131, 1132, 1170, 1171.
Well-conducted, *Schoolmistress D.*, 1191.
Commanding officer and ladies of regiment assist, *ib.* 1193, 1194. Saturday should be a holiday, *ib.* 1200, 1201.
Washing could not be taught, *ib.* 1202.
Children sometimes clean, *ib.* 1208; generally obedient, *ib.* 1209. If not, complains to commanding officer, *ib.* 1210; not to parents, *ib.* 1211. Would alter hours of attendance, *ib.* 1225–1232.
IV.—*Infant.*
5,400 infants under instruction, *Pocklington*, 20; infants pass into grown children at discretion of schoolmaster and schoolmistress, *ib.* 21–23, 120–123. 25 to 30 a fair attendance, *ib.* 58. Children over two years old, *ib.* 6. Very young infants are kept amused, *ib.* 171. After 8, boys cannot stay in infant school, *ib.* 123.
Satisfied with, *Schoolmistress C.*, 1091; but infants come too young; and it should be optional with schoolmistress to receive those under 3, *ib.* 1092–1097. If in a separate room, one girl might take charge of very small infants, *ib.* 1123, 1124, 1139, 1142; which would be good for the women of the regiment and for the other children, *ib.* 1148–1150. A pupil-teacher or intelligent woman should be in charge, *ib.* 1151, 1152. Industrial grant too large merely for materials, *ib.* 1099. Boys pass out at eight years old; girls when they can read words of two syllables, *ib.* 1120–1122. Chaplain never visits, *ib.* 1168, 1169.
All taught industrial work, *Christie*, 984–986. Industrial grant may be looked on as children's clothing fund, *ib.* 1017–1019.
As regards teaching, there are too many babies, *Schoolmistress D.*, 1196–1199.
Chaplains only come in contact in giving special religious instruction, *Rev. G. Gleig*, 1321–1323.
Inspected by superintending schoolmaster, *Pearson*, 451; and by regimental schoolmaster, when ordered, *ib.* 452.
Works well, very necessary, officers' wives supervise, *Scotland*, 849–853.
Schools, Army:—*cont.*
IV.—*Infants*—cont.
Infant school should be in a separate room, and should be regimental, **Report**, p. x.
V.—*Industrial.*
Girls taught needlework, *Pocklington*, 46, 49–51. Capitation grant, *ib.* 48, 180. Cooking not taught, *ib.* 52; nor washing, nor household work, *ib.* 134. Boys not taught any industry, *ib.* 54, 133.
Grant too large, and misunderstood, *Schoolmaster A.*, 597, 598.
Half the grant would suffice, *Schoolmaster B.*, 662.
Grant works badly; would reduce to 2*s.* 6*d.* each child, *Belling*, 366.
Sees no means of teaching washing, *Schoolmistress C.*, 1173. Mending clothes, &c. allowed every Friday, *ib.* 1174.
Grant too small to satisfy parents, who look on it as a clothing fund, *Schoolmistress D.*, 1215, 1216. Is issued only to girls, and to boys in infant school, *ib.* 1233.
No trade taught, except sewing for the girls, *Moreton*, 916.
Grant needs more supervision, *Pearson*, 447–450, by ladies, unofficially, *ib.* 475, 476. It provides about enough materials, *ib.* 462, 463.
Grant should be reduced to 2*s.* 6*d.* a head, **Report**, p. xi.; and subjects of industrial training to be extended, **ib.** p. xi.
VI.—*Sunday Schools.*
There is Sunday school; children go to church with schoolmaster, *Pocklington*, 66.
Arrangements good, *Moreton*, 913.
Does not attend, *Schoolmistress D.*, 1212–1214.
VII.—*Special Classes.*
On increase in regiments, *Pocklington*, 3; and witness has a good opinion of, *ib.* 185. Average 25 men, *ib.* 36, 37; relieved from all duty, except guards; instruction continuous and compulsory, *ib.* 38–41.
Excellent; but selection of men to attend should rest more with schoolmaster, *Schoolmaster A.*, 517–522, 551, 552.
The only means of imparting instruction, *Schoolmaster, B.*, 648; but selection of men for them should come more to schoolmaster, *ib.* 649–654.
Popular, *Belling*, 315.
Approves highly, *Cambridge*, 2311; would excuse men attending from evening parades, *ib.* 2312; but not from certain other duties, *ib.* 2313.
Evening voluntary, with average attendance of about 6 out of 20 on books, *Christie*, 992–994.
Good, when not used to shirk work, *Pearson*, 416.
Should be held at discretion of commanding officers; but men to be limited to those holding fourth-class certificates, and non-commissioned officers specially promoted, **Report**, p. xvii.
Training School: *see* Chelsea.
York, Duke of, School: *see* Chelsea.

Memorandum referred to the Royal Commission on Military Education by the Secretary of State for War.

The scheme for the re-organisation of Sandhurst proposed by the Commission—a principal feature of which is, that every one admitted to the College should, if his industry and conduct are satisfactory, be entitled to a commission without purchase—is based on the supposition that there will be 100 non-purchase commissions at the disposal of the Commander-in-Chief each year, besides those non-purchase commissions which are given to non-commissioned officers. This would admit (with a two years' course) of 100 admissions to the College annually, giving a total establishment of 200 cadets.

In consequence, however, of the reduction in the establishment of officers of the army, and the gradual absorption of vacant commissions necessary to carry out this measure, it appears that, after providing for existing claims, there will only be 22 commissions without purchase available (exclusive of those reserved for Queen's and Indian cadets) between the 1st January 1871 and the 1st November 1874, when the absorption will probably be complete.

The number of commissions to be given to Queen's and Indian cadets will also, in consequence of the absorption, be reduced to about 13 a year, beginning with 1871, or (say) 50 for the three and three-quarter years up to 1st November 1874.

If, therefore, the College of Sandhurst should be re-organised in January 1871, on the principle laid down by the Commission, the number of free commissions available as prizes for the cadets (including Queen's and Indian cadets) cannot be expected to be more than 25 at each of the three first half-yearly examinations, after the establishment of the College.

It is believed that there will be no objection to raising the qualification now required for Queen's and Indian cadets, both at the entry into Sandhurst, and when they pass out for commissions without purchase; so that the objection felt by the Commission to the admission of these cadets into Sandhurst will probably no longer exist.

After the absorption of vacant commissions has been completely carried out there will be (in consequence of the reduced establishment of officers of the army) a smaller number of commissions without purchase disposable annually than was calculated by the Commission. It is estimated that their number will not exceed 56 each year, including those allotted to Queen's and Indian cadets; so that, even supposing the latter class of candidates to be admitted to the College, it will not be possible, if the principle laid down by the Commission be adopted, to maintain the establishment of the College, after allowing for casualties, at more than 120 cadets.

Under these circumstances the Commission are requested to re-consider their scheme for the re-organisation of Sandhurst, and to express their opinion on the following points:—

(1.) Whether the prospect of a free commission should be held out to every cadet admitted to Sandhurst, either by not absorbing the vacant non-purchase commissions, by buying up purchase commissions, or by any other means?

(2.) Whether it would be possible to maintain the College at such an establishment as would afford adequate guarantees for discipline and industry, by holding out to those admitted to it the prospect of other advantages than a free commission, such as pecuniary prizes on a graduated scale, prior claim to commissions over candidates examined for direct appointments, &c.?

(3.) Whether the Commissioners have any other mode to suggest for the improvement of the Royal Military College, supposing their recent recommendation cannot be carried out in its integrity?

Observations by the Commission in reply to the above Memorandum.

The Commissioners having considered the foregoing memorandum referred to them by the Secretary of State for War, in which it is intimated that the 100 annual free commissions, on which they had counted in their original scheme for the re-organisation of Sandhurst, will be practically reduced to about 40, apprehend that the most convenient course will be to place upon paper, for the consideration of the Secretary of State, the various modes which suggest themselves of dealing with the altered conditions of the problem, without undertaking to indicate which should be preferred. They are inclined to adopt this course for two reasons:—First, because two of the appended suggestions involve the annual expenditure of a considerable sum of public money, and they hardly feel themselves in a position to forecast what financial arrangements Parliament may be willing to sanction for the sake of ensuring the greater efficiency of the Royal Military College; and, secondly, because the considerations which may be supposed to recommend each of the following schemes run so imperceptibly into one another that it might be difficult in a short memorandum to analyse and balance their respective merits. The Commissioners are the more inclined to restrict themselves to this simple function, as the various considerations bearing upon the reconstruction of Sandhurst, and especially upon that portion of their original proposal which will be affected by the change, have been fully discussed in their First Report.

With this brief preface they proceed to reply seriatim to the questions appended to the Secretary of State's memorandum.

A. With reference to the Secretary of State's first question, "Whether the prospect of "a free commission should be held out to every cadet admitted to Sandhurst, either by "not absorbing the vacant non-purchase commissions, by buying up purchase commis- "sions, or by any other means?"—the Commissioners are of opinion that it is quite possible to maintain the principle laid down by them by the following means, viz.:—

By purchasing up 60 commissions each year at a first cost of 27,000*l.*, thus supplementing the 40 free commissions already available, and providing 100 free commissions to be given as prizes each year. The course of study in the College being two years, there would always be at least 200 cadets undergoing instruction.

In such case it might be desirable that the whole of the "First Commissions" thus given should be non-saleable.* They would consequently fall in, as casualties occurred, to be used again as prizes; thus in course of time there would be sufficient free commissions available to supply the College with 100 a year, and the outlay would altogether cease. Moreover, it is to be remarked that the 40 free commissions assumed as available for Sandhurst are, under present conditions, saleable after two years' service. The adoption of this proposal would relieve the State from any future liability for the value of such commissions, a liability under the existing system amounting, under certain possible contingencies, to 18,000*l.* a year (*i.e.* $40 \times 450l.$).

B. In reply to the second question of the Secretary of State for War, "Whether it "would be possible to maintain the College at such an establishment as would afford "adequate guarantees for discipline and industry, by holding out to those admitted to it "the prospect of other advantages than a free commission, such as pecuniary prizes on "a graduated scale, prior claims to commissions over candidates examined for direct "appointments, &c.?"—the Commissioners are of opinion that, should such a system as that just defined be judged impracticable on account of the first expense, it would still be possible to carry out their recommendations in a modified manner.

It would be possible, in this second alternative, to add to the 40 free commissions available in each year 46 additional prize commissions, for which cadets lower down on the list might pay only half the usual purchase money, the remaining half being paid by the State. The expense of this measure would, in the first instance, be 10,350*l.* (*i.e.* $46 \times 225l.$), but as it might be stipulated that these commissions should be saleable only for the amounts actually paid by the cadets, similar remarks as to the annual diminution of expense, and the immediate relief from liability, would apply in this as in the first plan.

---

* In making the proposal that a commission obtained without purchase should not be saleable, the Commissioners have looked at the question with a view to its effect upon entrance into the Army alone, and have not considered it to be their province to inquire into its effect upon promotion and retirement.

This proposal would constitute a College of 172 cadets (*i.e.* 86×2), without allowing for any vacancies; but some allowance must necessarily be made for casualties, such as failures, &c.; and partly to meet these, partly to raise the strength of the College to about that originally contemplated by the Commission, it might be desirable to admit a very small addition to the number just calculated. This need not exceed 10 annually. If the number passing out at the final examination should, notwithstanding casualties, be found to exceed the number of prizes originally offered, it might be understood that those lowest in the competition would have no claim to any pecuniary advantage.

It must, moreover, be borne in mind that the Commissioners have in their First Report proposed a reduction in the expenses of maintaining the College, amounting to about 7,000*l.* a year; therefore the increase of expense over the late estimate consequent on this system would scarcely exceed 3,000*l.* in the first year, and would steadily diminish as commissions fell in year by year, until the whole reduction contemplated by the Commissioners' former Report would be effected, and in addition the State relieved from the large contingent liability already referred to.

C. In reply to the third question from the Secretary of State for War, "Whether "the Commissioners have any other mode to suggest for the improvement of the Royal "Military College, supposing their recent recommendation cannot be carried out in its "integrity?"—and also referring to the latter part of the second question—the Commissioners have to state that, even in the event of an objection being made to any additional vote of money towards the maintenance of the College on the principles previously advocated, a third alternative might be proposed under which, although it would not at first hold out the pecuniary inducements to enter the College that are set forward in the two first, nevertheless it would be possible, under an improved organisation, to maintain an establishment of value to the nation without any additional outlay of money, and with the same relief from liability already noticed.

They would propose to take the 40 free commissions a year as prizes, and to add to them 60 purchase commissions, giving the cadets a priority of claim over other candidates, subject, of course, at the outset, to a fair consideration of the claims of those who shall have passed for direct commissions before the re-establishment of Sandhurst. This would provide 100 commissions a year to be obtained through the College, and, the course being two years, there would be 200 cadets.

They would propose that, in this case also, the free commissions should not be saleable: there would be consequently, as commissions fell in year by year, an increased supply, until eventually, if the system were continued, there would be a prize for every cadet passing out of the College.

It would be very important that the number of free commissions given as prizes should be invariably kept up to a certain progressive standard, commencing at 40 a year at least, and increasing gradually as commissions fall in. Any increase in the number to be given should be published at the commencement of the year.

In accordance with their former Report, they would propose, as additional inducements, that cadets reaching a certain standard on passing out of the College should be exempt (except as regards military law) from the Special Army examination about to be instituted; and that those reaching a certain higher standard should be considered eligible as aides-de-camp, without passing any further examination, at any time after the close of their first year's service. Moreover, the preference over other candidates in obtaining a commission, which will be secured to those who successfully pass through the College course, may be expected to furnish a powerful inducement to candidates for commissions to pass through Sandhurst.

They consider these advantages might be so utilised as to prove genuine incentives to industry, and combined with the recommendation made in their First Report, with respect to the system of education and examination, would be sufficient to raise the status of the College to a proper standard.

The Commissioners have thought it unsafe to calculate upon the admission of any Queen's or Indian cadets. At the same time it is probable that a certain moderate number of these would, if permitted to compete, succeed in passing the entrance examination, and thus obtain the benefit of free education within the College. Allowing for a few additional cadets on this footing (who, as regards their commissions, would be borne as supernumeraries), and for casualties, the total strength of the College would slightly exceed the 200 originally designed by the Commission.

PLAN A.—With reference to the foregoing suggestions it may be well to observe that although in the abstract, and if the efficiency of the College alone were to be considered, Plan A. is the one which the Commission would be prepared to indicate as most completely in accordance with their original proposal, yet the annual expense it involves is so considerable that some of their number could not concur in putting it forward as a definite proposition.

PLAN B.—The same economical objection does not apply in anything like equal force to Plan B., and were it necessary for the Commission to declare a decided preference for any one scheme over the others, this is the one which the majority might be inclined to recommend.

PLAN C.—There has been no principle to which the Commission have attached more importance, in connexion with the re-organisation of Sandhurst, than that of securing, by substantial inducements, a *bonâ fide* competition for entrance into the College,—and that merit, as represented by capacity, industry, and good conduct, should never fail of due recognition within its walls. This feeling found expression in their original proposal that to every student who had competed successfully for admission, and who passed with credit through the successive stages of his career, there should be guaranteed a free commission on going out. To effect this object they regulated the number of the students by the number of free commissions at their disposal. The reduction, therefore, in the number of these free commissions, from 100 to 40, unless prevented or supplemented as suggested in Plans A. and B., might be supposed to affect to a corresponding extent one of the influences on which they had relied, both for the supply of desirable candidates and for the future efficiency of the institution. So strongly does this consideration weigh with one of their members, Dr. Butler, that he is compelled emphatically to dissent from the adoption of Plan C., in the belief that the number of free commissions being so seriously reduced, the remaining guarantees for attracting to the College young men of superior ability, and for maintaining among them a high degree of diligence, are insufficient, and that the proposal is too widely inconsistent with the leading principles of the original Report of the Commission.

The other members of the Commission, however, are not disposed to consider that the universality of a pecuniary reward, in the shape of a free commission to each student, was such an essential item in their previous recommendations as to require, in case the suggestion should be found impracticable, the abolition of the College. On the contrary, they believe that the manifold and important changes they have recommended both in the mode of entrance and in the methods of instruction, in the system of discipline, the courses of study, the position of the Governor, and the guarantee of inspection, coupled with the substantial inducements to industry and good behaviour especially noted in Plan C. itself, supply, though not always in a pecuniary form, sufficient securities for a genuine competition for admission, for the subsequent reward of merit, and for the general efficiency of the institution.

Some of their members, indeed, feel this so strongly that they would even prefer the adoption of Plan C. to that of either of the other two, in which the principle of a universal pecuniary reward is maintained; while even those of their number who would regret to see this element in their original plan eliminated or weakened, would, with the exception of the member of the Commission already referred to, find no difficulty in associating themselves with their other colleagues in a unanimous recommendation of Plan C., should the expenses involved in Plan A. and Plan B. be found an insuperable objection.
